

NOTICE OF MEETING

Meeting: PLANNING COMMITTEE

Date and Time: WEDNESDAY, 11 SEPTEMBER 2024, AT 9.00 AM

Place: COUNCIL CHAMBER - APPLETREE COURT, BEAULIEU ROAD, LYNDHURST, SO43 7PA

Enquiries to: Email: karen.wardle@nfdc.gov.uk
Tel: 023 8028 5071

PUBLIC INFORMATION:

This agenda can be viewed online (<https://democracy.newforest.gov.uk>). It can also be made available on audio tape, in Braille and large print.

Members of the public are welcome to attend this meeting. The seating capacity of our Council Chamber public gallery is limited under fire regulations to 22.

Members of the public can watch this meeting live, or the subsequent recording, on the [Council's website](#). Live-streaming and recording of meetings is not a statutory requirement and whilst every endeavour will be made to broadcast our meetings, this cannot be guaranteed. Recordings remain available to view for a minimum of 12 months.

PUBLIC PARTICIPATION:

Members of the public are entitled to speak on individual items on the public agenda in accordance with the Council's [public participation scheme](#). To register to speak please contact Planning Administration on Tel: 023 8028 5345 or E-mail: PlanningCommitteeSpeakers@nfdc.gov.uk

Kate Ryan
Chief Executive

Appletree Court, Lyndhurst, Hampshire. SO43 7PA
www.newforest.gov.uk

AGENDA

NOTE: The Planning Committee will break for lunch around 1.00 p.m.

Apologies

1. MINUTES

To confirm the minutes of the meeting held on 14 August 2024 as a correct record.

2. DECLARATIONS OF INTEREST

To note any declarations of interest made by members in connection with an agenda item. The nature of the interest must also be specified.

Members are asked to discuss any possible interests with Democratic Services prior to the meeting.

3. PLANNING APPLICATIONS FOR COMMITTEE DECISION

To determine the applications set out below:

(a) **SS13 - Land off, Moortown Lane, Ringwood (Application 21/11723) (Pages 5 - 140)**

Hybrid planning application comprising a total of 443 dwellings: Outline planning permission (all matters reserved except access) for residential development of up to 293 dwellings, public open space, ANRG, SuDS, Landscaping, other supporting Infrastructure associated with the development; Full permission for 150 dwellings with means of access from Moortown Lane, associated parking, ANRG, open space, landscaping, and SuDS, other supporting Infrastructure associated with the development. This application is subject to an Environmental Assessment and affect Public Rights of Way.

RECOMMENDED:

Delegated Authority be given to the Service Manager (Development Management) to reconsult Natural England prior to the proposed adoption of the shadow HRA and AA, and to **GRANT PERMISSION** subject to the prior completion of an agreement pursuant to Section 106 of the Town and Country Planning Act to secure the matters set out in the report and the imposition of conditions.

(b) **Open Space adjacent to Crow Lane, Ringwood (Application 23/10707) (Pages 141 - 170)**

The change of use of agricultural land to publicly accessible open space to facilitate Alternative Natural Recreational Green Space ('ANRG'), with associated landscaping, footways and access points

RECOMMENDED:

Delegated Authority be given to the Service Manager Development Management to **GRANT PERMISSION** subject to the completion of a planning

agreement pursuant to a Section 106 of the Town and Country Planning Act to secure the Public Open Space Management and Maintenance framework and the imposition of the conditions set out in the report.

(c) **Land north of Salisbury Rd, Calmore (Application 23/10268) (Pages 171 - 202)**

Reserved Matters Application for the approval of appearance, landscaping, layout, and scale for 269 dwellings, associated and ancillary infrastructure, foul pumping station, play spaces, and sustainable drainage systems pursuant to Outline Planning Permission 20/10997 (AMENDED REASON TO ADVERTISE)

RECOMMENDED:

Delegated Authority be given to the Service Manager Development Management to **GRANT APPROVAL** of the Reserved matters of the layout, scale and appearance of the development and the landscaping of the site (including the detailed access arrangements within the site), specified in condition 3 of outline permission reference number 20/10997, dated 16th January 2023, subject to the completion of a Deed of Variation to the existing Section 106 Agreement to secure public access across the agricultural crossing points (and adjustments to the agreed off-site highway works as referenced in the report) and the imposition of the conditions set out in the report.

(d) **Gang Warily Farm, Newlands Road, Fawley (Application 21/11329) (Pages 203 - 224)**

Construction of 19 affordable dwellings (10 houses and 9 apartments); adjusted vehicular access; associated amenity space and landscaping; demolition of the existing on-site dwelling and associated outbuildings

RECOMMENDED:

Refuse

(e) **4 Westgrove, Fordingbridge (Application 24/10539) (Pages 225 - 234)**

Conversion of attached garage into accommodation ancillary to dwelling with four rooflights

RECOMMENDED:

Grant subject to conditions

Please note, that the planning applications listed above may be considered in a different order at the meeting.

4. MEETING DATES 2025/2026

To agree the following meeting dates for 2025/26 (Wednesdays at 9.00am):

2025

14 May (already agreed)

11 June

9 July
13 August
10 September
8 October
12 November
10 December

2026

14 January
11 February
11 March
8 April
13 May

5. ANY OTHER ITEMS WHICH THE CHAIRMAN DECIDES ARE URGENT

Please note that all planning applications give due consideration to the following matters:

Human Rights

In coming to this recommendation, consideration has been given to the rights set out in Article 8 (Right to respect for private and family life) and Article 1 of the First Protocol (Right to peaceful enjoyment of possessions) of the European Convention on Human Rights.

Equality

The Equality Act 2010 provides protection from discrimination in respect of certain protected characteristics, namely: age, disability, gender reassignment, marriage and civic partnership, pregnancy and maternity, race, religion or beliefs and sex and sexual orientation. It places the Council under a legal duty to have due regard to the advancement of equality in the exercise of its powers including planning powers. The Committee must be mindful of this duty inter alia when determining all planning applications. In particular the Committee must pay due regard to the need to:

- (1) eliminate discrimination, harassment, victimisation and any other conduct that is prohibited by or under the Act;
- (2) advance equality of opportunity between persons who share a relevant protected characteristic and persons who do not share it; and
- (3) foster good relations between persons who share a relevant protected characteristic and persons who do not share it.

To: Councillors:

Christine Ward (Chairman)
Barry Rickman (Vice-Chairman)
Hilary Brand
Kate Crisell
Philip Dowd
Allan Glass
Matthew Hartmann

Councillors:

David Hawkins
Joe Reilly

Phil Woods

Planning Committee 11 September 2024

Application Number: 21/11723 Outline Planning Permission

Site: SS13 - LAND OFF, MOORTOWN LANE, RINGWOOD
(PROPOSED LEGAL AGREEMENT)

Development: Hybrid planning application comprising a total of 443 dwellings: Outline planning permission (all matters reserved except access) for residential development of up to 293 dwellings, public open space, ANRG, SuDS, Landscaping, other supporting Infrastructure associated with the development; Full permission for 150 dwellings with means of access from Moortown Lane, associated parking, ANRG, open space, landscaping, and SuDS, other supporting Infrastructure associated with the development. This application is subject to an Environmental Assessment and affect Public Rights of Way.

Applicant: Crest Nicholson South

Agent: Savills

Target Date: 06/05/2022

Case Officer: Robert Thain

Officer Recommendation: Service Manager - Grant

Reason for Referral to Committee: Application relates to one of the Council's Strategic Sites

1 SUMMARY OF THE MAIN ISSUES

The key issues are:

1. Principle of Development – Local Plan Policy Strategic Site 13: Land at Moortown Lane, Ringwood, Environmental Impact Assessment (EIA), South-West Hampshire Green Belt, Housing Land Supply and NPPF Tilted Balance.
 2. Housing Mix and Affordable Housing.
 3. Highways, Access, Vehicular Parking and Vehicle Charging.
 4. Flood Risk and Drainage.
1. Ecology - Habitat Mitigation and Impact on European Designated Nature Conservation Sites, Phosphates Mitigation, Biodiversity Net Gain and Ecological Reports and Protected Species.
 2. Public Open Space and Landscape - Landscaping and Informal Open Space, Arboriculture, Play Spaces and Formal Open Space, and Alternative Natural Recreational Greenspace.
 3. Design – Density, Scale and Phase 1 Detailed Design.

4. Heritage Assets.
5. Infrastructure and Developer Contributions - s106 Heads of Terms, Community Infrastructure Levy and Impact on local infrastructure.
6. Other Matters - Impact on Residential Amenity, Environmental Health, Sustainable Construction and Design, Mineral Safeguarding and Community Engagement.
7. Response to Ringwood Town Council and Local Objections.
8. Planning Balance and Conclusions.

2 SITE DESCRIPTION

The Local Plan Strategic Site 13 ('SS13') (Land North of Moortown Lane) is located at the southern end of Ringwood. The application site is almost entirely within the allocation site SS13 except for adjacent highway land. The application site comprises approximately 28.63 hectares of land, with two main land parcels bisected by Moortown Lane.

The northern parcel of the application site (approximately 23 hectares) is predominantly arable farmland. The northern parcel is bound partially by existing allotments and Crow Arch Lane to the north; Liberty's Owl, Raptor and Reptile Centre to the east; Moortown Lane to the south, and existing residential dwellings and a petrol filling station to the west. Located to the north-west of the site is Forest Gate Business Park, providing employment, services and facilities within close proximity to the application site. The existing line of residential development along the western edge of the site is arranged in the form of several residential roads which spur from the main highway Christchurch Road. Those properties accessed from Moorland Gate and from Christchurch Road are oriented with their rear elevations and curtilages adjoining the site boundary, with the properties accessed from Willow Drive generally sitting at 90 degrees to it addressing the site on their flank elevations. Crow Lane to the east of the site has a mix of houses, community and commercial properties. There is an existing Public Right of Way (PRoW), Ref. 195/45/1, which runs on a north-south axis through the eastern side of the northern portion of the application site.

The southern parcel of the application site (approximately 4 hectares) is broadly rectangular in shape and currently used as existing playing fields/sports pitches. Remaining parts of the total site area predominantly comprise highways infrastructure. The southern parcel is bound to the north by Moortown Lane, to the east by a single dwelling, to the south in part by existing allotments and sports pitches associated with the Ringwood Town Football Club. To the west the site is bound by Long Lane.

The perimeter boundaries to the north and south of the site are comprised of hedgerow of mixed native species which to an extent curtail views into the site from the adjoining public highways. One exception to this are gaps in the hedge formed by the existing agricultural points of access. The application site is generally level with an approximate elevation of 19 metres. The north-west site boundary is adjacent to off-site mature trees with a preservation order.

3 PROPOSED DEVELOPMENT

The proposal involves the residential-led mixed-use development of part of the Local Plan Allocation Site 13: Land at Moortown Lane, Ringwood. The proposal is submitted as a hybrid planning application with planning permission sought for the following:

- Outline planning permission for the erection of 293 dwellings (C3) with all matters reserved except access; and
- Full planning permission for the erection of 150 dwellings with associated parking, ANRG, open space, landscaping and sustainable drainage systems (SuDS), alongside the creation of a vehicular junction with Moortown Lane, primary and secondary road infrastructure, creation of public footway and offsite highways improvements.

i. Parameter Plans

The application is supported by five revised Parameter Plans which set out:

- Land Use;
- Movement and Access;
- Building Density;
- Building Scale; and
- Landscape.

The Parameter Plans apply to both the Full application area (Phase 1) and the Outline application area (Phase 2). Any subsequent Reserved Matters application for Phase 2 would have to be in reasonable conformity with the approved Parameter Plans.

The Land Use Parameter Plan (Pegasus, 19/1/2024, Ref: P21-1078-DE_004-0107 Rev. A) sets out the distribution of the main land uses including residential development, public open space and highways land within the application site. The Land Use Parameter Plan also confirms the main highways routes including the internal road linking the two residential parcels and roads up to the application site boundaries with residual land within the Local Plan Site Allocation.

The Movement and Access Parameter Plan (Pegasus, 19/1/2024, Ref: P21-1078-DE-004-0108 Rev. A) sets out the primary and secondary routes, public rights of way, access and crossing points and vehicular access.

The Building Density Parameter Plan (Pegasus, 19/1/2024, Ref: P21-1078-DE-004-0109 Rev. A) sets out the areas of the proposed higher and lower density across both proposed development phases. The Design and Access Statement (May 2024) sets out that the higher built densities of 35 to 45 dwellings per hectare are located in the centre of the larger housing area and all of the smaller housing area and that lower densities of 25 to 35 dwellings per hectare are on the western, outhern and eastern boundaries of the larger housing area.

The Building Scale Parameter Plan (Pegasus, 19/1/2024, Ref: P21-1078-DE-004-0110 Rev. A) sets out that the application site development parcels will predominantly be for residential buildings (houses and flatted blocks) of either 2 or 2.5 storeys. An exception is the small central core of the larger development parcel (which is split between the Full and Outline elements of the application) which is identified for residential buildings of up to 3 storeys.

The Landscape Parameter Plan (Pegasus, 19/1/2024, Ref: P21-1078-DE-004-0112 Rev. B) sets out the siting of public open space including ANRG, informal open space and play areas.

ii. Phase 1: Detailed Design

The proposal is supported by a Design and Access Statement (DAS) (Pegasus, May 2024) which sets out a detailed summary of Phase 1 of the proposal. The overall Phase 1 housing and public open design is set out in the Phase 1 Masterplan (Pegasus, 27/3/2024, Ref: P21-1078-DE-003-0101-C).

a. Housing Mix

The proposal (Housing Tenure Plan and Design & Access Statement) sets out that the mix for the residential typologies, sizes and details of tenure arrangements for Phase 1 is as proposed in the table below. This includes the delivery of 150 dwellings of which 75 dwellings are affordable housing (social rented, affordable rented and shared ownership) forming 50% of the overall Phase 1 dwellings.

Table 1: Phase 1 Housing Mix

Tenure and Typology	Market	Social Rented (AH)	Affordable Rented (AH)	Shared Ownership (AH)	Total
1 bed flat	0	7	5	0	12
2 bed house	15	11	11	11	48
3 bed house	23	6	10	9	48
4+ bed house	37	2	0	3	42
Total	75	26	26	23	150

b. Access and Movement

Vehicular access to the site will be from Moortown Lane in the form of a priority junction which will include a new pedestrian and cycle crossing to the land south of Moortown Lane. This junction will be delivered as part of Phase 1 and has been designed to accommodate buses and will lead to the principal streets within the proposed development. The key features of the proposed principal site access are as follows:

- A priority junction;
- 3m shared footway / cycleway on the eastern side of the carriageway;
- New “SLOW” road markings on approach to the junction;
- 2.4m x 48m visibility splays in either direction along Moortown Lane; and
- A pedestrian and cycle crossing of Moortown Lane to the land south of Moortown Lane

The proposed development will ensure future vehicle access can be provided to Crow Lane (in the east) and Wellworthy Way (to the north) by delivering a series of connecting roads between Moortown Lane and the edge of the application site land ownership. The DAS sets out that the spine roads will be built to an adoptable standard and offered for adoption to Hampshire County Council (HCC). The extent of the highway adoption will be contiguous with the site boundary and the precise design and alignment of the connecting roads and the point they reach the adjoining land can be agreed to the satisfaction of HCC and NFDC such that they can connect with new roads in the adjoining part of the allocation when that comes forward for development.

The internal layout has been designed in line with the national guidance set out in Manual for Streets. It includes both dedicated footways and shared surfaces. A set of pedestrian and cycle accesses are provided to Moortown Lane and to Crow Arch Lane. The primary street is configured as a 6.75m carriageway to accommodate a bus route, a 3m wide cycle way on one side and a 2m wide footway on the other.

The secondary street network seeks to provide an integrated walkable neighbourhood that could give users of different modes of transport a choice of different routes.

The proposed pedestrian and cycle accesses include:

- A centrally located southern pedestrian and cycle access to the land south of Moortown Lane;
- A south-western pedestrian and cycle access to Moortown Lane close to Christchurch Road including a new length of footway on Moortown Lane to connect to Christchurch Road;
- An eastern pedestrian access to Moortown Lane at the southern end of Footpath 45;
- A northern pedestrian and cycle access to Crow Arch Lane to enable a link to be provided to the public open space north of Crow Arch Lane, onwards to local facilities and ultimately to the Castleman Trail pedestrian and cycle route;
- A further northern pedestrian connection to the allotments on Crow Arch Lane; and Access to the existing Public Right of Way (PROW) footpath 45 walking route from Moortown Lane to the public open spaceland to the north of Crow Arch Lane.

c. Street Hierarchy

A hierarchy of streets is proposed with variation in the street types which seeks to assist in the creation of a legible and permeable development, whilst also providing for, and encouraging pedestrian and cycle movement, and delivering necessary vehicular connections.

The DAS sets out that the development and internal road network will be designed to encourage low vehicular speeds and streets will be defined by the building layout, so that buildings and spaces, instead of roads, dominate the street scene. The design will promote safe walking and high permeability through the site and aims to limit the potential for anti-social behaviour.

Within the site, the primary street will provide the main vehicular access route into the development from Moortown Lane at the south to the two future vehicular access points along the site's northern edge. The primary street is configured as a 6.75m carriageway to accommodate a bus route, a 3m wide cycle way on one side and a 2m wide footway on the other. The route seeks to increase the permeability of the development and enables easy access to dwellings from the primary access point.

A network of secondary routes off the principal street throughout the site has the aim of promoting enhanced connectivity. Tertiary routes and shared surface streets extend out of the secondary movement corridors, which in turn provide access to private drives, facilitating a clear street hierarchy, which aids site-legibility.

d. Parking and Cycle Storage

The DAS sets out that the Phase 1 vehicular parking is proposed to be designed in line with the current guidance contained within Manual for Streets and the NFDC

Parking Standards SPD (April 2022). Allocated parking will predominantly be provided on plot, within the curtilage, either to the front or side of dwellings, with individual bays and/or garages set back from the building line, to allow ease of access to dwellings. Garages are provided at a minimum size of 3m x 6m for a single garage and 6m x 6m for a twin garage, to allow sufficient space to accommodate a car.

Cycle parking spaces are provided either within the curtilage of the dwelling, within a garage if available, or within a secure store in the rear garden. Electric vehicle charging will also be provided so that one charging unit is supplied for each dwelling that has on-plot parking. For plots where parking is more remote, ducting will be provided to allow for future connection.

e. Design

The DAS sets out that the design of the development proposals is broadly based on the principle of continuity and enclosure, where perimeter blocks provide a strong frontage to the public realm whilst protecting the amenity of existing residents. The proposal seeks to promote an active street scene and provide frontage and surveillance over public open space.

The majority of the proposed residential dwellings, including the flatted blocks, are 2 storeys in height, with the occasional use of 2.5 storey buildings. There are two 3 storey townhouses in Phase 1. The western and south-western sections of Phase 1 will be predominantly 2-storeys in height, with occasional use of 2.5 storey units and the northern edge of Phase 1 that will overlook the proposed central green space will be up to 3 storeys.

The DAS sets out that variety in the heights and massing of the residential buildings will be achieved through a range of house types and sizes, ranging from 2 and 3 bedroom terraced and semi-detached dwellings, through to larger 4 and 5-bedroom detached houses. The DAS sets out that development will achieve an average density of 38 dwellings per hectare (dph).

Three distinct character areas are proposed for Phase 1. The first character area ('Crow Gardens') comprises built form at the perimeter of the development, at the interface between the proposed dwellings and the public open space. Plots in this area are generally larger, with mainly large, detached family houses, which are facing and defining the proposed public open space and Moortown Lane. The second character area ('Crow Boulevard') is set along the principal vehicular route of the development, arranged in a broadly linear form along this street from Moortown Lane at the south to the site's northern edge. Being the main access route within the development, this character area incorporates a formal appearance, featuring a combination of, flats, detached and semi-detached plots with a consistent building line. The third character area ('Moortown Suburbs') forms the main part of the development and set in the inner, central areas of the proposed built-up area. It incorporates a mix of mainly semi-detached and terraced dwellings.

f. Public Open Space

The application is supported by a Landscape Masterplan and Alternative Natural Recreational Greenspace (ANRG) Strategy and Open Space Strategy. The Phase 1 Public Open Space (POS) comprises:

- An informal green edge to the north of Moortown Lane;
- A more formal pocket park, public open space and smaller informal spaces in the housing area;

- 4.37 ha of Alternative Natural Recreational Greenspace (ANRG) sited on a north-south axis in the centre of the application site.
- Two large play areas immediately to the east of the Phase 1 housing comprising a Neighbourhood Equipped Area for Play (NEAP) – a play space for older children – and a Local Equipment Area for Play (LEAP) – a play space for younger children.
- A set of large infiltration swales to accommodate surface water drainage.

iii. Supporting Information

The application is also supported by a comprehensive suite of supplementary reports including the following (latest iteration set out):

- Planning Statement, Savills, December 2021
- Design and Access Statement, Pegasus, May 2024
- Appendix 8.3 Shadow Habitats Regulation Assessment (SHRA), edp, May 2024
- Drainage Strategy Addendum, 27 March 2024, Hydrock
- Biodiversity Net Gain Assessment, edp, January 2024
- Reptile Mitigation Strategy, edp, February 2024
- Ecological Baseline, edp, January 2024
- Green Infrastructure Strategy, edp, January 2024
- Addendum Agricultural Note, edp, January 2024
- Landscape and Ecological Management Plan, edp, January 2024
- Transport Information Update Parts 1 and 2, I-Transport, January 2024
- Highways and Transport Update Parts 1 to 11, I-Transport, April 2023

Neighbourhood Plan

The Ringwood Neighbourhood Development Plan (RNP) was adopted by NFDC on 8 July 2024. A report was taken to NFDC Cabinet on 1 May 2024 which sought approval for the modifications recommended by the Examiner of the Ringwood Neighbourhood Development Plan and agreement that the Neighbourhood Development Plan can proceed to a local referendum. The referendum was held on 4 July 2024. The local Ringwood community was asked whether they supported the Neighbourhood Plan, in a referendum on 4 July 2024. A majority (83.2%) of those voting in the referendum voted in favour of the Plan (on a turnout of 58.9%).

In accordance with the Neighbourhood Planning (General) Regulations 2012 (as amended), the Ringwood Neighbourhood Plan was 'made' (adopted) by New Forest District Council on 8 July 2024. Now made, the Neighbourhood Plan forms part of the statutory development plan for Ringwood parish within New Forest District Council area.

There are eleven policies within the adopted Ringwood Neighbourhood Development Plan (listed below):

- R1: A Spatial Plan for Ringwood
- R2: Maintaining a Successful and Prosperous Town Centre
- R3: Making Better Use of Opportunity Areas in the Town Centre
- R4: Shops and Parades Within and Outside Defined Local Centres
- R5: Smaller Housing
- R6: First Homes
- R7: The Ringwood Design Code
- R8: Building for a Healthy Life
- R9: Creating a Green Infrastructure and Nature Recovery Network
- R10: Zero Carbon Buildings
- R11: Encouraging Active and Healthy Travel

Adopted Ringwood Neighbourhood Development Plan policies R1, R5, R6, R7, R8, R9, R10, and R11 are considered relevant to this proposal and as such are addressed under each relevant sub-section of the Planning Assessment in the Committee Report.

The adopted Ringwood Neighbourhood Development Plan also includes several appendices. Appendix A (Ringwood Strategic Masterplan) relates only to Policy R3 and the town centre. Appendix B (Ringwood Design Guidance and Code, November 2022) seeks to amplify Policy R7 and hence there is a duty to have regard to these documents in line with the NFDC May 2024 Cabinet Report. Reference has been made to Appendix B in the Planning Assessment where relevant. Appendix C is the NFDC Local Distinctiveness SPD and hence is already a material consideration.

6 PARISH / TOWN COUNCIL COMMENTS

Ringwood Town Council

Comments were received from Ringwood Town Council (RTC) in April 2022, February 2024, May 2024, June 2024 and July 2024. The comments are reproduced in full for Members of the Committee in the report. For reference, the July 2024 comments from Ringwood Town Council were received after the agenda was published for July 2024 NFDC Planning Committee but before the item was withdrawn from consideration at July 2024 NFDC Planning Committee.

July 2024

Three minutes is hardly sufficient to respond to even the simplest application that the Town Council objects to let alone one such as this involving over 400 potential dwellings. Life is not made easier by having only a week's notice of the Officer's report which raises new issues not anticipated nor addressed in previous submissions. Hence this written response but please note that the "three minutes" does not include time taken to answer questions from members which we invite so that we can clarify matters of concern. Nothing herein is intended to detract in any way from previous observations but rather, to address matters raised by the Officer.

NFDC (in common with the vast majority of planning authorities) is under pressure to approve planning applications for new housing and is rightly concerned about the risk of being challenged on an appeal against refusal and the potential costs of both defending the appeal and the risk of having to pay costs should an appeal succeed. However, that is not a good enough reason to simply approve applications that are not "policy compliant". It is the Town Council's submission that the Officer's reports do not have proper regard to policies now in place (in particular the now adopted Ringwood Neighbourhood Plan) and that to grant permission on the basis recommended would itself expose the Council to the risk of a successful challenge at Judicial review with all that would entail in terms of costs, this on the basis that the incorrect test is being applied with regard to the Neighbourhood Plan and the application of the policies therein.

We therefore invite the Planning Committee to either refuse the application (on the basis that it is not compliant with current policies) or to defer consideration of the application pending an updated/revised report from Officers which properly takes into account the Neighbourhood Plan and amends its recommendations accordingly.

The status of Ringwood's Neighbourhood Plan ("the NP") The Officer's report is both "out of date", factually and legally incorrect, not least because the officer seems to be referring to an earlier version of the plan which had 12 policies, rather than the 11 that were eventually included. References in the report to the NP policies R9 – R12 are therefore incorrect. The NP did not simply pass the Inspector's examination but was approved at referendum (with over 83% voting in favour) and is scheduled to be adopted by NFDC on 8th June 2024 – this is a mere formality and the NP is now a relevant policy. Nothing in it is contrary to NFDC's own policies – had that been the case, it would not have passed examination, let alone been approved by NFDC.

Policy issues regarding the NP

The application is non-compliant in a number of significant respects, including the following:

NP Policy R6 – First Homes. The application does not include any "First Homes". Had it done so, our view is that any viability assessment (see further below) would

have demonstrated that the inclusion of “First Homes” would have made the proposed development more (rather than less) viable. This is important to Ringwood given the number of young local residents who are being “priced out of the market”.

The Officer has seemingly chosen to give greater weight to the NFDC First Homes Advice Note than to the NP policy. This with respect, is wrong.

RNP Policy R8 – “Building for a Healthy Life Assessment” The report wrongly asserts that “there is no requirement on the part of an applicant to undertake a “Building for a Healthy Life Assessment”. It correctly asserts that “it is not on the list of required documents on the NFDC validation checklist”. The adoption of the NP makes it a policy requirement within the NP plan area to produce such an assessment.

That said, the applicant has purported to undertake such an assessment and that has all areas marked in green. The officer has noted that several of the amber assessments in the RTC analysis of the assessment (sections 5, 6 and 7 on pages 81 and 82) are “valid design comments” but does not then question (on page 85) the applicant’s assessment – this is somewhat inconsistent.

NP Policy R10 (wrongly referred to in the Officer’s Report as R11). The Officer (on page 95) states that it appears to go beyond the recently adopted Climate Change SPD adopted by NFDC.

With respect, that is entirely the point of a Neighbourhood Plan – it provides additional policies applicable to the plan area. It is suggested that implementation may affect viability but there is no evidence to back that up and indeed the applicant’s own Annual Integrated Report 2021 states that its new house types “give a higher energy efficiency at a 9% lower build cost yet the proposal is that the houses will be built only to current Building Regulation requirements.

Policy issues regarding the Local Plan

Site access when the Local Plan was subjected to a Public Enquiry, the then proponents of the scheme to develop “Site 13” (i.e. the present application site) argued strongly that the access route to the north-west of the site (into the “Wellworthy site” should not be included as it was a “ransom strip” that might curtail future development. The Inspector(s) disagreed.

This site will simply not work without the additional vehicular access point in the North and to the East (or North-East) and the policy aim of creating a route from the A31 through site 12, along the Ring 3 Development (Beaumont Park), through this site (13) and to the Christchurch Road (thereby avoiding the already congested Town centre) is defeated.

Vehicular access to schools from the site and indeed to even the nearest supermarket is substantially longer (contrary to policies aimed at Climate Change and others) and there is no guarantee whatsoever that these additional access points will ever be delivered in future. The applicant has not disclosed any detail as to any negotiations that may have taken place with Hampshire County Council nor other relevant landowners that demonstrates that the provision of these additional access points is undeliverable.

The proposal that development should be permitted before any improvement works are undertaken to Moortown Lane and its junction with Christchurch Road is frankly and simply unacceptable – it is not sufficient that “the site access and Crow Arch

Lane pedestrian/cycle access to the north will be delivered prior to first occupation in Phase1” (my emphasis).

We have not been provided with any detailed costings for these works; we are not satisfied that the proposed works are even achievable and it is in our view quite wrong that such matters have not been resolved in conjunction with the detailed consent sought in respect of Phase 1 of the development. (Please also see further below under “financial contributions”).

Further and in terms of Pedestrian and Cycle links, the assertion (on page 58/59 of the (note: the withdrawn July 2024 Planning Committee) Officer’s report that “the proposed cycle and walking links mean that the proposal broadly accords with the post-examination RNP (now the ADOPTED NP) is factually incorrect – the proposals breach the NP Policy R1 criterion D.

Please also have regard to the detailed (and negative comments) under the section “South-West Hampshire Green Belt” e.g. (in the context of Moortown Lane) “Overall, a very high magnitude of change is expected as a result of Phase 1 and the wider site, resulting in a major/moderate adverse level of effect”, with reference to Year 1 “this change will be stark and with mitigation planting not matured the change is anticipated to remain very high” and even at Year 15 “in this context the change anticipated is marginally reduced by year 15 to high, but still considered to be at a major/moderate (and significant) level of effect”.

ANRG

The proposal is only compliant with policy if the land north of Crow Lane is included as ANRG. This is both artificial and inappropriate, not least given its remoteness from the proposed housing. Although the access link from the “main site” has been altered to form part of the Castleman Way, this does not resolve the issues.

Affordable Housing

As admitted by the applicant, the overall proposal is contrary to the policy that 50% of the proposed dwellings should be affordable but it is asserted that this is acceptable on the basis of viability.

We note that the viability assessment does not take into account any “First Homes”, contrary to the now adopted Policy R6 of the NP. The Town Council has provided evidence that the inclusion of First Homes in fact makes a development proposal more viable than exclusion of the same.

That said, we (RTC) lack the technical knowledge and resource to challenge the viability assessments but one thing is crystal clear – as time passes, circumstances change. Building costs may go up as well as down and more to the point, the selling prices of housing may also change dramatically – if prices rise, the developer’s profits will increase.

Particularly with regard to the outline application for Phase 2 of the proposal, if NFDC were to agree at this stage that 30% affordable was acceptable, there would only be one direction in which that could go, namely down. If, on the other hand, NFDC were to maintain its policy line of 50% affordable (and to require that a proportion of those be First Homes), there would be nothing to prevent the developer from undertaking a further viability assessment when a detailed application is submitted and the position could then be re-appraised in the light of circumstances as they then are.

We therefore strongly urge the Committee not to accede to the recommendation that 30% affordable housing is acceptable at this stage.

NFDC Environmental Design

This is probably the strongest single objection from NFDC officers and, if anything, goes further than RTC's observations. It is clear that on design grounds, the proposals are "contrary to Local Plan Policies ENV3 and STR1 (ii) This is a clear ground for refusal and the applicant has made little or no effort to address these very valid objections.

Financial contributions

We note the proposed contribution of £1,040,588 towards "walking and cycling improvements on Christchurch Road...." etc but there seems to be no costing with regard to the widening of Moortown Lane – simply that "monitoring of Moortown Lane through the first phase of development to determine whether widening is necessary" – RTC's view (give our local knowledge) is that such widening is absolutely essential. It appears that HCC agrees –note that under 10.3 – Highways, Access and Parking at (i. Site Vehicular Access) it is asserted that "HCC consider that the widening of Moortown lane is necessary....." and that "the applicant has agreed to implement these improvements to Moortown Lane and will be secured through a s106 obligation" but no costing has been provided other than a "contribution of £69,000 for surfacing improvements to be undertaken on the length of Ringwood Bridleway 509 between Crowe Hill and Barrack Lane (to the south-east of the application site) which is part of the wider Castleman Trail." We similarly note a total contribution of £2,465,274 to the Local Education Authority but only in relation to primary age children and with no information as to how and where that money might be spent. We also note £48,287 in respect of Air Quality Monitoring Contribution and £383,150 for habitat mitigation, the £110,000 "off-site contribution" for formal public open space (playing pitches and infrastructure) and £192,700 for "community facility contribution".

Conclusion

This is all about "tilted balance". Whilst it is acknowledged that NFDC is falling short in terms of housing allocation, the lack of "First Homes" and the failure to achieve 30% affordable housing is a real issue. The proposal fails to meet key policies in the now adopted Ringwood Neighbourhood Plan and also falls short of compliance with the Local Plan, not least through access to Christchurch Road. To quote "the proposed development is not outstanding or innovative in line with NPPF paragraph 139 criterion (b). The proposed financial contributions are not sufficient to mitigate the harm that will be caused (not least the absence of costings or contributions to improve Moortown Lane). It is not good enough to say "the proposal is considered to be generally in line with local and national policy and guidance" – it needs to be compliant and this proposal is not. Further, compliance with policy requirements regarding ANRG is dependent on the grant of application 23/10707. Both applications should therefore be refused or, at the very least deferred until the issues herein are resolved to the satisfaction of members and not left to Officers to determine under delegated powers.

June 2024

The assessment indicates that the provision of 30% affordable housing makes the site viable. However, no information has been provided to explain why the 50% policy requirement is not achievable.

There are several inaccuracies and contradictions in the applicant's Viability Assessment. Perhaps the most glaringly obvious is in Table 4.11.1 of the BNP Paribas (BNP) assessment dated December 2023, where ~£2M is missing. Such errors cast doubt on the accuracy of other figures in the report and whether it was seriously reviewed by Crest-Nicholson (C-N). It is clear from the Dixon Searle Partnership (DSP) review dated May 2024 and related documents, such as the construction cost review by ERM dated 13th February 2024, that a number of other figures in the BNP assessment have been questioned and extra information requested, suggesting that NFDC consultants are far from comfortable with them.

It is also concerning to this Council that the C-N cost plan summary from 17th August 2022 (in ERM document, Appendix 2), quote, "contained insufficient detail to carry out meaningful review". If C-N have underestimated the costs, not due to unpredictable variations or abnormalities, but due to a lack of due diligence, the fault should not be put at the door of affordable housing provision.

It is difficult for a layperson, or even a councillor on the NFDC Planning Committee, to understand the figures as presented. It would be beneficial if the summary spreadsheet tables followed a standardised format as an NFDC reporting requirement.

The emerging Ringwood Neighbourhood Plan includes a policy (R6) requiring a minimum of 25% of new affordable homes to be First Homes. No First Homes have been provided for by the applicant, and there is no mention of them in either report. Given that the developer would receive an additional income of several million pounds sterling from this provision, which would have a positive impact on the viability, we question why this has not been challenged by NFDC.

We are pleased to see the applicant has now provided a Building for a Healthy Life (BfHL) assessment, as required by Policy R8 in the Ringwood Neighbourhood Plan. However, with every element scoring a green light, this is contrary to the assessment carried out by the Town Council and at odds with comments made by NFDC's landscape and environmental design officers. We suggest that the applicant's assessment is far from impartial and should be challenged. Perhaps an independent assessment could be sought by NFDC, someone that is an expert in the field, such as David Birkbeck, who carried out a review of the Rendlesham scheme (DC 19/1499/FUL) for East Suffolk Council and is a co-author of BfHL.

May 2024

This is Ringwood Town Council's further response to planning application 21/11723, agreed by Full Council on 28 February 2024 and amended on 3 May 2024. It follows the Council's original response made in April 2022. We have considered the amended plans and further documents, note the amendments and that the Ringwood Neighbourhood Plan is scheduled to go to a referendum in July 2024 and it should accordingly be given significant weight.

We remain of the strong view that the application should be refused (R4). We have not had sight of the Officer's report and note that some requested documentation and responses from several statutory consultees are outstanding even now. We therefore reserve the right to make further comments in respect of any additional information received relating to this application.

Given the vast number of documents relating to this application, we have endeavoured to address only our principal concerns and not matters of detail. We will be represented at the NFDC Planning Committee when the application is

considered and invite members to ask questions to clarify any matter not specifically addressed.

Vehicular Site Access

The issue of site access is not a reserved matter. The proposal is contrary to the policy set out for SS13 in the Local Plan, specifically because the only access will be from Moortown Lane – as the name suggests, a lane along which two Heavy Goods Vehicles cannot pass. At the Public Inquiry into the current Local Plan, the Inspector was specifically invited to exclude an access into this site from the north-west corner but declined to do so.

The land in question is under the control of HCC and designated as an employment site, although no application has been forthcoming. It appears that the applicant has failed to reach any agreement with HCC that would allow construction of this access, let alone any access onto Crow Lane. The argument will no doubt be that the application should not be refused “simply because” the applicant has failed to secure these agreements but the outcome will be that all vehicular traffic will need to access and egress the site via Moortown Lane.

This is a fundamental issue. It is unrealistic to suppose that all residents living on this site will walk or cycle to take their children to school or to do their shopping.

The proposed “improvements” to the junction with Christchurch Road and elsewhere could only be “secured” by a financial contribution under a S106 agreement but that does by no means guarantee they will be delivered. For example, when consent was granted for the Lidl store on Forest Gate Business Park, this included a s.106 agreement for a contribution towards a pedestrian crossing. It transpired that the contribution was woefully inadequate and no controlled crossing was ever built (let alone a “Toucan crossing” as is now proposed). There are similar examples relating to the Beaumont Park estate, with two key footpaths as yet undelivered. Further, previous applications have demonstrated that “improvements” to other junctions are not practically feasible. Having reviewed the latest comments from HCC Highways and the Schedule of Highway Works, we note with considerable dismay and concern that it is now proposed there be no requirement to complete any of the highway improvements before the first occupation of dwellings in Phase 2. If consent is granted, we would request a condition that all proposed highway improvements be implemented before occupation of any proposed dwelling.

Pedestrian and cycle access

Again, the applicant has failed to secure the necessary consents to ensure compliance with policy requirements to (for example) provide reasonably accessible links to local schools (Poulner Infant and Junior Schools in particular) but also to local shops – e.g. Lidl on Forest Gate Business Park. (Note – there was an indication in one of the applicant’s transport documents that the Poulner schools were no longer to be treated as catchment for this site, but that information could not be verified.)

The proposals for the junction with and then crossings across Christchurch Road are simply not practical nor achievable.

Other pedestrian routes from the north and east of the site are not properly defined. Policy R1 (Clause D) of the Ringwood Neighbourhood Plan states: “The harmful effects of traffic congestion, especially traffic with an origin and destination outside the town centre, will be tackled through the promotion of other means of moving about the town including the delivery of effective walking and cycling measures to better connect the new communities at Moortown Lane and Hightown Road.”

There is no clear means by which this policy will be met; there is no connection from the north of the site to Wellworthy Way and the proposed connection to Christchurch Road to the South of the site does not appear to be suitable for walking or cycling and requires crossing the increasingly busy Christchurch Road.

Housing

Whilst the commitment to 50% affordable housing is welcomed, the proposed mix of housing, both affordable and otherwise, is not policy compliant. The proportion of 1 and 2 bedroom dwellings for the first phase is 40% (60 of the 150 dwellings). This is not in accordance with Policy R5 of the Ringwood Neighbourhood Plan (RNP), which states that the figure is greater than 50% of schemes of five or more dwellings. There are no First Homes proposed in Phase 1, contrary to Policy R6 of the RNP, which requires that a minimum of 25% of new affordable homes shall be provided as First Homes.

Policy R11 of the RNP requires that “wherever feasible, all buildings should be certified to a Passivhaus or equivalent standard with a space heating demand of less than 15KWh/m²/year. Whilst we are encouraged by the potential for inclusion of PV panels we note there is no definite commitment at this stage to comply with this requirement.

However, we note with concern that the overall proposal now provides for only 30% of the units as affordable housing due to issues of viability. No viability assessment is available on the portal, but this significant change makes the outline proposal contrary to policy.

Design Issues

The Town Council’s view is that the proposed development (particularly regarding the detailed application) is unacceptable. We refer here to the observations of the Urban Design Officer regarding numerous aspects not least “street scenes”, the density of the proposals which are far too high for an “urban edge development” which has hitherto been Green Belt land.

There is a great deal wrong with the proposals but to cite but one example, please consider the western edge of the proposed development. The existing dwellings (which are quite substantial properties that, thanks to the topography sit considerably lower than the ground level of the development site). They would not only be overlooked by the proposed housing but the proposed style of houses along this edge would be entirely out of keeping with the immediate locality. There appears to have been no consideration of how existing power cables will be accessed nor the effect on drainage.

We have little doubt that if the application here was to build a single dwelling (let alone a dozen or so) backing on to the existing properties, considerable concerns would have been raised about “overlooking/loss of privacy” and “loss of amenity”.

There should in our view be a clear “gap” and “green space” between the existing dwellings any proposed new housing. Paragraph 139 of the NPPF states that “development that is not well designed should be refused”.

The applicant has not submitted a Building for a Healthy Life assessment, as required by Policy R8 of the Ringwood Neighbourhood Plan. In the absence of this, the Town Council and members of the RNP team have undertaken a BfHL assessment, which forms part of the Town Council’s response –

this is the same as that submitted in February as there has been little change in the design), which indicates the development is not well designed. On that basis, the application should be refused.

Density

The Local Plan envisaged a minimum of 480 dwellings on the total strategic site but this was on the basis that land south of Moortown Lane would form part of the allocation. This is no longer the case and the consequence is a significant increase in density, which is not appropriate in this location on the edge of the Green Belt.

“Open Spaces – ANRG etc.”

The Town Council welcomes the exclusion of the “Ten Acre Field” in the applicant’s strategy. However, the proposal to include land adjacent to Crow Lane as part of its proposal is simply wrong (please refer to the Council’s comments on planning application 23/10707) and for the purpose of this application should be ignored. The application is not compliant with policy and for this reason alone should be refused.

Drainage

The applicant appears not to have considered properly how water currently drains from the site nor the effect of its proposals on adjoining properties. Much further investigation needs to be undertaken in this regard. Hampshire County Council, as the Lead Local Flood Authority, requested specific information in their original response dated 28/01/2022. They responded further on 20/06/2023 stating that information on infiltration testing and groundwater monitoring to support the drainage strategy had still not been provided. The most recent response dated 05/02/2024 states that this information remains outstanding. Given the increased level of flooding in the area, it is of great concern that the applicant has failed to provide the required information and to demonstrate an adequate drainage strategy for the site. There is an opportunity to bring back into use the currently redundant Moortown Lane Flood Relief Drain if this development proceeds. We would welcome a conversation with HCC as the Local Lead Flood Authority and the applicant as to how this might be achieved.

Conclusion

The Town Council recognises that, both nationally and locally, there is a housing shortage, particularly for younger people who find it difficult to the point of impossibility to step on to the “housing ladder”. We also appreciate the pressure on the Planning Authority as it is not currently meeting its targets for both building new dwellings or affordable housing, and that it does not currently meet its 5- year supply of land allocated for housing. However, there are yet again so many issues with the present application, both outline and detailed, that we urge that the application be refused and the applicant be in effect invited to go back to the drawing board.

February 2024

Summary

This is Ringwood Town Council’s further response to planning application 21/11723, agreed by Full Council on 28 February 2024. It follows the Council’s original response from April 2022, a copy of which is attached for ease of reference. We have considered the amended plans and further documents, note the amendments and that the Examiner’s final report on the Ringwood Neighborhood Plan has now been received and it should accordingly be given weight. We remain of the strong

view that the application should be refused (R4). We have not had sight of the Officer's report and note that some requested documentation and responses from several statutory consultees are outstanding. We therefore reserve the right to make further comments in respect of any additional information received relating to this application. Given the vast number of documents relating to this application, we have endeavoured to address only our principal concerns and not matters of detail. We will be represented at the NFDC Planning Committee when the application is considered and invite members to ask questions to clarify any matter not specifically addressed.

Vehicular Site Access

The issue of site access is not a reserved matter. The proposal is contrary to the policy set out for SS13 in the Local Plan, specifically because the only access will be from Moortown Lane – as the name suggests, a lane along which two Heavy Goods Vehicles cannot pass. At the Public Inquiry into the current Local Plan, the Inspector was specifically invited to exclude an access into this site from the north-west corner but declined to do so. The land in question is under the control of HCC and designated as an employment site, although no application has been forthcoming. It appears that the applicant has failed to reach any agreement with HCC that would allow construction of this access, let alone any access onto Crow Lane. The argument will no doubt be that the application should not be refused “simply because” the applicant has failed to secure these agreements but the outcome will be that all vehicular traffic will need to access and egress the site via Moortown Lane.

This is a fundamental issue. It is unrealistic to suppose that all residents living on this site will walk or cycle to take their children to school or to do their shopping. The proposed “improvements” to the junction with Christchurch Road and elsewhere could only be “secured” by a financial contribution under a s.106 agreement but that does by no means guarantee they will be delivered. For example, when consent was granted for the Lidl store on Forest Gate Business Park, this included a s.106 agreement for a contribution towards a pedestrian crossing. It transpired that the contribution was woefully inadequate and no controlled crossing was ever built (let alone a “Toucan crossing” as is now proposed). There are similar examples relating to the Beaumont Park estate, with two key footpaths as yet undelivered. Further, previous applications have demonstrated that “improvements” to other junctions are not practically feasible. If consent is granted, we would request a condition that ALL proposed highway improvements be implemented before occupation of ANY proposed dwelling.

Pedestrian and cycle access Again, the applicant has failed to secure the necessary consents to ensure compliance with policy requirements to (for example) provide reasonably accessible links to local schools (Poulner Infant and Junior Schools in particular) but also to local shops – e.g. Lidl on Forest Gate Business Park. (Note – there was an indication in one of the applicant's transport documents that the Poulner schools were no longer to be treated as catchment for this site, but that information could not be verified.) The proposals for the junction with and then crossings across Christchurch Road are simply not practical nor achievable. Other pedestrian routes from the north and east of the site are not properly defined. Policy R1 (Clause D) of the emerging Ringwood Neighbourhood Plan states: “The harmful effects of traffic congestion, especially traffic with an origin and destination outside the town centre, will be tackled through the promotion of other means of moving about the town including the delivery of effective walking and cycling measures to better connect the new communities at Moortown Lane and Hightown Road.” There is no clear means by which this policy will be met; there is no connection from the north of the site to Wellworthy Way and the proposed connection to Christchurch

Road to the South of the site does not appear to be suitable for walking or cycling and requires crossing the increasingly busy Christchurch Road.

Housing

We echo (without repeating) the observations of officers that whilst the commitment to 50% affordable housing is welcomed, the proposed mix of housing, both affordable and otherwise, is not policy compliant. The proportion of 1 and 2 bedroom dwellings for the first phase is 40% (60 of the 150 dwellings). This is not in accordance with Policy R5 of the emerging Ringwood Neighbourhood Plan (RNP), which states that the figure is greater than 50% of schemes of five or more dwellings.

There are no First Homes proposed in Phase 1, contrary to Policy R6 of the emerging RNP, which requires that a minimum of 25% of new affordable homes shall be provided as First Homes. Policy R11 of the emerging RNP requires that “wherever feasible, all buildings should be certified to a Passivhaus or equivalent standard with a space heating demand of less than 15KWh/m² /year. Whilst we are encouraged by the potential for inclusion of PV panels we note there is no definite commitment at this stage to comply with this requirement.

Design Issues

The Town Council’s view is that the proposed development (particularly regarding the detailed application) is unacceptable. We refer here to the observations of the Urban Design Officer regarding numerous aspects not least “street scenes”, the density of the proposals which are far too high for an “urban edge development” which has hitherto been Green Belt land. There is a great deal wrong with the proposals but to cite but one example, please consider the western edge of the proposed development. The existing dwellings (which are quite substantial properties that, thanks to the topography sit considerably lower than the ground level of the development site). They would not only be overlooked by the proposed housing but the proposed style of houses along this edge would be entirely out of keeping with the immediate locality. There appears to have been no consideration of how existing power cables will be accessed nor the effect on drainage. We have little doubt that if the application here was to build a single dwelling (let alone a dozen or so) backing on to the existing properties, considerable concerns would have been raised about “overlooking/loss of privacy” and “loss of amenity”. There should in our view be a clear “gap” and “green space” between the existing dwellings and any proposed new housing. Paragraph 139 of the NPPF states that “development that is not well designed should be refused”. The applicant has not submitted a Building for a Healthy Life assessment, as required by Policy R8 of the emerging Ringwood Neighbourhood Plan. The Town Council and members of the RNP team have undertaken a BfHL assessment (see attached, which forms part of the Town Council’s response), which indicates the development is not well designed. On that basis, the application should be refused.

“Open Spaces – ANRG etc.”

The Town Council welcomes the exclusion of the “Ten Acre Field” in the applicant’s strategy. However, the proposal to include land adjacent to Crow Lane as part of its proposal is simply wrong (please refer to the Council’s comments on planning application 23/10707) and for the purpose of this application should be ignored. The application is not compliant with policy and for this reason alone should be refused.

Landscaping

Policy R10 of the emerging Ringwood Neighborhood Plan states that “all proposals should protect and maintain trees and hedgerows; provide for the planting of new trees for flood management and carbon sequestration purposes; and include hedgerows and bulb and wildflower planting where it is compatible with the street scene.”

We note the intention is to maintain most of the hedgerows and to plant new trees, however we would ask for more details of bulb and wildflower planting in the area.

Drainage etc.

The applicant appears not to have considered properly how water currently drains from the site nor the effect of its proposals on adjoining properties. Much further investigation needs to be undertaken in this regard. Hampshire County Council, as the Lead Local Flood Authority, requested specific information in their original response dated 28/01/2022. They responded further on 20/06/2023 stating that information on infiltration testing and groundwater monitoring to support the drainage strategy had still not been provided. The most recent response dated 05/02/2024 states that this information remains outstanding. Given the increased level of flooding in the area, it is of great concern that the applicant has failed to provide the required information and to demonstrate an adequate drainage strategy for the site. There is an opportunity to bring back into use the currently redundant Moortown Lane Flood Relief Drain if this development proceeds. We would welcome a conversation with HCC as the Local Lead Flood Authority and the applicant as to how this might be achieved.

Archaeology

It would appear that the site has some archaeological significance but precisely what that might be has not been disclosed. The Town Council requests that there should be fuller disclosure regarding this aspect and appropriate conditions attached to any consent.

Conclusion

The Town Council recognises that, both nationally and locally, there is a housing shortage, particularly for younger people who find it difficult to the point of impossibility to step on to the “housing ladder”. However, there are yet again so many issues with the present application, both outline and detailed, that we urge that the application be refused and the applicant be in effect invited to go back to the drawing board.

April 2022

Summary

This is Ringwood Town Council’s response to planning application 21/11723, which was agreed by Full Council on 27th April 2022. The Council reserves the right to submit further comments after this date in respect of any further information received relating to the application. The Town Council recommends that the application is refused (R4). The application for outline planning consent concerns part only of Strategic Site 13 as identified in New Forest District Council’s Adopted Local Plan Part 1 and the detailed planning consent concerns part only of the site included within the area encompassed by the outline application. In this response, RTC address a number of matters of “detail” but that we have chosen to do so should not detract from its fundamental objection to the current proposals.

Introduction

During the process of adoption of the Local Plan Part 1, RTC made both written and oral representations to the Public Inquiry with regard to what was originally known as “Site P” but is now referred to as “Strategic Site 13”. In very brief summary, RTC was opposed to the removal of Site 13 from the Green Belt and concerned as to the extent of the proposed development and matters relating to infrastructure. Nevertheless, the site was included within the housing allocation on the basis it could provide at least 480 dwellings, employment land of about 2 hectares, the provision of land for a minimum of 15 full size allotment plots and (south of Moortown Lane in the Green Belt) the provision of natural recreational greenspace and public open space (including outdoor sports facilities) and 2 hectares of land to be reserved for a primary school. It should be noted that the current applicant neither owns nor has any control over parts of “Site 13” and this is highly relevant in that it means that the applicant is simply not in a position to deliver a number of strategic/policy objectives of the Local Plan insofar as it relates to this site. Further detail as to the relevant issues are dealt with below.

The mere fact that the land the subject of the applications is included as a strategic site within the adopted Local Plan does not mean that any planning consent should be automatically granted (even in outline) – the applicant needs to demonstrate that its proposals include appropriate infrastructure and in the view of RTC, the current application manifestly fails in that regard.

Further, the proposals either entirely or inadequately fail to address a series of other matters of concerns which are outlined below.

Caveats

At the time of preparing this response, formal responses from a number of consultees were awaited, including in particular from (but not limited) to the Highway and Education authorities. RTC must reserve its right to comment further in the light of further responses from other statutory consultees (see also further below).

Issues

In this section, RTC simply sets out the matters of concern – more detailed comments follow in the sections below and the appendices. Principle of Development Housing Mix and Type Design Considerations – Site layout Transport (including walking and cycling strategies) – please note that this issue is fundamental. Nature Conservation and Ecology Public Open Spaces Flooding, Drainage, Water Supply and Foul Water Residential Amenity Sustainability Gravel extraction.

Principle of Development

Whilst the Local Plan identified the land included within the application as appropriate for housing (and employment) development, this was on the basis that appropriate infrastructure be included in any proposal. The application fails to comply with this policy requirement on a number of matters: No community facility is proposed within the site and no proposal has been made regarding any “off-site” provision. RTC is not in a position to suggest any “off-site” provision and looks to the applicant to make appropriate proposals. The proposal does not include any provision for a primary school (see further below regarding transport in particular). RTC does not consider it appropriate that any land currently used for formal recreational activity should be re-designated as a school. If (and the Education Authority’s response is awaited) it is necessary or appropriate to designate land for

the construction of a Primary school, it is the view of RTC that this must be provided within the site in the applicant's ownership, excluding any land that is currently used as formal recreational space (i.e. the football pitches south of Moortown Lane). The application also fails to take into account that Ringwood currently does not meet national criteria regarding formal recreational space. The proposal as it stands would reduce the number of football pitches currently available and makes no provision for either replacing that same nor increasing the provision as would be required should this proposed development be approved. The proposal taken as a whole does not provide sufficient informal green space to meet policy requirements and its design (see further below) is also problematic.

Housing Mix and Types

It is noted that the outline scheme provides 50% affordable housing but the detailed planning application does not. This is not acceptable. Furthermore, the mix of housing and types proposed is contrary to NFDC policy; Housing Mix – Application Planning Statement section 6.75 correctly reproduces the NFDC Local Plan (2020) Policy HOU1 for the required mix of housing sizes, for each of the sectors “Affordable Housing to Rent”, “Affordable Housing to buy” and “Market Housing”. However, the presentation made does not achieve these proportions. Para 6.75 lists overall proportions but without reference to different housing sectors, and moreover, are listed as “indicative” - hardly a commitment!

Moreover, the open market housing mix only proposes 20% of 1-2 bedroom sizes, compared with Policy HOU1 which requires 30-40%. This failure to match the requirement would mean that, of the 168 dwellings proposed in phase 1, there would be a shortage of some 25 dwellings likely to be more affordable to people - particularly those with Ringwood connections - to start a home. There is very little in this application that benefits the well documented housing needs of our local community, and the diminution in this developers plans for fewer smaller, less expensive housing is unacceptable.

2. Housing Types. Although the proportion of subsidised Affordable Housing in the proposal of 47% is nearer the Policy requirement of 50%, the recently commissioned Ringwood Housing Needs Assessment (attached) suggests the split of types should be 50% Affordable to Rent/50% Affordable to Buy, rather than Policy guidance of 70%/30%. This Needs Assessment summarises the position as follows:-

“Accordingly, within the Affordable Housing that comes forward in future we have recommended a split of 50% routes to home ownership and 50% Affordable Housing for rent. Within the 50% affordable ownership, there could also be a split of 25% First Homes, 20% Shared Ownership and 5% Rent to Buy. Importantly, this split within the affordable home ownership is compliant within current government guidelines, such as First Homes and Rent to Buy. This recommendation should be interpreted flexibly as there is an argument for a higher weighting on affordable rented products due to uncertainty about future rates of turnover, the need to meet a share of the District's needs, and the fact that much affordable home ownership is only affordable to above average earners in Ringwood.” We recommend this proposed 50/50 mix of Affordable tenures as being more suitable for the subsidised housing sector on this SS13 site. Regard should also be had to the work undertaken by RTC's Neighbourhood Planning Teams regarding housing need in Ringwood (Appendix A).

In summary, the application is unacceptable because it does not:

Provide sufficient open market housing for one and two bedroom apartments and flats (Indeed, there appear to be no proposals for such housing within the detailed

application);

Provide for larger affordable housing such as 4 bedroom houses;

RTC would in any event ask for a s.106 Agreement to ensure that all manner of affordable housing is provided before open market housing is offered for sale/occupied.

Design Considerations

Site layout RTC have significant reservations about the design (particularly in relation to the detailed application). The detailed application seems to us to be very inward looking and quite inappropriate for a development on the fringes of the Town, bordering as it does to Green Belt land and in very close proximity to the National Park – there would be no (or very limited) views from within the development to the open areas. The density of proposed housing in the detailed application (40 per hectare) is significantly greater than what has been approved (and now built) at Beaumont Park (Linden Homes at 32-33) and the proposed development at the “Taylor Wimpey” site (also referred to as “Hightown”, “Nouale Lane” and strategic site 14) at 35 per hectare. Further, the detailed application provides little (if any) opportunity for soft landscaping and one is left with the impression that the “side streets” will probably be obstructed by parked cars (see also further below under “sustainability”).

There is at present a large tree and copse in the middle of the site which is a nesting site for a pair of breeding buzzards. It is understood that this tree would be felled which would be regrettable to say the least – we suggest that a TPO be made to prevent this. In the view of RTC, the proposals do not adequately provide for preservation of existing hedgerows nor the provision of additional tree and other planting. The “green spaces” are remote from the proposed housing and few if any are incorporated within the detailed application and there is what might be described as a “hard edge” around the housing site with no “soft transition” to the open areas. This is particularly the case along the western boundary – see further below regarding the water main and overhead electric power lines. Further, the proposals do not take into account the impact of the proposed development on the National Park, particularly but not limited to light pollution. Under the NPPF, a proposal that is not well designed should be refused consent. An appropriate tool should be used to assess how good the design is. In this context, RTC make reference to a “Building for a Healthy Life” (“BfHL”) assessment undertaken by one of the teams involved in drafting a Neighbourhood Plan for Ringwood which indicated the proposed development is not well designed. A copy of the assessment is at Appendix B. Noting that use of appropriate tools like BfHL is required by the NPPF [133], we would be interested to know which ones are being used by NFDC to assess Ringwood’s allocated sites.

Transport

The Local Plan (and earlier incarnations) envisaged a route from the A31 (west bound), through what is now the “Taylor Wimpey/Nouale Lane” site, then onto Crow Lane and then through this site to Christchurch Road, either via Moortown Lane or, more importantly through the Forest Park (or as we know it the “Wellworthy site”). The applicants are simply not in a position to deliver the policy objectives because no application has come forward from Hampshire County Council regarding the plot of land in the North West corner of site 13 and the access onto Crow Lane depends on the ownership of land that is also outside the applicant’s control (and would most probably require the demolition of one or more of the properties along Crow Lane itself). It follows that the applications must be considered on basis that the sole access into and from the site will be from Moortown Lane. This alone does not

achieve the policy objectives of the Local Plan. Whilst this response has been prepared without sight of a response from HCC Highways, RTC comment as follows:

The proposal does not meet the policy objective of a link from the A31 to Christchurch Road nor does it achieve a sustainable cycling and walking strategy.

The traffic assessment is based on surveys that are out of date, having been conducted either during lockdowns or at times when significant numbers were working from home.

The proposals for the junction between Moortown Lane and Christchurch Road and along the western end of Moortown Lane are unsatisfactory. There is simply not enough room to allow for a footpath and 2/3 lanes of traffic without encroaching onto privately owned land. Further, the houses on either side of Moortown Lane at this point (particularly that on the northern side) occupy elevated positions and it would be necessary to provide some form of retaining wall that would dominate the street scene in what is at present an entry point into the countryside. Such a construction would be incongruous and unsightly.

The applicant has acknowledged that the development will have consequential effects on the route into Ringwood Town centre and to the A31 and suggests that three of the four roundabouts could be improved to ease traffic flow and congestion. However, no details have been provided and the Town Council is aware that previous investigations by the Highway authority have demonstrated that there is no practical scope to improve the three roundabouts at the junction with Castleman Way, at the War Memorial and the main town roundabout junction with Southampton Road.

The applicants also propose a pedestrian crossing point at the Moortown junction, across Christchurch Road. It is ludicrous to think that pedestrians will cross the road at that point simply to avoid walking across the forecourt of the Texaco filling station; further, the footpaths along Christchurch Road are not continuous and the one footpath that passes opposite the brewery site is very narrow with no scope to be widened.

The transport assessment also assumes that the majority of school children living in the development would walk or cycle to school. Unless the applicants can deliver a walking/cycling route across Crow Arch Lane and into and across the Beaumont Park estate (Linden Homes) (over and onto land that is not within their ownership), the only access will be via Moortown Lane. Elsewhere, it is proposed that primary and junior school children would be educated at Poulner schools (notwithstanding that this site currently falls outside the catchment area!) – a distance of over 2 miles away, on the other side of the A31. It is frankly ludicrous to suggest that parents will do anything other than drive their children to school (there are no buses). Not only will that significantly increase traffic movements at dropping off and picking up times but it will also exacerbate an already serious issue of parking around the Poulner Schools.

Nature Conservation and Ecology

The proposed ANRG does not meet minimum policy requirements and does not accord with the relevant SPD in terms of functionality as there is a road crossing through the middle of it.

Whilst it is conceded that the scheme proposes a net gain in bio diversity (largely because the land is currently high quality arable land), it is of concern that the

mature trees in the middle of the site is to be felled and that elements of hedgerow will be lost. Further, deer are regularly seen to be grazing on the land and will be displaced.

The site is just over 100m from the Avon Valley SSSI and there is extensive evidence that the gardens of the houses in-between are permeable to wildlife. The site layout would close this corridor and be against consultee advice from Wessex Water (due to water pipes) and the presence of overhead electricity cables, both of which require access for maintenance. More information on this and concerns about the BNG and phosphate calculations used by the applicant is contained in Appendix C.

The site layout with its streets effectively lined with housing provides little or no opportunity for landscaping and planting within the built area. If each property has a soak-away in its rear garden as proposed, this too would limit the opportunities that future residents might have for tree planting on their properties.

There is also serious concern regarding a lack of any detailed phosphate mitigation – NFDC does not have its own scheme and the applicants have provided no detail of what mitigation they might be able to achieve (nor where).

Public Open Spaces

RTC questions whether the scheme provides sufficient informal space but is also extremely concerned that the scheme relies on utilisation of existing formal recreational space. By national standards, Ringwood is already deficient in terms of formal recreational space and that will remain the case even after the proposed redevelopment of the Football club. Far from providing additional formal space, the scheme envisages the loss of two existing playing pitches. It is submitted that the applicant should provide both additional formal and informal recreation space within the land it owns/controls north of Moortown Lane and does not rely on any of the land to the south of the lane.

Flooding, Drainage, Water Supply and Foul Water

The scheme is deficient in that it suggests that each property should have its own soak away in rear gardens – this would severely limit the opportunity to plant trees in rear gardens. No swells or SUDS are proposed and surface water from the roads is to be held in crates. This proposal is a lost opportunity to increase bio-diversity by the creation of ponds or small lakes. The applicant also appears to be unaware that existing field drains flow through the listed building known as Moortown House – the existing flow has historically caused flooding in the formal garden of that property and surface water from roads finding its way into that drain for example is likely to be contaminated with oil, diesel and petrol. Local residents have also raised concerns about water pressure in the existing mains serving other properties in the locality. No information has been provided regarding the provision of water supplies to the proposed development nor has any account apparently been taken of the effect that may have on existing properties, including those within Beaumont Park and along Crow Lane in particular. No detail has been provided as to how the foul sewers from the site would connect to the existing foul sewer in Christchurch Road and RTC question whether that sewer has the capacity to cope with the additional demand this development would cause. RTC also understands that the sewerage treatment plant in Hampshire Hatches is already at capacity (such that from time to time, untreated waste is discharged into the river Avon) and questions whether it is physically possible to increase capacity. Another matter of concern is that some years ago, a flood relief drain was constructed in an attempt to alleviate the flooding that regularly occurs along Crow Lane. Whilst this drain has not yet been

commissioned (recent investigations have been undertaken with a view to bringing it into operation), RTC question how it might be impacted by the proposed development.

Residential Amenity

RTC's principal concern here is the impact on existing residents along the western boundary of the site. Many of those properties lie significantly below the ground level of the site and as the proposal stands, would be substantially overlooked by new houses. The scheme envisages that the rear gardens of properties along the western boundaries would abut onto the existing boundaries of the existing properties. However, it is understood that there is a water main running along the western boundary along with electricity cables, vehicular access to which would be required at all times. Further, it is understood that the water utility company would require a "corridor" that is at least 10 metres wide along the route of the water main – the scheme does not provide for these requirements. It is also noted that there appears to be no assessment of odour or noise. The detailed layout also leads RTC to suppose that there will be substantial on-street (or worse, on pavement) parking once the houses are occupied.

It is acknowledged that it is a matter for the applicant to determine when to bring forward application but RTC is surprised that the current proposal is to develop that part of the site closest to Moortown Lane first. If that were to happen, it would mean that new residents on the estate would find that construction traffic for the remaining part would have no option but to go through the middle of the new housing with all the noise and associated nuisance that would bring.

Sustainability

It is noted that the proposal is simply to construct properties to existing Building Regulation standard, even though Crest Nicholson confirmed to RTC that they intended to build to a higher standard and indeed, have done so elsewhere. This scheme can hardly be described as innovative in that (for example) it does not provide for solar panels (and the orientation of many of the proposed houses would be sub-optimal in that regard); heating will be gas powered with no provision for heat pumps; no attempt is made to provide for grey water recycling and the build methods are traditional and carbon intensive. More information on this is provided in Appendix D. The lack of SUDS is also regrettable in terms of sustainability.

Gravel extraction

At the Public Inquiry into the Local Plan, it was asserted by those seeking to bring forward this site that gravel/mineral extraction would need to take place before the site was developed. Whilst RTC would not encourage such extraction on this site, not least because of the disruptive effect on local residents (noise and dust etc) it would be appreciated if further information could be provided.

Conclusion

The Town Council recognises that both nationally and locally, there is a housing shortage, particularly for younger people who find it difficult to the point of impossibility to step on to the "housing ladder". However, there are so many issues with the present applications, both outline and detailed that we urge that the application be refused and the applicant be in effect invited to go back to the drawing board.

7 COUNCILLOR COMMENTS

No comments received

8 CONSULTEE COMMENTS

The following comments in summary have been received. Comments listed below have been reviewed and updated following the most recent amended plans submitted in 2024. All comments are available to view on the NFDC website.

HCC Highways – no objection subject to obligations and conditions

Revised development and on-site highway matters

A Stage 1 Road Safety Audit (RSA1) has been provided for the internal layout. Within the RSA1, three problems were raised. Subsequent design amendments have been carried out and the Safety Auditor has confirmed these amendments satisfactorily address the problems raised. The Highway Authority (HA) accept the proposed internal layout, subject to the following comments being addressed at the S38 detailed design stage where roads are being offered for adoption. Vehicle tracking will finalised during the adoption process.

For roads to be offered for adoption, the proposed surface material and construction build-ups need to be in accordance with HCC highway adoptable standards and standard construction details. Adequate road markings and signage should be provided for review at the detailed design stage. The proposed internal spine roads will be provided to the boundary of the site to facilitate future connection to the two parcels which complete the SS13 NFDC Local Plan allocation. These roads should be designed and constructed to adoptable standards and offered for adoption.

Moortown Lane/ Christchurch Road Improvement

The HA previously requested additional information be provided to provide the HA with certainty that the works can be delivered within the highway boundary or land within the control of the applicant. The applicant has provided additional information which provides sufficient reassurances to the HA that the proposed scheme is deliverable. The HA therefore confirm that design of the improvement works at the Moortown Lane/ Christchurch Road priority junction is considered satisfactory.

Pedestrian/ cycle routes through the site

The applicant's transport consultant has confirmed as part of earlier responses that the primary and secondary footpaths to the east of the site will be available for use by cyclists, this should be secured through a suitably worded condition to be dealt with at the reserved matters stage.

The HA previously requested a pedestrian and cycle link be provided as part of the phase 1 works between the Moortown Lane emergency access and the primary street access to Moortown Lane. The applicant advised that due to the phase 1 layout and drainage proposals a dedicated link could not be provided in this location. An alternative pedestrian and cycle route on land south of Moortown Lane was proposed providing a link between the site access and Long Lane (drawing ITB12364-GA-077). Although this alternative link was not included as part of the RSA for the site, the designer has since confirmed that a suitable footway and cycleway link, deliverable to HCC standards, can be provided at this location. The HA note that this provision, as well as providing suitable access for future residents

to the football club and Long Lane, also provides a connection from the site to likely future Local Walking and Cycling Improvement Plan route via Long Lane.

The HA understand that the phase 1 drawing for the internal pedestrian and cycle links has been updated to ensure that the pedestrian and cycle links to the agreed allotment access (drawing ITB12364-GA-008H, see comments below) are provided prior to first occupation. This should be secured through planning condition to ensure these links are available for use in perpetuity.

Moortown Lane Site Access and PROW access

A plan (ITB12364-070A) has been provided which shows the widening of Moortown Lane between the junction with Christchurch Road and the proposed site access, which is acceptable to the HA. The HA acknowledge that the requirement for a bus to pass along Moortown Lane is no longer part of the public transport strategy for the site; however, the HA consider with the information available that the widening should still be implemented. Overrunning of the existing verge is visible and the additional development traffic would exacerbate this. Furthermore, the tracking provided is tight. Given the level of development proposed, vehicles will need to pass often, including regular instances of two delivery vans (or other large vehicles) passing and the HA feel this should be comfortably accommodated without damage to the verge or carriageway edge. The applicant has agreed to implement these improvements to Moortown Lane, which should be secured through S106 Agreement obligation. However, the HA may be willing to explore monitoring of this section of Moortown Lane through the first phase of the development to confirm the requirement for widening; this can be discussed as part of S106 negotiations should the site come forward.

Christchurch Road/ Moortown Lane pedestrian and cycle scheme

Costs for the indicative walking and cycling scheme (ITB12364-GA-060) along Moortown Lane and Christchurch Road are now accepted by the HA. A proportionate contribution for the applicant to provide towards the scheme has been agreed.

Crow Arch Lane pedestrian and cycle access

A revised drawing of the pedestrian and cycle access alongside the allotments and linking to Yarrow Lane (Drawing ITB12364-GA-008H) was provided to the HA for review. Due to design changes resulting from the Road Safety Audit the visibility splays for pedestrians were shown to be below Technical Guidance Note 3 (TG3) requirements, therefore requiring a Departure from Standard (DfS). The DfS was considered by HCC departure board and approval in principle of the DfS been issued. This approval notes some minor amendments that may need to be addressed by the applicant at the S278 detailed design stage.

The design review of Drawing ITB12364-GA-008H also highlighted the following comments which will need to be addressed at the S278 detailed design stage. The Designer's response regarding the width of pedestrian crossing on Yarrow Road has been accepted by the Safety Auditor. However, this has not been fully addressed and may need further consideration at the S278 detailed design stage. An appropriate dropped kerb access and warning tactile paving is required where the cycleway from the Castleman Trail joins Yarrow Lane. Details of the suitability of the proposed works for allotment access and tie into Crow Arch Lane have not been included in the RSA review. This should be considered as part of the future S278 works on Crow Arch Lane should the development come forward.

Traffic Impact

The traffic impact has previously been agreed at all appropriate locations with the exception of the B3347/ The Furlong roundabout junction. The HA can confirm that this junction modelling is now considered acceptable. A mitigation scheme has been proposed, shown on plan ITB12364-GA-043B, widening the Southampton Road arm of the junction to allow a longer length of two-lane approach. The proposals have been costed and this cost agreed with the HA. A contribution of this value is considered adequate mitigation.

Routes to Schools

The improvements on the routes to Ringwood Schools (ITB12364-GA-049) and the McColls/ Morrisons Daily store are acceptable to the HA. Due to the catchment school potentially changing in future, the HA have agreed to take a contribution towards walking and cycling improvements on the routes between the site and catchment schools and school travel planning measures. This is considered adequate mitigation.

Crow Lane Crossing (Castleman Trail)

The HA accept the proposed crossing improvements on Crow Lane detailed on drawing ITB12364-GA-080B to access the proposed public open space detailed in planning application reference 23/10707. The HA require the visibility splays should be based on record speeds and would expect to see 54m both ways with a minimum offset of 300mm in accordance with TG3. These works should be secured through an appropriate S106 planning obligation.

Bus Service

The applicants Technical Note details that the previously proposed bus strategy was no longer supported by the bus operator. As an alternative the applicant has agreed to provide a contribution to fund the running of a taxi share to serve the site. In order to instil sustainable travel patterns, the HA would want to operate this service from early in the build out of the development until post final occupation and is satisfied the contribution will facilitate this.

Schedule of S278 highway works

A technical note detailing the Schedule of S278 Highway Works dated 12th March 2024 has been submitted. The document appears to be in accordance with previous discussions between the HA and applicant but will be discussed and formally agreed as part of the S106 negotiations.

Schedule of S106 highway contributions

The HA and applicant have agreed an acceptable contribution of £1,040,588 to be secured by S106 Agreement towards walking and cycling improvements on Christchurch Road, multi-modal transport improvements to reduce vehicular traffic using the B3347/ The Furlong junction, walking and cycling improvements on the routes between the site and catchment schools, school travel planning measures and passenger transport services benefiting the site. In addition, the Travel Plan has been agreed and will need to be secured via S106 Agreement along, including the £1,500 approval fee, £15,000 monitoring fee and £75,550 bond/ surety.

Recommendation

Hampshire County Council as Local Highway Authority raises no objection to the planning application submit subject to the following S106 obligations and inclusion of the below conditions.

S106 Obligations

- A contribution of £1,040,588 to be secured by S106 Agreement towards walking and cycling improvements on Christchurch Road, multi-modal transport improvements to reduce vehicular traffic using the B3347/ The Furlong junction, walking and cycling improvements on the routes between the site and catchment schools, school travel planning measures and passenger transport services benefiting the site.
- Submit and implement a Full Travel Plan, payment of the Travel Plan approval (£1,500) and monitoring fees (£15,000) and provision of a £75,550 bond/ surety to ensure implementation of the Full Travel Plan.

Monitoring of Moortown Lane through the first phase of development to determine whether widening is necessary. Implementation of the site access works, off site pedestrian and cycle improvements on:

- Moortown Lane Site Access (ITB12364-GA-032D)
- Moortown Lane emergency, pedestrian and cycle access (ITB12364- GA-025E)
- Moortown Lane proposed eastern pedestrian access (ITB12364-GA031E)
- Widening of Moortown Lane (subject to monitoring through Phase 1 of the development) (ITB12364-070A)
- Allotment Access/ Crow Arch Lane/ Yarrow Way (ITB12364-GA-008H)
- Moortown Lane/ Christchurch Road junction works (ITB12364-GA023E)
- Crow Arch Lane pedestrian improvements (ITB12364-GA-038E)
- Crow Lane Crossing (ITB12364-GA-080B)
- Pedestrian/ cycle route Between Moortown Lane and Long Lane (ITB12364-GA-077)

Conditions

Primary and secondary footpaths to the east of the site will be available for use by cyclists. The internal pedestrian and cycle links between Phase 1 development and the allotment access (drawing ITB12364-GA-008) should be provided prior to first occupation and available for use in perpetuity.

The proposed internal spine roads will be provided to the boundary of the site to facilitate future connection to the two parcels which complete the SS13 NFDC Local Plan allocation.

A Construction Traffic Management Plan shall be submitted to and approved by the Planning Authority in writing before development commences. This should include

construction traffic routes, parking and turning provision to be made on site, measures to prevent mud from being deposited on the highway and a programme for construction. The agreed details shall be fully implemented before the development is commenced.

Lead Local Flood Authority (LLFA) – no objection subject to conditions

Further information has been provided on infiltration rates, along with additional explanation on groundwater and exceedance flow routes. The drainage layout and calculations have been updated to suit. The details are acceptable to the LLFA, and conditions are required due to the hybrid nature of the application.

Countryside Services (Public Right of Way) - no objection, subject to obligations and conditions

Detailed comments on Ringwood Footpath 45 and Ringwood Bridleway 509/Castleman Trail and Ringwood Footpath 41a footbridge.

Local Education Authority - no objection subject to obligation

Based on the need for a 1fe expansion only (pro rata, per pupil generated by the development) Full application: 138 eligible dwellings x 0.3 = 41.4 primary age children 41.4 x £20,804 = £861,286 Outline application: 257 eligible dwellings x 0.3 = 77.1 primary age children 77.1 x £20,804 = £1,603,988 Total contribution required: £2,465,274.

HCC Public Health - comments

Detailed comments on healthy homes, sustainable transport and active travel, green and open space, and healthy neighbourhoods.

HCC Minerals and Waste – no objection subject to condition

Detailed comments received in May 2022 and November 2023 from the HCC Minerals and Waste team. Suggested condition set out.

Natural England – comments

European designated sites - Habitats Regulations Assessment

Natural England notes that the Habitats Regulations Assessment (HRA) has not been produced by your authority, but by the applicant. As competent authority, it is your responsibility to produce the HRA and be accountable for its conclusions. We provide the advice enclosed on the assumption that your authority intends to adopt this HRA to fulfil your duty as competent authority.

Deterioration of the water environment River Avon Catchment - Phosphate Budget

Natural England acknowledges that a nutrient budget assessment has been carried by Tetra Tech (May 2024). The proposals result in an increase in 28.05 kg TP/yr with options land 27.88 kg TP/yr. The nutrient budget states to offset the increase in phosphate as the result of the development, credits will be purchased from Bicton Fish Farm. Providing this is secured by an appropriately worded condition, Natural England welcomes this.

New Forest Recreational Impacts

Recent analysis shows that new residential development within a 13.8 km buffer zone of the New Forest designated sites is likely to have a significant effect on the sites via recreational impacts (including disturbance, trampling, eutrophication amongst others), alone and/or in combination with other plans or projects. Larger developments (e.g. EIA development) beyond this zone but within 15 km may also contribute to recreational impacts on the designated sites. This application is situated within 13.8 km zone and will result in an increase in residential accommodation. Natural England is aware that your authority has an adopted a strategy to mitigate against adverse effects from recreational disturbance on European sites. Providing that the applicant complies with your adopted strategy, Natural England is satisfied that the applicant has mitigated against the potential adverse effects of the development on the integrity of the European sites and has no objection to this aspect of the application.

Alternative Natural Recreational Greenspace

We note that there is a provision of Alternative Natural Recreational Greenspace (ANRG) incorporated into the site proposals. The area of ANRG, is required to be created within the site in accordance with the New Forest District Council's Recreation Mitigation Strategy (2021). In order to deliver ANRG provision of 8 ha per 1000 of additional population at the proposed residential development. The required area of ANRG to support the development is 9.54 ha, the proposed development is aiming to deliver 12 ha of ANRG, which Natural England welcome. We understand a financial contribution will be made towards Access and Visitor Management and Monitoring to monitor the designated sites and recommend and potential alterations in management if required.

Phasing of ANRG

Phasing the areas of ANRG in line with the phasing the of the development is recommended, to support and provide recreation mitigation from the beginning. A phasing plan is recommended to be created and signed off by the New Forest District Council. The phasing plan should set out areas of development and mitigation being brought forward at different times in line with the development.

Future Management of ANRG

The designated ARNG on site which has been provided for mitigation purposes, must be secured for its intended purpose in perpetuity which is 90 years. A management and monitoring plan is required to ensure that the ANRG is functional for the entire 90 years. The monitoring management plan, should include details such as maintenance of pathways, replacement of dog bins, furniture, management of recreational spaces etc. This is recommended to be submit to the LPA and secured by a suitable worded condition. Ideally the land designated for ANRG will be transferred to public ownership/control. It is for you as competent authority to be satisfied the mitigation land will be appropriately secured, monitored and is enforceable. Funding and responsibilities should be outlined. A suitable long term management and monitoring plan should be agreed that ensures it will remain effective over the lifetime of the development it serves.

Nationally Designated Sites - Sites of Special Scientific Interest (SSSI)

Some of the above impacts may also affect the New Forest SSSIs. Please note that if your authority is minded to grant planning permission contrary to the advice in this letter, you are required under Section 28I (6) of the Wildlife and Countryside Act

1981 (as amended) to notify Natural England of the permission, the terms on which it is proposed to grant it and how, if at all, your authority has taken account of Natural England's advice.

ANRG and Biodiversity Net Gain Guidance

ANRG can be included in developers' BNG calculations up to a maximum value of no net loss, as calculated by the biodiversity metric. This means that 10% of a developer's BNG units must come from other, additional activities. Additional habitat creations or enhancements within a ANRG, which go over and above the site's existing requirements to function as a ANRG in perpetuity, could contribute to a developer's BNG beyond no net loss. Any proposed habitat enhancements or creations within a ANRG must not undermine the ANRG original design principles and purpose, such as deflecting people and pets from visiting a the New Forests designates sites. Consideration should also be given to other ecosystems services provided by the ANRG. Careful design and an appropriate management plan will make sure BNG does not compete with these.

The area of ANRG is required to be secured for 90 years in perpetuity, whereas BNG is required to be secured for 30 years. It is recommended that management plans are careful set out according to the time scales and requirements. Biodiversity net gain assessments should be accompanied by a management and monitoring plan outlining management requirements for 30 years.

Ideally developers and LPAs, Habitat sites strategic solutions should work alongside strategic licensing and BNG in a combined approach to deliver for the natural environment in a place. Where applicable, enhancements or additional features delivered for BNG, should be informed by local nature or wildlife strategies and priorities, such as LNRS.

Sustainable Drainage System (SuDs)

The detailed design of a Sustainable Drainage System (SuDS) should be submitted and agreed with New Forest District Council. This should include evidence to show that the proposed SuDS scheme will ensure there will be no deterioration in water quality [or changes in water quantity] in discharges from the site. Information on the long-term management and maintenance (including funding) of the SuDS for the lifetime of the development should also be secured prior to the commencement of any works.

Biodiversity Enhancements

The New Forest District Council Policy ENV1 : Mitigating the impacts of development on International Nature Conservation sites, outlines that all applicants will be required to demonstrate the impacts of their proposal on biodiversity, and for certain types of development by submission of an Ecological Appraisal, which should outline the mitigation and enhancement measures needed to achieve a net gain in biodiversity. It recommended that the local plan authority secures this.

Development should provide net gains for biodiversity in line with the NPPF paragraphs 174(d), 179 and 180. Development also provides opportunities to secure wider environmental gains, as outlined in the NPPF (paragraphs 8, 73, 104, 120,174, 175 and 180). We advise you to follow the mitigation hierarchy as set out in paragraph 180 of the NPPF and firstly consider what existing environmental features on and around the site can be retained or enhanced or what new features could be incorporated into the development proposal.

Opportunities for enhancement might include:

- Incorporating bat, bee or bird boxes into 50% of new dwellings, locations decided by the LPA / ecologist.
- Enhancing hedgerow with native species planting.
- Planting trees characteristic to the local area to make a positive contribution to the local landscape.
- Using native plants in landscaping schemes for better nectar and seed sources for bees and birds.
- Incorporating swift boxes or bat boxes into the design of new buildings;
- Designing lighting to encourage wildlife;
- Planting night blooming plants to attract bats and insects;
- Aquatic planting within the SuDS to enhance the waterbodies for amphibians

Protected Species

Natural England has produced standing advice¹ to help planning authorities understand the impact of particular developments on protected species. We advise you to refer to this advice. Natural England will only provide bespoke advice on protected species where they form part of a Site of Special Scientific Interest or in exceptional circumstances. Natural England's Environmental Benefits from Nature tool may be used to identify opportunities to enhance wider benefits from nature and to avoid and minimise any negative impacts. It is designed to work alongside Biodiversity Metric 4.0 and is available as a beta test version.

Sensitive Lighting Strategy

A sensitive lighting scheme should be designed and implemented to maintain and retain dark corridors used as an important commuting corridor for bats as well as other protected and notable species. The Bat and Conservation Trust have produced a guidance document *Bats and Artificial Lighting in the UK*. Outlining building regulations for domestic buildings specify that 150 watts is the maximum for exterior lighting of buildings but this does not apply to private individuals who install their own lighting. The building regulations for domestic buildings specify that 150 watts is the maximum for exterior lighting of buildings but this does not apply to private individuals who install their own lighting. There are a number of British Standards that relate to various components of lighting (set out). Further general advice on consideration of protected species and other natural environment issues has been provided.

Environment Agency – no objection subject to conditions

The proposed development will only meet the National Planning Policy Framework's requirements in relation to flood risk if the following planning conditions (finished floor levels; no operational development within Flood Zones 2 and 3) are included.

Historic England – no objection

Sport England – no objection

Sport England notes that the proposed development will omit the existing playing field/pitches in the south of the site and there is no plan to redesignate and landscape any of the playing pitches as alternative natural greenspace or include a MUGA. Sport England welcomes the retention of the existing playing pitches and on that basis we are happy to withdraw our objection to the application.

Active Travel England – comments

Active Travel England Standing Advice Note: Active travel and sustainable development provided.

NFDC Ecologist – no objection subject to condition

Lifespan of Ecological Reports

The ecological survey information has been gathered between 2019 and 2021 with an update walkover survey being undertaken in October 2023. The data is on the cusp of acceptability. However, NFDC Ecology are broadly happy that the ecological baseline is adequately captured to make an informed planning decision with respect to ecology and do not feel undertaking additional surveys at this stage would be proportionate given the amount of work done to date. The proposed development is phased. The ECIA states that “All necessary surveys are considered to be sufficiently up-to-date at the time of submission to determine the application. However, where relevant and depending on development timescales and phasing, certain detailed species surveys may require updating prior to commencement of the relevant phase of development.” Given the time elapsed since the surveys were undertaken, NFDC Ecology would suggest that proportionate update/verification surveys would likely be required to inform future phases of development as suggested in the ECIA. Suggested condition set out.

Phosphates

It is now proposed to purchase the necessary phosphate credits from Bicton. This is acceptable. NFDC Ecology previously very much shared the views and concerns of Natural England on the reliance on water saving devices (Cenergists HL2024) and the use of a lower bespoke water use value in the calculation. Whilst NFDC Ecology support incorporation of water saving measures, for the purposes of HRA NFDC Ecology would not be comfortable with this due to the inherent uncertainty and lack of information provided. As such, NFDC Ecology is pleased to see that the phosphate calculations and sHRA have been updated to use the 120l per person per day (from 103 previously). This addresses previous NFDC Ecology concerns on this point.

Habitats

Habitats Biodiversity Net Gain (BNG) assessment. NFDC Ecology are happy with the approach to the BNG assessment and note that additionality has been transparently addressed which is welcomed. The assessment demonstrates that the proposed development would result in a policy compliant net gain of biodiversity of > 10% for area based habitat and linear units. Given this is a hybrid application, should permission be granted, it would be necessary to re-run the metrics at the respective reserved matters stages to ensure that the gains predicted at outline stage remain deliverable. This requirement should be secured. The BNG assessment states that full details of the management of the habitats within the Site will be provided within a Landscape and Ecology Management Plan (LEMP) secured by suitably worded planning condition. A LEMP covering Phase 1 has been submitted. The LEMP and the need for subsequent revisions required for further RMA should be secured. This will be critical to the successful delivery and long-term (covering a minimum 30 years) provision of BNG. It will be necessary to secure the long-term management and monitoring of BNG through any planning permission. NFDC Ecology suggest this is achieved through use of a s106 agreement.

The LEMP includes in Table 7.1 a summary of monitoring actions. This includes reporting the results of monitoring surveys with a monitoring report being submitted to the council annually (This meets our minimum monitoring reports at years 2, 5, 10, 20 and 30 for BNG purposes). The BNG monitoring report should be produced by a suitably qualified and experienced ecologist and shall include the following for the target habitats:

- Credentials of the ecologist undertaking the monitoring;
- Assessment of habitats against the objectives and target condition defined in the management plan / assessment;
- Habitat type, extent and condition;
- Any presence recorded of target species;
- Date stamped photos accompanied by detailed site notes on extent of growth and condition using indicators in the management plan with any other notes of interest;
- If the target species /habitat is not present, provide detailed site notes on factors that are / could hinder growth or establishment;
- Detailed specific recommendations (where appropriate) on management actions to promote growth / establishment of target species / habitats including timescales for undertaking actions and marked site plans to show the actions;
- Photographs from the fixed monitoring points detailed in the management plan using high quality images.

Protected Species

Chapter 8 of the Environmental Statement states that protection of species during construction will be delivered through the provisions of the ECMS. The ECMS will be informed, where necessary according to the time that has elapsed and protected species interests, by update surveys. This and the measures set out in relation to birds, bats, badger, hedgehog are agreed. A number of ecological enhancements are proposed including bat boxes, bird boxes, hibernacula, invertebrate hotels, hedgehog highways etc. Suggested condition set out.

The reptile mitigation strategy submitted provides more detail and I am largely in agreement with the approach. Section 2.33 to 2.35 provides additional response to comments raised by Naturespace and the age of the survey data / likelihood of GCN being impacted by proposals. NFDC Ecology are content with the rationale presented i.e. that even if present an offence is highly unlikely in the work area and that favourable conservation status Of GCN is unlikely to be affected.

Birds

NFDC Ecology previously commented that the number of bird nesting enhancements and associated details were insufficient. The ES chapter has not been updated, however, the EDP LEMP now states the following: "With reference to New Forest District Council's NFDC'S expectations and within the Environmental Statement which requires one bird box per dwelling, a total of 150 swift boxes (finish to match that of the building if integrated) will be installed. Boxes will be mounted following manufacturer's specifications, out of direct sunlight on aspects of the building that provide some cover from surrounding vegetation to offer shelter to birds but with a clear flight line to/from the entrance (uncluttered). Boxes should be positioned between 2m and 5m from the ground to deter predators" This is welcomed and addresses previous NFDC Ecology concerns for the first phase. This would be expected for subsequent phases also. The schedule of enhancement measures should be completed prior to commencement.

Bats

The Ecology ES Chapter 8 correctly identifies the requirement for a sensitive lighting strategy given the confirmed presence of light sensitive bat species on site. Suggested conditions set out.

NFDC Ecology previously commented that the number of bat roosting enhancements and associated details were insufficient. The ES chapter has not been updated, however, the EDP LEMP now states the following: “With reference to NFDCs expectations and within the Environmental Statement which requires one bat box per dwelling, a total of 150 integrated bat boxes will be installed within the new buildings. Boxes will be mounted following manufacturer’s specifications, ideally orientated to face south with a clear flight line to/from the entrance (uncluttered). Boxes should be positioned between 3m and 5m from the ground to deter predators”. This is welcomed and addresses previous NFDC Ecology concerns for the first phase. This would be expected for subsequent phases also. The schedule of enhancement measures should be completed prior to commencement.

Badgers

A main (S1) and an outlier (S4) Badger sett were recorded as present on-site. These setts are located in areas of ANRG and can currently be maintained. However, a pre-construction badger survey is required to establish the current status of badgers on-site at the time of construction and inform mitigation necessary at that time. Suggested condition set out.

It is noted that in Section 3.20 of the LEMP that it states “No badger setts were recorded within the Site itself”. I am assuming this means within Phase 1, the setts are however right on the boundary of Phase 1 and should be taken account of accordingly.

NFDC Housing Initiatives Manager – comments

It is noted that due to issues of viability, the site will deliver 30% of the units as affordable housing. The affordable housing will be delivered in line with the tenure split set out in planning policy, with 35% Affordable Rent, 35% Social Rent and 30% Shared Ownership, which is welcomed. We would expect to see the proportion of each tenure reflected in phase 1 and 2 of the site. The proposal to deliver 75 units of affordable housing within the 1st phase of the scheme, with a size and tenure split as indicated is acceptable. The delivery of the remaining 58 affordable dwellings in phase 2 is accepted.

NFDC Trees - No objections on tree grounds subject to conditions

NFDC Play Officer - comments

The revised plans (April 2024) are warmly welcomed. It is positive that the Developer has taken on board many of our comments and suggestions. CS7 requires 1048m² for Phase 1, and the Developer has proposed a delivery of 2860m² (NEAP of 1338 m² with 208m² basketball court, LEAP of 1095m² with 154 and 65 in the wildlife area). This over/advanced provisioning looking towards Phase 2 is very much welcomed. While appreciating Phase 2 is not yet designed, the Developer should take into account their future housing and layout to ensure that the whole development is CS7 compliant.

NFDC Landscape – comments

Latest detailed comments received on 9 May 2024. There has been progress since the previous submission and much of the submission suggests a commitment to delivering a good landscape structure outside of the developed part of the site. There remain a number of minor issues including some information lacking, preventing unequivocal support in terms of landscape. Mostly such elements can be considered through planning conditions if the Council was to grant this application.

In terms of landscape impact and design, the issues of over-riding concern however are shared urban and landscape design concerns and relate to the design of streets and spaces within the developed area itself. In particular, the plans as submitted are not in accordance with para 136 of NPPF which states that planning decisions should ensure that new streets are tree-lined. It is not considered that there is currently sufficient information to recommend this application for approval.

Officers have set out how the proposed ANRG provision would be acceptable. The intentions for the design of overall greenspace provision, however, leave some concerns that could have been alleviated through a landscape framework drawing, upon which more detailed information could have been supplied through reserved matters (for the outline areas) and conditions (for the detailed area). There is clearly an intention to create interesting and exciting places through the designs but there are too many concerns to approve the drawings at this stage. We describe our various concerns, together with some suggestions for these. Revisions are needed or information could possibly be detailed by condition.

NFDC Environmental Design - objection

Detailed objection on design grounds. Contrary to Local Plan Policies ENV3 and STR1 (ii). Detailed objection comments on Alternative Natural Recreational Greenspace and Green Infrastructure, connections, building densities, scale, street design, boundary treatments, storage, tree planting, character areas, architecture, layout, sustainable drainage and residential amenity.

The application design throws up some functional issues within its layout, does not take proper cognisance of locally distinctive character or try to offer a strong enough sense of character in itself and that whilst the main green infrastructure offer can be really attractive; within the development envelope itself, there are many examples of buildings, streets and spaces that will not be attractive. There are several elements of the site-specific policy where this design falls short but by failing these three aspects of good design (functional, appropriate and attractive) the application fails policy ENV3.

Overall, though, the design includes the opportunity for well laid out green space and good green infrastructure. This does require some further work which can be the subject of conditions but in essence, is broadly welcomed. In terms of the developed areas:

- There is a simple clarity to the street alignments with sweet curves which are refreshingly uncontrived, setting a basic concept that could have driven a real strength in the 'sense of place' here.
- The same clarity of design underlies the primary footpath network and the form of public space.
- Placemaking areas as depicted on the masterplan are too weak.

- Streets are harsh, car dominated and despite some recent amendments which improve the scheme, often still contain hard standing in overly large expanses. There is not enough opportunity for personalisation, greenery and tree planting offered on many of the streets and there are functional issues of people needing to manoeuvre, which are likely to lead to considerable on-street parking, resulting in pressure to obscure pavements or remove what little front gardens may be proposed.
- Garden groups are often too confined to allow taller shrub and/or tree cover to either create a foil between backs or punctuate the skylines to reduce the impact of layering – the impression of more and more built forms seen behind, between and over with no respite.
- Neither densities nor building heights for the parameter plans are justified through the DAS and are demonstrably inappropriate in places within the phase 1 masterplan.
- The density plan does not make clear what is meant by the three categories, whereas the illustrative material and phase 1 masterplan show a persistent failure to provide appropriate intensity of development patterns.
- The western edge is not sufficiently sympathetic to existing residential patterns.

The development area does not take the opportunities for creating beautiful streets and places and does not consider the site's context or local character thoroughly enough to provide a development that sits well in its host environment or one that provides an attractive extension to this part of Ringwood. This is not insurmountable and whilst it appears to be the product of over intensification and overuse of standard suburban house types, this is actually more a result of the failure to follow existing guidance in the form of the Council's SPD on Housing Design Density and Character or Ringwood Local Distinctiveness and also the failure to innovate and create a special place through appropriately ambitious design aspirations, good architecture and good street design.

Alternative Natural Recreational Greenspace (ANRG) and Green Infrastructure

This is largely well provided for – please refer to the landscape focussed comments provided.

Connections

To ensure that the green spaces and amenity are properly linked, it will be important to secure well-designed crossing points for roads within the site as well as for Moortown Lane at both the location proposed and one further east where the PROW crosses from the ANRG space southwards. There is also a very important pedestrian link, connecting this site's ANRG with that of the incomplete Ring3 development north of Crow Arch Lane. Currently this is curtailed by a poorly located play area on that site. Please ensure that mechanisms are put in place to rearrange space to enable this link to connect into the GI of that site, once that land is made available to the council.

Density

The proposal seeks to deliver 443 of the expected minimum 480 houses. However, with the remainder of the site unaccounted for as yet. If developed out at these densities there could be approximately a further 110 dwellings delivered on the

remainder of the site (a 73 dwelling increase). In addition, the land-take in this layout suggests less land being taken up, in order to relieve the need to include large areas of the allocation site south of Moortown Lane. The result is a very much greater intensity of development than was considered in the design exercises undertaken at allocation stage. Design exercises that did take local context fully into consideration thus leading to the local plan's envisaged minimum dwelling numbers.

There is no objection in principle to increasing dwelling numbers, provided that this is accompanied by a demonstration of good design quality that ensures successful delivery in accordance with other local plan policies and guidance - notably Policy ENV3, Ringwood Local Distinctiveness SPD and Housing Design Density and Character SPD. The parameter plan has no clear rationale or justification through the supporting information and is at odds with local densities.

Scale

In terms of design, the appropriateness within the landscape, or along the countryside edge, of the proposed storey heights has not been explained or justified. From examining the local character, it is apparent that most if not all buildings are low lying across this and adjacent areas of the river terraces. However, there is no part of the application to suggest that the designer acknowledges the local use of bungalow and 1 ½ storey buildings, some of which have been noted as particularly distinctive in the area. Three storey development has been proposed but has not been identified as either appropriate or characteristic in the area. Notwithstanding that, it might have been made more acceptable if justified through aspirations for some real 'place making' but in this instance is not

Detailed Design Comments

The intensity of development in the local area has not been analysed, either in terms of density or urban grain. The proposal is for a persistent increase in the intensity of development over that which is apparent locally. Some increase needn't necessarily be a problem, if a strong design rationale creating varied character, based in local context can be implemented. However, it will need justifying through the quality of design and no attempt to justify it has been made. What is proposed, though is an homogenous over intensification with no contrasts, no real highlights and no real sympathy with local character. Depths of blocks (many of them perimeter blocks) are rather shallow, making the delivery of functional streets, spaces and appropriate intensities of built form, difficult to achieve with dwellings of this depth. Block depths do not allow tree cover in a way that supports local distinctiveness. The intensity of development along every street is unrelentingly mediocre with little space in front of buildings to allow for the various uses that the street envelope should cater for, in a way that promotes the design of healthy streets (see Healthy Streets | Making streets healthy places for everyone). Wherever one stands, the effects of layering, underpinning a sense of intensity will be all pervading.

Street Hierarchy

There is little to differentiate one street from another in terms of hierarchy so that the opportunities to create a strong character and sense of place are missing. For example, there are no streets which one might call 'tree lined' in accordance with the NPPF para 136.

Boundary Treatments

The proposal shows boarded fence in a number of locations which are not appropriate.

Storage

There is no bin storage designed into the dwelling envelopes or shown in the rear garden spaces. Assuming that rear gardens is the intended location for bins to be put away between collections. It needs to be clear where and how comfortable and convenient rear garden access is intended.

Tree Planting

None of the streets are what one could consider tree lined in accordance with the NPPF aspiration. There is little room for tree planting either in rear garden groups or within courtyards behind some of the more intensely developed areas. Even where front gardens are intended to be a little deeper, there is still very little room for tree planting within the development envelope. There is a series of small green lung type spaces proposed within the development envelope which could help but it is not clear from the detailed area that they will be designed out with the appropriate quality. One such area contained by the houses numbers 82,83, 100 and 111-115 and 141 is not strong enough. These spaces appear as leftover ground rather than as valuable public greens, one of which has inexplicably been chosen as the location for an electricity substation which appears at random alignment to the streetscape - leftover space simply stuffed with planting to keep people out rather than to enhance.

Character areas

The design and access statement expresses the applicant's recognition of local character. However, this document appears to eschew the accepted and adopted assessment of local character, carried in the council's local distinctive SPD. No attempt to suggest any 'key defining elements' of local character is made.

Whereas one might draw some very valuable aspirations from such an exercise, possibly leading to justifying a lifting of building density and (in places) intensity together with the realisation of opportunities to create genuine character within the scheme and including an appropriate new countryside edge, no such aspirations are drawn.

To help define the character of each area, the applicant has attributed special characteristics to particular buildings – 'accent' and 'landmark' buildings. Such an approach can work in combination with a good level of 'background' consistency, clearly defined street characteristics and some clear reference points for the design of such buildings – either as part of groups or as references to locally characteristic building cues.

It is unclear as to what drives the design of the accent and landmark buildings the special characteristic seem to be merely cosmetic for the most part and only partial at that. The approach taken, whereby a front facing façade may have a treatment in terms of cladding, render or linear detail, which is different from other buildings of the same design will inevitably appear contrived.

The applicant has explained the special character as being either 'accent' or 'landmark' buildings. In reviewing the accent and landmark these do not lift the character sufficiently, and do not pick up on local and contextual buildings to derive design cues.

Architecture

The use of traditional detailing can be successful if drawn from local characteristics

and if used on buildings of traditional form and massing. However, if the detailing is inconsistent within the building, or suggests through its proportion and scale that it is false then the whole presumption that one is creating a traditional character is undermined. This is the case here.

Consistency in architectural language is important. The assumption made across the whole scheme is that rear aspects of houses do not matter and as a result we have buildings with all the richness that could have been given, through the use of detailing and materials, all stopping a metre or two round the corner from the front façades. This has an undeniable air of falseness. It does not carry the character or the sense of place through to those actually living in the neighbourhood so that courtyards, garden spaces, oblique views along streets and layered views through gaps, all display a reduction in quality away from the street façade. This does not support local distinctiveness - this is not 'building beautiful'.

There are many prominent examples such as plots 82, 83 and 100 and 101 but in fact the entire collection displays the impoverishment of the sides and rear aspects of buildings.

The distribution of chimneys appears to be somewhat random.

NFDC Conservation – no objection subject to conditions

The proposed works will protect the significance of the listed buildings at Moortown House and Crowe Farm. Condition suggested for the protection of the listed milestone on Moortown Road during works.

NFDC Environmental Health – no objection subject to conditions

Environmental Protection have no objection in principle to the proposed development as submitted subject to standard planning conditions 14a-14e being imposed. Additional commentary on pollutant linkages.

Environmental Health (Pollution) set out detailed comments on contaminated land, noise, construction impacts, lighting and air quality. Recommended conditions set out.

NFDC Waste – no objection

Wessex Water – no objection

No objection (March 2024). It is noted that the existing rising main routes have been added to the Drainage strategy plans and that Phase 1 does not conflict with the rising main corridors. The development layout does not propose buildings, structures or obstructions within the public sewer easements, and on that basis I confirm that we remove our holding objection.

Responses from the following consultees are available to read in full on the NFDC website. The following is a summary of the key issues raised.

Hampshire Constabulary Designing Out Crime Officer – comments (February 2022)

General comment received on design and the prevention of crime and disorder. Comments received, including two suggested conditions, include:

- Summary of design advice in the NPPF and PPG

- The need for dwellings to sit within private or semi-private spaces.
- The need for secure rear garden access (with key operated locks on some dwellings)
- The need for planting not to obscure surveillance in public open space
- The need for a suitable lighting condition

Morebus – Support (June 2022)

Morebus support the proposed development subject to:

- Developer funding to enable connectivity by Morebus route 38 or similar enabling more frequent connections to, through and outwith the development to Ringwood, St Leonards and Verwood with any consent outlining a phased improvement of bus services funded by the development;
- Any enhancement to bus services should be clearly set out by the LPA and included in the Section 106 agreement as part of any outline or full planning consent but also for short-term enhancements which should be met through the full planning consent – concurrently phased.
- Bus accessed carriageway widths within the development a minimum of 6.5 metres.

Hampshire and IOW Fire and Rescue Service - comments

General comment received on fire and rescue service, built environment, building regulations and legislation.

9 REPRESENTATIONS RECEIVED

117 letters of objection raising the following grounds, 6 comments and 2 letters of support. Where multiple objections have been made by the same individual or organisation these have been counted as one objection. The objections are grouped into subject areas for convenience.

Principle of Development

- Loss of Green Belt land.
- Loss of agricultural land.
- Too much development for Ringwood.
- Development should be subject to a local referendum.
- Ringwood should have been included in the New Forest National Park.
- Development could be accommodated within empty buildings in Ringwood Town Centre.
- Developments such as this are changing the fundamental character of Ringwood in an entirely negative manner.
- Council tax benefits the Council & not the people of Ringwood.

Housing

- There are old people in Ringwood and there are no bungalows which is needed in the town.
- Any future housing should be solely for young people in the Ringwood area to rent at reasonable prices.

- The housing mix appears weighted towards larger houses when everything in the local plan seems to point toward smaller, 1 and 2 bed homes therefore the plan does not meet the requirements set out in the local plan.
- People with families have no affordable housing available in Ringwood.
- We need to see housing put in place for under 50s
- 2.5 storey houses along the Western boundary

Infrastructure

- Insufficient capacity in local services such as doctors, ambulance, chemists, dentist, children's nurseries and veterinary surgeons.
- Insufficient capacity in local schools.
- Supermarkets are full.
- No cinema in Ringwood.
- Impact at school start and finish times because of the increased volume of traffic
- Capacity at the secondary school is tight.
- No facilities for teenagers.
- Additional infrastructure should be put in place before houses are built.

Highways and Access

- Traffic system / quality of roads in Ringwood are nowhere near ready for even more vehicles.
- Impact of additional traffic generation on Moortown Lane, Crow Lane, Crow Arch Lane, Christchurch Road and other local roads.
- Junction with Christchurch Road will be unsafe.
- Impact on A31 and its junctions.
- Extra traffic jams, noise and pollution arising.
- Local car parks are at capacity.
- No safe routes for walkers and cyclists.
- Roads are already heavily pot-holed.
- There is currently parking along the side of the Business park on the highway at times causing problems for motorists.
- The road from Moorcroft Lane to Burley Street will need an upgrade as this will be the route to the A31 rather than queue in Ringwood centre, to the chagrin of the houses on Crow Hill.

Ecology

- Damaging impact on the local ecosystem including loss of green fields and hedgerows.
- More development in Ringwood would bring more pressure from walkers/runners/dogs/bikes and cars causing even more erosion, pollution and wildlife disturbance (particularly to ground-nesting birds) to an already vulnerable Conservation Area and Site of Special Scientific Interest.
- Loss of green space and the effects which this has on local wildlife and the mental wellbeing of local people.
- Proposal should enhance local wildlife.
- This proposal involves relocation which does not seem to me to satisfy the enhancement policy.

Flooding and Drainage

- Potential additional flood risk.
- Flooding is causing erosion.

- Inadequate sewerage system in the town and current surcharges.
- Sewage pumping station is already at full capacity and tankers used last winter at Bickerley pumping station.
- Concerns about sewage facilities ability to cope with this development in addition to Linden Homes and Site 14.
- The sewage company is already subject to inquiry concerning the dumping of raw sewage into the River Avon.

Open Spaces

- A ribbon of publicly owned land separating the new development from the existing homes on the western side is needed.
- Object to loss of existing football pitches.

Design

- Designs and layout of the houses make little attempt to be sympathetic to the overall character of Ringwood and hence does not meet Local Plan policies.
- Housing is too dense

Amenity and other matters

- Proximity of new houses on western boundary to existing houses and no buffer zone as requested.
- Overlooking and loss of privacy.
- Noise, dust and fumes from construction.
- Increase in crime.
- Loss of views.
- Impact on property prices.

10 PLANNING ASSESSMENT

10.1 Principle of Development

Local Plan Policy Strategic Site 13: Land at Moortown Lane, Ringwood

Local Plan Policy STR3 (The Strategy for locating new development) sets out that the strategy is to locate and direct new development to accessible locations that help to sustain the vitality and viability of the towns and villages of the Plan Area as the focal points of commercial activity and community life, and as safe, attractive and accessible locations to use and visit.

Local Plan Policy STR5 (Meeting our housing needs) sets out the strategy for delivering new homes in the District and that provision will comprise at least 6,000 new homes on Strategic Site Allocations in accordance with Strategic Site Allocation Policies SS1 to SS18.

The key planning policy that covers this site is set out in Local Plan 2016-2036 Strategic Site SS13 which is set out in full below. The supporting text and concept masterplan for Policy SS13 is set out on pages 152 to 154 of the Local Plan. Policy SS13 forms part of the Development Plan and is the starting point for consideration under Section 38(6) of the Act as set out above. Policy SS13 should be read in conjunction with all policies in the Development Plan rather than in isolation.

Strategic Site 13: Land at Moortown Lane, Ringwood

- i. Land to the north of Moortown Lane, Ringwood, as shown on the Policies Map is allocated for residential-led development and will comprise the following:
 - At least 480 new homes and public open space dependent on the form, size and mix of housing provided.
 - Retention of about two hectares of allocated employment land adjoining Crow Arch Lane Industrial Estate in the north-west corner of the site.
 - Provision of land for a minimum of 15 full size allotment plots within the site in order to provide for local needs arising from the development and in the wider community.
- ii. Land in the Green Belt to the south of Moortown Lane, Ringwood as shown on the Policies Map is allocated for the following supporting uses to enable allocated land north of Moortown Lane to deliver the minimum number of homes required:
 - The provision of natural recreational greenspace and public open space (including outdoor sports facilities).
 - Two hectares of land to be reserved for a primary school.
- iii. The masterplanning objectives for the site as illustrated in the Concept Master Plan are to create a well-designed and integrated southern extension of Ringwood by:
 - a. Providing natural greenspace corridors that connect the new residential areas to the town and to the countryside, linking the greenspace provision to the north of Crow Arch Lane with the recreational greenspace and playing fields area south of Moortown Lane.
 - b. Providing a hierarchy of connected streets that enable the through-movement of local traffic between the B3347 Christchurch Road and Crow Lane, including a vehicular connection through Forest Gate Business Park to link through to the town centre area, and a new north-eastern access point from Crow Lane towards the A31.
 - c. Providing a community focal point in a prominent location including ground floor premises suitable for community use.
 - d. Integrating sustainable drainage features to manage water course and surface water flood risks in the eastern part of the site.
 - e. Enhancing the character of Moortown Lane with public open space provision and planting so that Moortown Lane is a strongly defined new Green Belt and settlement edge.
- iv. Site-specific considerations to be addressed include:
 - a. The preparation of a detailed site-specific Flood Risk Assessment (FRA) will be required which should demonstrate that there will be no inappropriate development within Flood Zone 3b.

- b. Provision of a new connection to the Ringwood Sewage Treatment works with sufficient capacity to serve this site and to also serve and provide a point of connection for Strategic Site 14: Land to the north of Hightown Road.
- c. Assess the need for enhancements to the Moortown Lane junctions with the B3347 Christchurch Road and with Crow Lane, and where necessary, to other parts of the local highways, pedestrian and cycle network.

In this instance, the application site does not include all of the Local Plan Allocation site. The residual areas of the Allocation Site not within the application site includes the following:

- employment land parcel in the north-west corner
- existing allotments and associated parking
- north-eastern quadrant south of Crow Arch Lane
- south-easternmost portion centred on the Bird of Prey facility; and
- central and southernmost portions of the open space south of Moortown Lane

The application site itself includes highways land outside of the Local Plan Allocation Site. The highway land to the west and north is within the Ringwood settlement boundary. Some of the highway land on Moortown Lane is within the South West Hampshire Green Belt – see section (iii) below.

As such, the principle of development is established by the SS13 site allocation in the New Forest District Council Local Plan 2016-2036 Part One: Planning Strategy.

Environmental Impact Assessment (EIA) Development

The Council provided an EIA Screening Opinion to the applicant on the Proposed Development on 7 April 2021. The Screening Opinion concluded that the Site can be considered independently from the HCC-owned sections of the SS13 allocation and, in isolation or alone, the proposal would not be likely to have significant effects on the environment by virtue of factors such as nature, size or location.

However, the Council considered that the SS13 site(s) will result in a significant intensification of the land (both individually and cumulatively) and that when taken into account with other approved / proposed developments within the local area (notably Local Plan Allocation Site SS14 North of Hightown Road and Local Plan Allocation Site SS15 proposed development at Snails Lane, there is the potential that the proposed developments will cumulatively result in significant effects on the environment (both positive and negative). Potential effects on landscape and urbanisation, traffic and transport, ecology and noise and air were highlighted in the Opinion. On this basis, NFDC concluded that the proposed development comprises Environmental Impact Assessment (EIA) development and hence should be supported by an Environmental Statement (ES).

Accordingly, an ES prepared under the Town and Country Planning (Environmental Impact Assessment) Regulations 2017 (as amended) (the EIA Regulations) (Campbell Reith; December 2021) was prepared and submitted with the application material. A subsequent EIA Statement of Conformity (Campbell Reith; June 2023) was provided to NFDC in light of subsequent changes to the description of development. The EIA Statement of Conformity concluded that a review confirmed that there have been no material changes in baseline that would have potential to change the assessments of likely significant effect. Similarly, the nature of the amendments to the proposed development will not lead to any changes in the assessment of likely significant effects within the ES. The amended proposed

development is therefore considered to be in conformity with the submitted Environmental Statement. NFDC Officers did not raise any objection to the conclusions of the EIA Statement of Conformity.

Therefore, the conclusion of the April 2021 EIA screening opinion remains valid, and the application therefore continues to be deemed to be EIA development and hence NFDC must take

Additionally, the national Planning Practice Guidance (PPG) sets out that:

In this instance, the application has been supported by both an ES and a Habitats Regulation Assessment (HRA) and as such a co-ordinated approach is considered to have been taken in principle by the applicants. The HRA is addressed later in the Committee Report.

South-West Hampshire Green Belt

Local Plan Policy ENV2 (The South-West Hampshire Green Belt) sets out that the openness and permanence of the South-West Hampshire Green Belt will be preserved with particular regard to its stated purposes and those of national policy for the Green Belt. Development proposals in the Green Belt will be determined in accordance with national planning policy.

NPPF (December 2023) Section 13 (Protecting Green Belt land) sets out national planning guidance on development and the green belt. NPPF Paragraph 155 sets out that certain other forms of development are also not inappropriate in the Green Belt provided they preserve its openness and do not conflict with the purposes of including land within it. These include, amongst other things, engineering operations and local transport infrastructure which can demonstrate a requirement for a Green Belt location. The national PPG sets out further

The PPG sets out what factors can be taken into account when considering the potential impact of development on the openness of the Green Belt. These include, but are not limited to:

-

No proposed buildings are in the South West Hampshire Green Belt. In line with the Movement and Access Parameter Plan, the proposed development in this area is limited to highways and access works including the new site vehicular and cycle/pedestrian accesses, road widening, cross points, and new footpaths/cycle routes.

The supporting Environmental Statement (Campbell Reith, Volume 1 Chapter 9: Landscape and Visual Assessment, December 2021) ('LVIA') sets out in paragraph 9.1.1.1 that:

During construction Moortown Lane will form the primary point of access to the Site for construction traffic for all phases. With this, receptors will experience an increase in (construction) traffic along this road route, as well as close-ranging construction activity within the Site itself (Phase 1 in particular) – this will be evident across the entire route between Crow Lane and Christchurch Road, although marginally less across the eastern half due to this being adjacent to the areas of Public Open Space (rather than built form). There will also be construction impacts resulting from the changes to the junction with Christchurch Road. Overall, a very high magnitude of change is expected as a result of both Phase 1 and the wider site, resulting in a major/moderate adverse level of effect.

L VIA Paragraphs 9.136-9.137 set out:

At Year 1 the context of the route (Moortown Lane) will have altered entirely, with a change from a route running through an agricultural landscape (albeit one close to an emerging and existing settlement edge) to one which runs through parkland area of POS associated with the Proposed Development. This change will be stark, and with mitigation planting not matured the change is anticipated to remain very high.

However, at Year 15 the landscape proposals will have matured extensively and would provide additional 'softening' to the proposed development, which itself would have become an established part of the local landscape. In addition, the built form would have 'mellowed' and a community established which would provide additional resource for users of this route, which previously only provided a linear route providing access to the countryside of the south. In this context the change anticipated is marginally reduced by year 15 to high, but still considered to be at a major/moderate (and significant) level of effect.

L VIA Paragraphs 9.138-9.140 set out:

The Proposed Development will see the partial removal of the roadside hedgerow in two sections along the southern boundary of the section of the Site north of Moortown Lane, to facilitate vehicular and pedestrian access points as part of 'Phase 1', and considerable changes to the field parcel north of the road with the addition of built form and public open space. The Proposed Development will extend the presence of built form alongside this road route, from the current settlement edge of Ringwood along Christchurch Road to approximately halfway across the currently open field. Receptors using this route will experience the clearest views of the Phase 1 area of development, screened only in part by existing roadside vegetation and provision of new tree planting associated with the adjacent POS buffer.

With the partial removal of the Site boundary hedgerow and addition of new properties, and the use of Moortown Lane as a main access point, the Proposed Development will notably change the character of views when travelling between the two site parcels (represented by Photoviewpoint EDP 8), though will not be entirely out of character with existing built form experienced as the route and associated receptors move between areas of built form along Crow Lane and Christchurch Road. The presence of the POS areas and tree planting along the southern side of the main development blocks (including Phase 1), and the set back of properties partially from the road route to reduce the influence upon receptors aid the integration into the agricultural fields to the south-west.

When using this route new development would be prominent over the western parts, and less so over eastern parts, although there would still be a fundamental change to the route overall. Given the existing context of built form it is anticipated that a very high magnitude of change would be experienced as receptors pass adjacent to the Site, leading to a moderate/minor level of effect as a result of new development is anticipated for receptors using this route.

New tree planting within the streetscapes of development and the new landscaped frontage along Moortown Lane will have had time to mature by Year 15, giving this edge/entrance to development a much greener, softened appearance, which would be further softened along the eastern parts of the road adjacent to the POS area. Vegetation proposed within the POS would also have matured and softened the overall appearance of the eastern development blocks, and the entire development when viewed from some locations. With this in mind, it is expected that the

anticipated magnitude of change would reduce slightly to high at Year 15, resulting in a moderate level of effect upon receptors as a result of the Proposed Development.

As such, the LVIA is clear that the most significant visual impacts are associated with proposed housing (which is outside the Green Belt) but that the use of Moortown Lane as a main access point and the removal of some vegetation will have visual impacts on the northern side of Moortown Lane. The visual impact on the southern side of Moortown Lane will be less taking into account the public open space and planting. The LVIA also clearly emphasises that long-term visual impacts along Moortown Lane will be softened as new planting matures. The LVIA does not conclude that the proposed highways and access works on Moortown Lane would in isolation have a significant visual impact.

As such, it is considered that the visual impacts of the proposed highway and access development within the South West Hampshire Green Belt would be modest and over the longer-term would be tempered by a context of maturing new planting and hence some. Given that there are no proposed buildings in the South West Hampshire Green Belt, there would be no volumetric impacts. There would however be a notable increase in traffic generation along Moortown Lane associated with the construction and eventual occupation of Local Plan Strategic Site 13.

Therefore, the impact of the highways and access development proposed within the South West Hampshire Green Belt on the openness of the Green Belt would be modest and in the context of the facilitation of a Local Plan Allocation Site.

NPPF paragraph 143 sets out that the Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Housing Land Supply and NPPF Tilted Balance

In determining planning applications there is a presumption in favour of the policies of the extant Development Plan unless material considerations indicate otherwise (Section 38(6) of the Act). Material considerations include the National Planning Policy Framework (NPPF).

NPPF Paragraph 11 clarifies what is meant by the presumption in favour of sustainable development. It states that for decision making it means:

- c. approving development proposals that accord with an up-to-date development plan without delay; or
- d. where there are no relevant development plan policies, or the policies which are most important for determining the application are out-of-date [8], granting permission unless:
 - i. the application of policies in this Framework that protect areas or assets of particular importance provides a clear reason for refusing the development proposed; or
 - ii. any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.

For reference, NPPF (p. 6) Footnote [8] above sets out:

This includes, for applications involving the provision of housing, situations where:

- a. the local planning authority cannot demonstrate a five year supply (or a four year supply, if applicable, as set out in paragraph 226) of deliverable housing sites (with a buffer, if applicable, as set out in paragraph 77) and does not benefit from the provisions of paragraph 76; or
- b. where the Housing Delivery Test indicates that the delivery of housing was below 75% of the housing requirement over the previous three years

In line with the NPPF planning applications registered before 19 December 2023, such as this application, do remain subject to the policies of the NPPF in relation to the requirement to demonstrate a five-year housing land supply. The Council, as of August 2024, cannot demonstrate a five-year supply of deliverable housing land. The latest published housing land supply figure is 3.07 years.

Additionally, the Housing Delivery Test (HDT) results reported to NFDC Cabinet on 1 May 2024 set out that for the three-year period 2019/20 to 2021/22 the Council achieved a score of 92% against the housing requirement for the period. The Planning Authority has since prepared a Housing Action Plan to address the HDT result.

Footnote 8 to the NPPF paragraph 11 is clear that in such circumstances where a five year supply of deliverable housing sites is not demonstrated those policies which are most important for determining the application are to be considered out-of-date meaning that the presumption in favour of sustainable development in paragraph 11d is engaged.

For reference, this policy position was illustrated in the recent appeal decision at Orchard Gate, Noads Way, Dibden Purlieu (Appeal Ref: APP/B1740/W/23/3324227), received on 16 January 2024. That Appeal Inspector concluded that permission should be granted as paragraph 11(d) of the NPPF was engaged due to the lack of a 5-year housing land supply and an appropriate balancing exercise was undertaken.

As such, it is considered that in this case the development must be considered in accordance with the NPPF paragraph 11(d).

Taking the first limb of paragraph 11(d), as this report sets out, in this case there are specific policies in the NPPF which protect areas of assets of particular importance referred to within footnote 7 of the NPPF, namely habitat sites and heritage assets. Therefore, a judgement will need to be reached as to whether policies in the Framework provide a clear reason for refusing the development. Where this is found to be the case, the development should be refused.

The second limb of paragraph 11(d), namely whether the adverse impacts of granting planning permission would significantly and demonstrably outweigh the benefits when assessed against the policies of the NPPF taken as a whole (the so called 'tilted balance'), will only apply if it is judged that there are no clear reasons for refusing the development having applied the test at Limb 1.

The following sections of the report assess the application proposal against this Council's adopted local planning policies and considers whether it complies with those policies or not. Following this Officers undertake the Planning Balance to weigh up the material considerations in this case.

Summary

The application site is part of Local Plan Allocation Site SS13 (Land at Moortown Lane) and therefore the principle of development is established. The proposed residential development is located north of Moortown Lane on land that was removed from the SW Hampshire Green Belt as part of the Local Plan process. Some of the proposed highways and access works on Moortown Lane and the existing pitches south of Moortown Lane are in the SW Hampshire Green Belt. These forms of development (engineering operations and local transport infrastructure) accord with Local Plan Policy ENV2 and NPPF paragraph 155 given that they would only have a modest identified impact on the openness of the Green Belt and would be in line with the purposes of the Green Belt given their function to assist the delivery of a Local Plan Allocation Site. The proposal is EIA development and is supported by an Environmental Statement.

The proposal could make a significant contribution to the Local Plan housing delivery strategy in line with Policy STR5 and the NPPF paragraph 11 tilted balance is therefore engaged and this will be assessed alongside the other relevant material considerations in the Planning Balance section of the Planning Committee report.

10.2 Housing

Local Plan Policy HOU1 (Housing type, size, tenure and choice) sets out that the strategy is to ensure that all residential development helps to address the diversity of housing needs of local people at all stages of life by providing a mix and choice of homes by type, size, tenure and cost. The policy objectives are to improve the diversity of housing choice, and to achieve an overall balance of housing provision in general accordance with housing needs evidence, (accounting for site specific material considerations).

The supporting text for Policy HOU1 includes Figure 6.1 (below) which sets out the broad direction for the split in percentages for 1-2 bed, 3 bed and 4+ bed new homes that should aimed to be achieved.

Figure 6.1: Indicative need for different sizes and tenures of homes

	1-2 bed	3 bed	4+ bed
Affordable rental homes	60-70%	25-30%	5-10%
Affordable home ownership	55-65%	30-35%	5-10%
Market homes	30-40%	40-45%	20-25%

Local Plan Policy HOU2 (Affordable Housing) sets out that there is a requirement of 11 or more dwellings to provide affordable housing as follows:

- i. In the rest of the Plan Area (*including Ringwood*) the target is for 50% of new homes to be affordable housing.
- ii. The tenure mix target is to provide 70% of affordable homes for rent, split equally between social and affordable rent, and 30% intermediate or affordable home ownership tenures including shared ownership

Where developers cannot deliver the level of affordable housing set by Policy HOU2 they need to submit a Financial Viability Assessment (FVA) to demonstrate why they

cannot make the development viable if the policy level of affordable housing is delivered.

Ringwood Neighbourhood Plan (2023-2036) (May 2024) Policy R5 (Smaller Housing) sets out that provision should be made for small dwellings with one and two bedrooms, in schemes of residential development where this can be achieved without detriment to the amenities and the character of the surrounding area and neighbouring properties. The number of small dwellings should be greater than 50% of the total in schemes of five or more dwellings.

Ringwood Neighbourhood Plan (2023-2036) (May 2024) Policy R6 (First Homes) sets out that affordable housing will be supported in new development in areas outside of the New Forest National Park as required by Local Plan Policy HOU2. Within that provision, a minimum of 25% of new affordable homes shall be provided as First Homes.

i. Housing Mix

The following housing mix for both Phase 1 (Full) and Phase 2 (Outline) has been agreed with the applicant. The housing mix is set out in Tables 1 to 3 below.

Table 1: Phase 1 (Full Application) Housing Mix

Tenure	Market	Social Rented	Affordable Rented	Shared Ownership	Total
1-bed	0	7	5	0	12
2-bed	15	11	11	11	48
3-bed	23	6	10	9	48
4+ bed	37	2	0	3	42
Total	75	26	26	23	150

Table 2: Phase 2 (Outline Application) Housing Mix

Tenure	Market	Social Rented	Affordable Rented	Shared Ownership	Total
1-bed	0	14	14	0	28
2-bed	98	4	3	8	113
3-bed	79	2	3	9	93
4+ bed	58	1	0	0	59
Total	235	21	20	17	293

Table 3: Housing Mix Phases 1 and Phase 2 combined

Tenure	Market	Social Rented	Affordable Rented	Shared Ownership	Total
1-bed	0	21	19	0	40
2-bed	113	15	14	19	161
3-bed	102	8	13	18	141
4-bed	95	3	0	3	101
Total	310	47	46	40	443

The proposed market housing mix for Phases 1 and 2 combined would provide 36.8% two-bed dwellings, 34.2% three-bed dwellings and 29% four/five bed dwellings. As such, the overall market housing mix provides sufficient two-bed market dwellings.

The market housing mix deviates slightly from the indicative percentages in Local Plan Figure 6.1 for 3 bed and 4+ bed dwellings. However, the provision of 102 three-bed and 95 4+ bed market houses on a site of this size is not considered to be excessive. In line with Policy HOU1, taking account of the edge-of-settlement location where the provision of larger family houses is reasonably expected, this is an acceptable level of both 3 bed and 4+ bed market houses.

The proposed affordable housing mix for Phases 1 and 2 combined would provide 69 smaller (1 or 2 bed) *affordable rental* (Social Rent and Affordable Rent combined) homes (which equates to 75% of the affordable rental total), which whilst slightly above the indicative percentages in Figure 6.1, is in line with the comments from NFDC Housing which confirms a high need in the District for this size of dwelling.

The proposal would also provide 11 social rent and 13 affordable rent larger (3 or 4 bed) houses in line with Figure 6.1. Likewise, the affordable home ownership housing mix is also considered to be broadly in line with Figure 6.1.

In this instance, the proposal provides 202 (45.6%) smaller (1 and 2 bed dwellings across all tenures) out of a total of 443 dwellings on an edge-of-settlement scheme. Essentially, this is considered to be an acceptable overall percentage of smaller housing units across all housing tenures taking into account the edge-of-settlement character of the application site.

Ringwood Town Council in their representation of April 2022 set out that regard should be had to the work undertaken by RTC's Neighbourhood Planning Teams regarding housing need in Ringwood – a bespoke Housing Needs Assessment (HNA) (Aecom, January 2022) is provided in Appendix A of that response. The findings of the HNA are noted including the Executive Summary (p. 6) which sets out that the recommendation for a 50% shared ownership and 50% affordable rent (affordable housing) tenure mix should be interpreted flexibly as there is an argument for a higher weighting on affordable rented products due to uncertainty about future rates of turnover, the need to meet a share of the District's needs, and the fact that much affordable home ownership is only affordable to above average earners in Ringwood.

The representations from Ringwood Town Council (RTC) set out that the proposed tenure mix of affordable housing is not compliant with RNP Policy R6, and that the proportion of small dwellings is not in accordance with RNP Policy R5.

As set out, the proposal will provide 202 additional smaller (1 and 2 bed dwellings) units across all tenures which equates to 45.6% overall across both phases. As such, the proposed number of smaller dwellings is, as set out, considered acceptable in line with Local Plan Policies HOU1 and HOU2 taking account of development viability and the character of the site and the opportunity the site provides to address need and demand for larger family housing across all tenures.

There is no requirement for 50% of sites to be smaller dwellings in Local Plan Policy HOU1 which essentially sets out a site-by-site approach that takes material considerations into account. RNP Policy R5 caveats the aim of securing at least 50% of homes as smaller dwellings on schemes of five or more units with the Policy setting out that this should be the aim where this can be achieved it is without detriment to the amenities and character of the surrounding area and neighbouring properties.

This element of Policy R5 also indicates that the 50% target should be balanced against these considerations and hence there is a planning judgement to be made by

the decision maker on this matter. In this instance, the proposal is only 19 units (4.4%) short of the target – which does not distinguish between market and affordable homes - in RNP Policy R5. Essentially, this is not considered to be a significant shortfall when balanced against other material considerations as set out in the report including the overall delivery of new housing.

It is noted that RNP Paragraph 5.31 sets out that (with regard to an on-line Ringwood Housing Survey in 2021) that from the respondents experience, Ringwood is lacking starter homes (1-2 bed), mid-priced 2-3 beds and Council/Housing Association dwellings.

This proposal, as set out, provides a combined total of 342 new 1-bed, 2-bed and 3-bed homes across all tenures. This includes 133 new dwellings combined across the three affordable housing tenures in Local Plan Policy HOU2 (please see below) and 141 3-bed houses across all tenures.

As Local Plan Policy STR5 explicitly sets out, the housing to be delivered, in part, through the eighteen strategic sites is to address the needs for the Plan Area i.e. the District as a whole - and not necessarily for individual settlements, parishes or neighbourhood plan areas. As such, it is considered that in this case no substantive evidence has been provided on the proposed housing mix which would clearly outweigh the Local Plan's strategic housing policies HOU1 and HOU2. The proposed market housing mix will be secured through a s106 planning obligation clause.

ii. Affordable Housing

The proposal sets out that 75 affordable (social rented, affordable rented and shared ownership) will be delivered in Phase 1. The siting of the proposed 75 affordable housing units in Phase 1 are identified in the Phase 1 Housing Tenure Plan (Pegasus, 20/3/2024, Ref: P21-1078_DE_003_0107_B). The proposal sets out a suitable distribution of affordable housing units across Phase 1 in line with Local Plan Policy HOU2 criterion (iv).

Applicant's Financial Viability Assessment

The applicants submitted a Financial Viability Assessment (FVA) (BNP Paribas) during 2023. The latest iteration (December 2023) is the version, along with a supporting costs appraisal, which was subject to the most significant scrutiny by the Council's viability consultant Dixon Searle Partnership (DSP) and informed their subsequent reports dated February 2024 and May 2024.

The applicants FVA (December 2023) concluded that:

The proposed development with 50% affordable housing (provided as 70% rented and 30% shared ownership) and taking into account the s106 and CIL requirements generates a significant deficit against the site's Benchmark Land Value (BLV). In order for the Proposed Development to be close to viable, the tenure mix of the affordable housing would need to be adjusted to 50% rent (all affordable rent) and 50% shared ownership, and the Section 106 costs reduced to nil. Alternatively, the overall percentage of affordable housing could be reduced to facilitate a Section 106 contribution if this is considered to be essential.

The applicants in their submitted viability assessment confirm that the proposed development is not policy compliant due in part to the significant development costs of bringing the site forward. This includes £5.3 million towards phosphate mitigation which is not required in the District outside those areas in the Avon Valley.

Officers considered that the reduction of s106 costs to nil in the December 2023 FVA was not an acceptable option given the need to ensure the proposal is a sustainable development in terms of the impact on local highways and infrastructure. Additionally, without suitable mitigation for the impact of the development on European Sites secured through a s106 the application would not meet the Habitats Regulations. Likewise, the option of only affordable rent tenure and no social rent tenure was clearly not compliant with Policy HOU2 and would not meet the District's broad housing needs which include social rented housing.

Applicant's Revised Affordable Housing Offer

In February 2024 the applicants made a without prejudice offer via email of 30% affordable housing (against the 50% policy target) across the whole application site with a Policy HOU2 compliant tenure split ie. 35% social rented, 35% affordable rented and 30% shared ownership, whilst also committing to the s106 package. This offer is set out in Tables 1 to 3 above and would provide 133 affordable dwellings across all tenures and unit sizes.

Essentially, Officers considered that the proposed affordable housing offer compares favourably with other recent approvals on Local Plan strategic sites in the Avon Valley area in the District in terms of both overall percentage and tenure mix.

Independent assessor comments (February and May 2024)

The applicant's FVA has been reviewed by the Council's viability consultant Dixon Searle Partnership (DSP) for a full independent appraisal. This also includes a Quantity Surveyor (ERMC) assessment of infrastructure and build cost assumptions and they have engaged with the applicant and their Quantity Surveyor regarding the external/abnormal costs. Although there is not complete agreement on the costs detail, ERMC have confirmed that the overall costs included within BNP FVA are at an acceptable level – the revisiting of costs lead to a shared view between both parties on a build cost estimate level to go into the appraisal - and Officers understand the applicant has agreed this position for the purposes of this FVA.

DSP has considered these costs together with the suggested Benchmark Land Value (BLV), house prices, the receipts forecasted to be generated and profits levels sought.

DSP took these considerations into account in their report and concluded that:

Recapping, the application proposal is partly in detail but includes a significantly greater proportion of new homes submitted in outline than in detail and the scheme content, design and related viability assumptions could change over time – it could be some time before the actual delivery proposals are settled for the full scheme and the site comes forward.

'Stepping back' and viewing the submitted viability assumptions as a whole, and noting the sensitivity results above, we consider that the scheme clearly supports the now proposed 30% affordable housing of an appropriate tenure mix, with all of the updated s106 costs, and the stated phosphate costs, while also leaving notable scope for other scheme costs or negative viability influences to impact before this picture changes.

Overall, it appears the Council will have to take a view on the balance between scheme deliverability and the delivery of community benefits in the context of the inevitable uncertainties/potential tolerances etc. involved in doing so at a largely

outline and relatively early stage; and may also wish to consider whether viability can be revisited at a suitable point in the project if a satisfactory agreement providing the necessary certainty and confidence all round in the delivery (including of the AH and other s106) cannot be reached.

As such, on balance of considerations including the DSP report and the need to deliver housing in the round, Officers are minded that it is prudent to accept the revised February 2024 offer which would, subject to a s106 planning obligation, secure 133 Affordable Housing dwellings (30%) with a Policy HOU2 compliant tenure mix and Figure 6.1 typology mix across the application site (as set out in Table 3 above).

The proposal would provide 75 affordable dwellings in Phase 1 and 58 affordable dwellings in phase 2. The revised proposal has the support of the NFDC Housing Initiatives Manager and there does not appear to be any over-riding need to revisit the viability of the scheme at a later date.

First Homes

The Council has set out in its “First Homes Advice Note” that it does not require First Homes to be provided and in this case the applicants proposal reflects this fact.

The NFDC First Homes Advice Note, reflecting the PPG, sets out that First Homes are discounted market sale units which:

- must be discounted by a minimum of 30% against the market value;
- are sold to a person or persons meeting the First Homes eligibility criteria;
- are physically indistinguishable from equivalent market homes in terms of size and quality;
- on their first sale will have a restriction registered on the title at HM Land Registry to ensure this discount (as a percentage of current market value) and certain other restrictions are passed on at each subsequent title transfer; an
- after the discount has been applied the first sale must be at a price no higher than £250,000 (outside Greater London).

If First Homes – a specific kind of discounted market sale housing - were to be provided the Council’s First Homes Advice Note is quite clear that First Homes could be an alternative to complying with the tenure requirements of policy HOU2 providing the offer is in full accordance with the government guidance on First Homes. This consideration is specifically addressed in the national PPG and suggests that in the event of First Homes being provided both the affordable rent and shared ownership tenures could be significantly reduced. This likely reduction in the level of Affordable Rent and Shared Ownership secured in the event of First Homes comprising 25% of the overall affordable housing is also set out (as an example) in paragraph 8.5 of the Council’s First Homes Advice Note.

If a minimum of 25% of the affordable housing were to be secured as First Homes this would result in the loss of at least 34 of the 86 affordable rent (46 units) and shared ownership (40 units) homes proposed and hence would provide a reduced combined quantum of these tenures of at most 52 dwellings.

Moreover, as set out after the 30% discount has been applied, the first sale must be at a price no higher than £250,000. As such, with a 30% discount only new homes with a (pre-discount) market value of £357,143 would likely be available through the First Homes initiative. For reference, as of August 2024, some new build two-bedroom houses on Local Plan Strategic Site Allocations in nearby Fordingbridge are

being marketed for £390,000 and new build two-bedroom flats in nearby Verwood (in the Dorset Council Area) are being marketed for £255,000.

As such, it is considered at this time it is possible that a minimum of 25% First Homes may not include any two-bedroom houses given their market value in the local area and clearly no larger (3-bed or 4-bed) First Home houses would also likely be secured.

As such, given local new build market values in the local area, and the current 30% discount, any First Homes could likely be only 1-bed or 2-bed flats.

Therefore, in this application that could result in the loss of at least all of the 1-bed Affordable Rent units (19) and a significant proportion (15 out of 33) 2-bed Affordable Rent and Shared Ownership 2-bed dwellings.

The Written Ministerial Statement issued on 30 July 2024 is itself a material consideration indicating the direction of travel of national planning policy. For reference, The Court of Appeal in *Cala* [2011] EWCA Civ 639 held that [t]he prospect of a change in planning policy is capable of being a material consideration and that the weight to be given to any prospective change in planning policy will be a matter for the decision-maker's planning judgment in each particular case.

The Written Ministerial Statement (30 July 2024) sets out with regard to Affordable Housing:

Proposed changes to the National Planning Policy Framework (NPPF) were also published on 30 July 2024. The draft NPPF (July 2024) is also a material consideration but the weight to be attached to it is likely to be quite limited at this time as it is still subject to consultation and may change following public consultation.

Proposed changes to the National Planning Policy Framework (NPPF) were also published on 30 July 2024. The draft NPPF (July 2024) is also a material consideration but the weight to be attached to it is likely to be quite limited at this time as it is still subject to consultation and may change following public consultation.

Notwithstanding this, the Government's supporting online NPPF consultation document (July 2024) sets out:

- An expectation that housing needs assessments explicitly consider the needs of those requiring Social Rent and that authorities specify their expectations on Social Rent delivery as part of broader affordable housing policies. We expect that many areas will give priority to Social Rent in the affordable housing mix they seek, in line with their local needs, and this is something we strongly support, but we will not be prescriptive, it is for local leaders to determine the balance that meets the needs of their communities.
- In line with this, we propose removing the prescriptive requirements relating to affordable home ownership products. Currently, home ownership products are prioritised over homes for affordable rent, with particular priority given to First Homes. We are clear that we must take steps to boost home ownership and the actions set out in this document will do just that – but the prescriptive prioritisation of these particular types of affordable housing in existing policy is not the right approach. It can force unhelpful trade-offs, especially in areas where, for example, Social Rent and Affordable Rent are most needed,

- For this reason, we propose removing the requirement to deliver at least 10% of the total number of homes on major sites as affordable home ownership, as set out in paragraph 66 of the current NPPF. We also propose removing the requirement that a minimum of 25% of affordable housing units secured through developer contributions should be First Homes, as set out in the 'Affordable Homes Update' Written Ministerial Statement of 24 May 2021.
- First Homes would remain a type of affordable housing and an option for delivery where local planning authorities judge this to be appropriate for local needs, including through First Homes exception sites and through s106 developer contributions, and we propose reflecting this in the NPPF Glossary definition of affordable housing. We are also proposing to remove Starter Homes from the same definition given First Homes was a replacement for this scheme

NFDC Housing has confirmed that (as of early August 2024) there are 2039 households on the Council's Housing Register. NFDC Housing caveat that this represents only those households positively identifying as being in affordable housing need (ie. they have applied to the NFDC Housing Register) and does not likely represent the full extent of the affordable housing need in the area. NFDC Housing has also confirmed that (as of early August 2024) there are 205 households who identified Ringwood as their area of First Choice in the Council's choice-based lettings.

Additionally, NFDC Housing has confirmed that (again as of early August 2024) there are 651 households registered on the NFDC Shared Ownership interest list who have a confirmed interest in Shared Ownership with the Council.

As such, there is a very clear District need for the proposed 133 affordable housing units across the three tenures set out in Local Plan Policy HOU2.

Additionally, the new Government has set out in its July 2024 Written Ministerial Statement the proposed emphasis on securing affordable rent and social rent tenure affordable housing and the removal of the prescriptive requirements relating to affordable home ownership products which includes the First Homes requirement of 25% of all affordable housing secured.

Officers acknowledge that the proposal does not meet the second sentence of RNP Policy R6 (First Homes) which sets out that within the provision (of affordable housing) a minimum of 25% of new affordable homes shall be provided as First Homes. For reference, the supporting text of the RNP Policy R6 (Paragraph 5.38) sets out that the local housing needs evidence prepared for the Neighbourhood Plan does not consider First Homes to be currently affordable for those households on average or lower incomes – but a couple with joint incomes who fall within the First Homes household income limit of £80,000 per annum may well be able to afford a First Home discounted price dwelling.

The Ringwood Housing Needs Assessment (HNA) (AECOM, January 2022) sets out (Paragraph 72) that:

- This report has estimated the income required to afford First Homes and tested the implications of 30%, 40% and 50% discount levels. For each level (30%, 40% and 50%) it is not possible for average earning households to access First Homes at the price points assumed here, even with a 50% discount.

The Ringwood Housing Needs Assessment (HNA) (AECOM, January 2022) also sets out (Paragraph 74) that:

- It remains clear that the maximum discount level of 50% is generally necessary to bring First Homes (nearly) within reach of average earners. As such, this is recommended as the discount level most appropriate to local needs, despite the fact that First Homes will primarily serve those on higher average earnings rather than their intended target market.

As such, not only could delivery of at least 25% First Homes as set out in RNP Policy R6 reduce the overall number of affordable housing units in the three tenures set out in Local Plan Policy HOU2 from the 133 proposed but could also likely be impacted further by the need to discount the First Homes at a rate of 50% - if average earners were to potentially access these housing products,

Therefore, in recognising the conflict with the Neighbourhood Plan, a recommendation on 'balance of considerations' needs to be made. In this instance, the proposed affordable housing tenure mix conforms with Local Plan Policy HOU2 i.e. 35% social rent, 35% affordable rent and 30% shared ownership. NFDC has set out a position that it does not require First Homes to be provided in the publicly available "Advice Note" referred to above. This report has summarised that the District housing need for the three affordable housing tenures identified in Local Plan Policy HOU2 is and remains acute. The July 2024 Written Ministerial Statement set out that a potential direction of travel in national planning policy giving Local Planning Authorities greater discretion on the levels of affordable home ownership options including First Homes.

The NPPF December 2023 (Paragraph 30) is clear that once a neighbourhood plan has been brought into force, the policies it contains take precedence over existing non-strategic (emphasis added) policies in a Local Plan covering the neighbourhood area, where they are in conflict. In this instance, there is a conflict between Local Plan Policy HOU2 and RNP Policy R6 given the latter has a stipulation for a minimum of 25% First Homes.

However, it is considered that Local Plan Policies HOU1 and HOU2 are clear strategic policies setting out the Council's strategic housing policies in line with NPPF December 2023 Paragraph 20 criterion (a). As such, RNP Policy R6 cannot take precedence over Local Plan Policies HOU1 and HOU2 and should therefore be considered alongside them and in the balance of considerations as previously detailed.

Essentially, it is considered that cumulatively the material considerations set out above outweigh the requirement in RNP Policy R6 (First Homes) for a minimum of 25% of new affordable homes to be provided as First Homes.

In summary, the affordable housing offer is acceptable to NFDC Planning and Housing Officers both in terms of the overall offer which has been subject to viability review and the Policy HOU2 compliant tenure split.

Therefore, subject to a s106 planning obligation appropriately securing the affordable housing in perpetuity and a suitable condition for approved plans, the proposal accords with Local Plan Policies HOU1 and HOU2.

It is also noted that the completed Building for a Healthy Life Assessment appended to both representations from Ringwood Town Council received by the LPA in 2024

sets out additional commentary on housing mix under the heading 'Homes for Everyone'. Commentary on this matter along with all the other elements of the Building for a Healthy Life Assessment Ringwood Town Council forwarded is set out later in the Planning Assessment.

10.3 Highways, Access and Parking

Local Plan Policy CCC2 (Safe and Sustainable Travel) sets out that new development will be required to:

- i. Prioritise the provision of safe and convenient pedestrian access within developments, by linking to and enabling the provision of more extensive walking networks wherever possible, and where needed by providing new pedestrian connections to local facilities;
- ii. Provide or contribute to the provision of dedicated cycle routes and cycle lanes, linking to and enabling the provision of more extensive cycle networks and providing safe cycle routes to local schools wherever possible;
- iii. Consider and wherever possible minimise the impact of development on bridleways and horse riders;
- iv. Provide sufficient car and cycle parking, including secure cycle parking in schools and colleges, work places, bus and rail stations, and in shopping areas in accordance with the adopted Parking Standards Supplementary Planning Document;
- v. Incorporate infrastructure to support the use of electric vehicles; and
- vi. Provide, or contribute proportionately to the provision of, any highways or public transport measures necessary to enable the development to be accommodated in a safe and sustainable manner, including the requirements identified in any applicable Strategic Site Allocation Policies.

Local Plan Policy IMPL2 (Development standards) criterion vi sets out that provision should be made to enable the convenient installation of charging points for electric vehicles in residential properties and in residential, employee and visitor parking areas. Detailed guidance on vehicular parking, cycle storage and electric vehicle charging is set out in the NFDC Parking Standards Supplementary Planning Document (April 2022).

The Ringwood Neighbourhood Development Plan Policy R11 (Encouraging Active and Healthy Travel) sets out:

- A. The Neighbourhood Plan identifies the existing Sustainable Travel Network and opportunities for improvements, as shown on the Active Travel Policy Map, for the purpose of prioritising active and healthy travel.
- B. Development proposals on land that lies within or adjacent to the Network will be required, where practical, to provide opportunities for a more joined-up Network of walking and cycling routes to the town centre, local schools and community facilities and accessible green space by virtue of their layout, means of access and landscape treatment.
- C. Proposals for major development (10 dwellings or above) should adopt the Sustainable Accessibility and Mobility Framework, as illustrated, and demonstrate how they have, in the following priority order:

- i. sought to minimise the need to travel beyond the parish;
- ii. for longer trips, sought to encourage and enable the use of active, public and shared forms of transport; and,
- iii. for trips that must be made by car, sought to encourage and enable the use of zero emission vehicles.

The Ringwood Neighbourhood Development Plan Policy R1 (A Spatial Plan for Ringwood) criterion D sets out:

The harmful effects of traffic congestion, especially traffic with an origin and destination outside the town centre, will be tackled through the promotion of other means of moving about the town including the delivery of effective walking and cycling measures to better connect the new communities at Moortown Lane and Hightown Road.

The adopted Ringwood Neighbourhood Development Plan Policy R7 (Design Code) criterion iv. sets out:

Offer highly permeable residential layouts for cyclists and pedestrians moving within and through the development.

The application is supported by a Transport Assessment (Environmental Statement, Campbell Reith and I-Transport, Appendix 11.1, December 2021) and several subsequent updates (I-Transport, April 2023, January 2024 and March 2024). The Design and Access Statement (DAS) (Pegasus, May 2024) sets out additional detail on access and vehicular parking.

The Local Highway Authority (LHA) (Hampshire County Council) has been consulted extensively on the application and they have confirmed in their final response (12 April 2024) that they have no objection subject to a planning obligation and suitable conditions.

i. Site Vehicular Access

The application site's single vehicular access from Moortown Lane is set out in the submitted plan Moortown Lane Site Access (I-Transport, 19/7/2023, Ref: ITB-12364-GA-032 Rev. D). The access will be approximately 340 metres from the junction with Christchurch Road and includes a 3m wide shared use footway/cycleway. The LHA has no objection to the proposed access. It will be secured through the s106 and subsequently a s278. Completion of the vehicular access will be prior to the first occupation on Phase 1.

As set out in the 12/4/2024 response from the LHA, the proposal includes the widening of Moortown Lane between the junction with Christchurch Road and the proposed site access. This is set out in the submitted plan Moortown Lane Widening (I-Transport, 3/7/2024, Ref: ITB-12364-070 Rev. A) which is acceptable to the LHA.

HCC consider that the widening of Moortown Lane is necessary given existing over-running of the verge, the increase in vehicular movements arising from the proposal and the need to accommodate larger passing vehicles between Christchurch Road and the site access. The applicant has agreed to implement these improvements to Moortown Lane and will be secured through a s106 obligation. HCC has however set out that they would be willing to consider a monitoring framework for this proposed works during Phase 1, which would be secured through a s106 obligation. The cost of any works would be borne by the developer and not from the s106 highways contribution.

A Stage 1 Road Safety Audit (RSA1) has been provided for the internal layout. Subsequent design amendments have been carried out and the Safety Auditor has confirmed these amendments satisfactorily address the problems raised. The LHA accept the proposed internal layout, subject to any possible design revisions at the S38 detailed design stage where roads are being offered for adoption.

The proposed internal spine roads will be provided to the boundary of the application site to facilitate future connection to the two parcels which complete the NFDC Local Plan SS13 site allocation. This is clearly shown on the Movement and Access Parameter Plan (Pegasus, 19/1/2024, Ref: P21-1078-DE—004-0108). The LHA has set out that these roads should be designed and constructed to adoptable standards and offered for adoption.

Ringwood Town Council has set out in their 2024 responses that the proposal is contrary to the policy set out for SS13 in the Local Plan specifically because the only access will be from Moortown Lane. It is not within the gift of the applicants to secure an access through third-party land - Hampshire County Council owned in this instance - and as previously set out, the application site doesn't extend to the same extent as the site allocation which would limit the ability for the access to the north to be provided by this application.

However, the submitted plans identified suitable access up to the boundary with the HCC land holdings in the north-west and north-east of the Allocation Site and as such the proposal does not preclude these vehicular accesses being facilitated as and when the residual land within the Allocation Site is developed.

As such, subject to suitable conditions and a planning obligation, the proposed vehicular site access is considered acceptable in line with comments from the Local Highway Authority.

i. Site Access - Cycle/Pedestrian

The DAS (p.85) sets out that the development of an integrated pedestrian and cycle network within the site is a key part of the transport infrastructure for the site. The site will deliver non-motorised user access to both the north, south-west and south of the site. The proposed cycle/pedestrian accesses include:

- A centrally located southern pedestrian and cycle access at the main site access across to the land south of Moortown Lane (see submitted plan 'Moortown Lane Central Pedestrian and Cycle Access', I-Transport, 6/4/2021, Ref: ITB12364-GA-032D).
- A south-western pedestrian and cycle access to Moortown Lane close to Christchurch Road including a new length of footway on Moortown Lane to connect to Christchurch Road (see submitted plan 'Footway, Cycleway, Emergency Access onto Moortown Lane', I-Transport, 6/4/2021, Ref: ITB12364-GA-025E).
- A pedestrian access onto Crow Arch Lane (immediately west of the existing allotments) with off-site highway improvements to connect to Yarrow Lane and onto the Castleman trail - and hence local schools and facilities (see submitted plan 'Crow Arch Lane to Castleman Trail Pedestrian and Cycle Access, I-Transport, 6/4/2021, Ref: ITB12364-GA-008E)
- An additional pedestrian and cycle access (immediately east of the existing allotments) to enable a link to be provided to the public open space north of

Crow Arch Lane (in conjunction with further improvements in that open space) and hence the Castleman Trail (see submitted plan 'Pedestrian Crossing Point Crow Arch Lane, I-Transport, 6/4/2021, Ref: ITB12364-GA-038E)

- Pedestrian access improvements to the crossing at the junction of Crow Arch Lane and Crow Lane on the Castleman Trail (see submitted plan 'Crow Arch Lane/Crow Lane Pedestrian/Cycle Link – Option Two, I-Transport, 13/12/2023, Ref: ITB12364-GA-080B)
- An additional crossing point over Moortown Lane at the eastern end of the public open space to be delivered in Phase 2 (see submitted plan 'Proposed Eastern Pedestrian Access, I-Transport, 6/4/2021, Ref: ITB12364-GA-031E).

In addition, within the site is: the provision of an off-road shared use formal foot/cycleway (minimum 3m width) as part of the public open space and the ANRG, facilitating connections to adjacent public open spaces and the residual residential and employment land boundaries within the Allocation Site. There is also additional access through the existing Public Right of Way (PROW) footpath 45 route in Phase 2 from Moortown Lane to the SANG land to the north of Crow Arch Lane.

The submitted plan titled Indicative Walking and Cycling Route to Long Lane (I-Transport, 19/7/2023, Ref: ITB-12364-GA-077) will provide an off-road route between the proposed crossing on Moortown Lane from the housing development area to the existing sports pitches south of Moortown Lane, the land for which is within the control of the applicants. This will provide a new route parallel to Moortown Lane and connect to the existing five-bar gate at the junction of Long Lane and Moortown Lane. This will be delivered as part of the Phase 2 public open space and can be secured through a s106 planning obligation.

HCC Countryside Services has no objection subject to suitable conditions and a s106 contribution. The applicant has agreed a contribution towards ongoing maintenance and to re-surface Ringwood Footpath 45 which runs north-south through the east section of the application site (within the Phase 2 ANRG) which connects to Moortown Lane at the southern boundary.

HCC Countryside Services also confirmed that they would support a diversion of a short section of Ringwood Footpath 45 from its current alignment, which terminates on Moortown Lane slightly to the east of the proposed crossing point, to one that would line up with the crossing. This would enable walkers to safely cross the road between the PROW and playing fields to the south without needing to walk a short distance on the road or on the grass verge in front of the Four Views property. The requirement to apply for a diversion of the footpath is separate to the planning application process and will be addressed after the approval of this application through section 257 of the Town and Country Planning Act 1990.

The applicant has also agreed a s106 contribution of £69,000 for surfacing improvements to be undertaken on the length of Ringwood Bridleway 509 between Crowe Hill and Barrack Lane (to the south-east of the application site) which is part of the wider Castleman Trail.

Essentially, the package of cycle and pedestrian improvements, which would be secured through a s106 planning obligation and a s278 agreement, provides suitable links to the north, south and west. This would provide cycle and access to the town centre, Castleman Trail and the 'Ring 3' public open space. It would also provide cycle and pedestrian access to the sports pitches on the southern side of Moortown Lane and Christchurch Road.

ii. Highways Works and Traffic Impact

The LHA set out in their 12 April 2024 response that the traffic impact has previously been agreed at all appropriate locations except the B3347/ The Furlong roundabout junction close to the town centre. The LHA now confirm that the modelling provided is acceptable, and that a mitigation scheme as shown on the submitted plan (The Furlong Roundabout Mitigation Scheme Concept Design) (I-Transport, 14/7/2021, Ref: ITB12364-GA-043 Rev. B) is acceptable. This mitigation would widen the Southampton Road arm of the junction to allow a longer length of two-lane approach. The cost of this improvement would be funded from the overall s106 contribution sought by the LHA.

The LHA has confirmed that the design of the improvement works at the Moortown Lane and Christchurch Road priority junction as set out in the submitted plan titled Potential Moortown Lane Improvement Scheme – Priority Junction (I-Transport, 2/3/2021, Ref: ITB-12364-GA-023 Rev. E) is considered satisfactory.

Costs for the indicative walking and cycling scheme as set out in the submitted plan (WCHAR Improvements South) (I-Transport, 5/12/2022, Ref: ITB12364-GA-060) along Moortown Lane and Christchurch Road have also been agreed by the LHA. A proportionate contribution for the applicant to provide towards the scheme has been agreed and will be secured through a s106.

National Highways set out that their interest is the impact of the proposal on the A31. Of particular interest is the A31 / A338 Salisbury Road junction and the Poulner Interchange (Eastfield Ln /A31 On-Slip priority junction and the Mount Rd / Southampton Rd / A3 Slip roundabout junction). Their representation of 30 June 2023 confirmed that the safe and efficient operation of the strategic road network will not be significantly affected subject to a suitable condition (construction traffic management).

v. Vehicular parking, cycle storage and electric vehicle charging

The submitted plan Phase 1 Parking Plan (Pegasus, 10/4/2024, Ref: P21-1078-De-003-0105 Rev. B) sets out the vehicular parking strategy for the proposed 150 dwellings.

Each of the proposed one-bedroom flats has one vehicular parking space in a communal parking courtyard. Each of the proposed two-bedroom flats and house, both market and affordable tenure, has two parking spaces. Each of the three-bedroom houses, both market and affordable tenure, has at least two parking spaces. All the proposed four-bedroom and five-bedroom market houses has at least three parking spaces. The four-bedroom affordable houses are each provided with two surface spaces which is one space below the recommended standard of 3 spaces in the Parking SPD. The DAS and Phase 1 Parking Plan confirm that the proposal will also provide 13 visitor parking spaces in line with paragraph 4.6 of the Parking Standards SPD.

Essentially, the overall proposal provides a reasonable level of vehicular parking in line with the recommended provision set out in Table 1 of the NFDC Parking Standards SPD.

Vehicular parking will be provided through a combination of surface parking, car barns and garages. Suitable conditions are recommended to remove permitted development rights for the proposed garages and car barns to ensure a suitable level of parking is retained for the residential dwellings. The DAS confirms that garages will be provided at a minimum size of 3m x 6m in line with Table 2 of the NFDC

Parking Standards SPD.

The on-plot and courtyard surface parking design often include tandem parking solutions (one vehicle behind another) which are acceptable in line with paragraph 5.5 of the NFDC Parking Standards SPD. Officers do not consider that any of the parking arrangements would introduce any obvious additional hazards for other users over and above that generally associated with any moving vehicle.

It will be necessary to prevent ad hoc parking on grass verges and open spaces and this can be controlled through physical measures such as strategically placed bollards, ditches or boundary or grass bunds. The Phase 1 Masterplan sets out planting at the interface of the housing area and public open space. The detailed design for this can be secured through the proposed detailed landscape conditions.

The DAS (p. 88) confirms that cycle parking spaces for individual dwellings are either provided within the curtilage (flatted blocks with integral storage) of the dwelling, within a garage if available, or within a secure cycle store at the rear garden, at a rate of 2 no. spaces per dwellings in accordance with the NFDC Parking Standards SPD. The Phase 1 Parking Plan also sets out those dwellings which include a secure cycle store in the form of a shed in the rear garden. These can be secured through a suitable pre-occupation condition.

The DAS (p. 88) sets out that electric vehicle charging will also be provided so that one charging unit is supplied for each dwelling that has on-plot parking. For plots where parking is more remote, ducting will be provided to allow for future connection. The submitted Phase 1 EV Charging Plan (Pegasus, 10/4/2024, Ref: P21-1078-DE-003-0117 Rev. A) sets out the siting of the EV charger for each dwelling.

The provisions set out in the Phase 1 EV Charging Plan are in accord with NFDC Local Plan paragraph 9.21.

To address concerns raised over the impact of construction traffic on local general amenity, a Construction Traffic Management Plan (CTMP) will be secured through a suitable condition in line with the LHA recommendation.

vi. Sustainable Transport

The submitted plan Walking, Cycling and Horse Riding Assessment and Review (WCHAR) Improvements (I-Transport, 28/7/2022, Ref: ITB-12364-GA-049) sets out improvements to the highway network between the application site and Ringwood Junior School and Ringwood School. These improvements have been agreed with the LHA and would be funded from the overall s106 contribution sought by the LHA. In conjunction with the improvements set out in Crow Arch Lane to Castleman Trail Pedestrian and Cycle Route (I-Transport, 6/10/2020, Ref: ITB-12364-GA-008 Rev. H) this would provide a suitable link to local schools and the small shop at the Hightown Road roundabout and thus address the comments made by Ringwood Town Council in their February 2024 representation.

The original intention for public transport serving the application site was for an initially subsidised bus service. This is reflected in the 2022 representation submitted by Morebus. However, no satisfactory agreement was reached between the applicant, local bus operators and HCC Highways on a suitable bus service. HCC Highways view is that without a suitable public transport offer the approximately 700m walk (more for residents in the south of the site) is an unacceptable distance to reach the current Ringo 1 service on Castleman Way.

To overcome this issue, a contribution to the Local Highway Authority (HCC

Highways) to enable a taxi share service to be provided has been agreed. This will provide a realistic alternative to the private car for those future residents either unable or unwilling to walk to the Ringo bus stop. A taxi share will run at peak times and can be flexible to accommodate the future demand. The estimate cost of running a taxi share to serve the Moortown Lane site is £52,000 per annum. In order to instil sustainable travel patterns, we would want to guarantee operation of this service from early in the build out of the development until post final occupation. Therefore, I suggest the service is supported for 10 years, giving a public transport contribution of £520,000.

HCC Highways consider that it is a cost-effective way of serving the site by public transport. It also supports a hub and spoke approach, allowing convenient access to Ringwood bus station for onward, longer distance, journeys by bus. Given taxi services are tendered so HCC is only charged when a journey is undertaken, it would enable the site to be served by public transport from first occupation, instilling sustainable travel patterns from the outset.

HCC has used a similar scheme to this at the Barton Farm development site to the north of Winchester.

As such, the LHA has agreed with the applicant to provide a contribution to fund the running of a taxi share to serve the site. This would be funded from the overall s106 contribution sought by the LHA. For reference, the road network in Phase 1 can accommodate a bus service if one is facilitated in the future.

The proposal includes improvements to the local pedestrian and cycle network which will be accessible to both occupiers on the site and the wider local community. This includes connections onto the Castleman Trail and hence facilities to the north-west and south-east of the application site. Phase 1 includes a north-south off-road cycle route through the proposed public open space in line with the Active Travel Policy Map identified in Policy R12 criterion A.

Additionally, as set out, the Local Highway Authority (Hampshire County Council) has agreed a contribution from the applicant towards a subsidised taxi service to the town centre in lieu of a bus service operating within the site which facilitates sustainable travel for the less mobile. This proposed taxi service will therefore provide connections to local bus services and National Express services to London provided in the town centre. The proposal includes a contribution towards highway improvements between the application site and local schools. The applicant will provide electric charging points for all dwellings to assist the facilitation of the transition away from hydrocarbon fuel vehicles to electric vehicles.

As such, the proposal broadly accords with the Ringwood Neighbourhood Development Plan Policies R1, R7 and R12.

It is also noted that the completed Building for a Healthy Life Assessment appended to both representations from Ringwood Town Council received by the Council in 2024 sets out additional commentary on highways, access and parking. Commentary on these matters is set out later in the Planning Assessment.

v. Summary

The proposal has an acceptable vehicular site access and a suitable network of pedestrian and cycle routes that provide through off-road connections and, as such, the Movement and Access Parameter Plan (Pegasus, 19/1/2024, Ref: P21-1078-DE—004-0108) is considered to be acceptable for approval.

The LHA has no objection to the traffic impacts subject to highway improvements including the junction of Moortown Lane and Christchurch Road. The proposal includes vehicular accesses to the boundary with the residual land parcels in the Allocation Site and as such would not preclude the future facilitation of through routes in line with Policy SS13. The LHA has found the Stage 1 Road Safety Audit (RSA1) for the application site acceptable in principle subject to the later s38 detailed design stage.

The on-site vehicular parking, cycle storage and electric vehicle charging is acceptable. Off-site access improvements will connect the site to local schools, the town centre and public open space. Improvements to local public rights of way through planning obligation contributions have been agreed. Construction traffic management can be secured through a suitable condition. A contribution towards a subsidised taxi service to the town centre in lieu of a bus service operating within the site facilitates sustainable travel.

HCC Highways has confirmed that the final set of trigger points for commencement and conclusion of the identified off-site highways and access improvements will be determined through the finalisation of a supporting s106 planning obligation and subsequent s278 agreement. The site access and the Crow Arch Lane pedestrian/cycle access to the north will be delivered prior to the first occupation in Phase 1.

Therefore, subject to a s106 planning obligation and suitable conditions, the proposal accords with Local Plan Policies CCC2, IMPL2 and SS13 criteria (iii)(a) and (iv)(c). The proposal does not preclude the future delivery of SS13 criteria (iii)(b) and supports that future delivery of that objective as far as is reasonably possible through the proposed highway design.

10.4 Flood Risk, Surface Water Drainage and Foul Drainage

Local Plan Policy CCC1 (Safe and Healthy Communities) criterion (iv)(b) sets out that in the interests of public safety, vulnerable developments will not be permitted, inter alia, in areas at risk of flooding unless in accordance with the sequential and exception tests.

Local Plan Policy SS13 (Land at Moortown Lane, Ringwood) sets out site-specific criteria iii (d) on sustainable drainage and iv. (a) the need for a Flood Risk Assessment which demonstrates that there will be no inappropriate development within (fluvial) Flood Zone 3b.

The NPPF (December 2023) paragraphs 165 to 175 and Annex 3 (Flood risk vulnerability classification) sets out further guidance on planning and flood risk.

i. Flood Risk and Surface Water Drainage

The applicants have provided a Flood Risk Assessment and Drainage Strategy (FRA) (Hydrock 2/12/2021). This has been supplemented by further addendums in June 2023, January 2024, February 2024 and March 2024.

Local Plan Allocation Site SS13 includes areas within the functional floodplain (Environment Agency Zone 3b) in its easternmost portion immediately west of Crow Lane. In this application, the proposed residential development is located entirely within EA fluvial flood zone 1 i.e. land with the lowest probability of fluvial (river) flooding. As such, the proposal locates residential development in the sequentially preferred location of the lowest potential fluvial flood risk in line with the guidance in the NPPF.

The NPPF Annex 3 confirms that amenity open space is water-compatible development and as such that part of the proposed Phase 2 public open space in the eastern portion of the Allocation Site is acceptable in principle. For reference, the detailed design of this area will be determined through a subsequent Reserved Matters application.

The applicants have also provided a revised surface water drainage strategy which Hampshire County Council as the Lead Local Flood Authority (LLFA) has agreed subject to a suitable detailed surface water drainage scheme condition. The submitted surface water drainage strategy sets out a combination of surface water drainage features including basins, swales and soakaways. The Drainage Strategy Addendum (27/3/2024) sets out a schedule of operational management and maintenance in line with the response from the LLFA (19/4/2024). A scheme of management and maintenance of the drainage network on site would be secured as part of the s106 legal agreement obligation securing operation of a management company for all of the open spaces and infrastructure on the site.

The Environment Agency (EA) has no objection to the proposal subject to conditions. A condition on no operational development in fluvial flood zones 2 and 3 is agreed. It is considered that there is no need for a specific condition on floor levels given the siting of the proposed new Phase 1 homes in flood zone 1 and the clear separation distances between them and the fluvial flood zones identified in the NFDC SFRA and this approach reflects the approach taken on other strategic site allocations in the District.

Given the agreement of both the LLFA and the EA to the proposal subject to suitable conditions it is considered that the comments Ringwood Town Council have set out in their representations on surface water drainage have been addressed.

ii. Foul Drainage

The Flood Risk Assessment and Drainage Strategy Report sets out a foul drainage strategy. All flows will be directed to the south-west corner of the site, and discharge off site, into the existing sewer in Hampshire Hatches Lane.

The Drainage Strategy Addendum (March 2024) sets out that recent correspondence from Wessex Water has led to an increase in the size of the foul sewer running along the spine road within the site from 150mm diameter to a 225mm diameter. This ensures there is adequate capacity in the network for a development of this size. Furthermore, at the request of Wessex Water, the foul connection point has been revised to an existing Wessex Water manhole which is a further 50m south-west along Hampshire Hatches Lane. An extension to the current topographic survey is required to confirm whether there is sufficient carriageway width to accommodate a new sewer or whether an upgrade to the existing sewer is required to facilitate connection. This can be secured through a suitable condition.

In terms of local network capacity Wessex Water provided comment in April 2023 on both the Local Plan Allocation Site SS14 Hightown Lane application (21/10042) specifically and the Local Plan Allocations Sites in Ringwood as a whole (SS13, SS14 and SS15). The Report taken to NFDC Planning Committee in March 2023 for application 21/10042 set out the following (emphasis added):

Wessex Water has stated that they are currently providing additional storm storage at Ringwood Water Recycling Centre (WRC), to reduce the frequency of storm spills to the environment arising from the existing network and a programme for future capacity improvements at the WRC is to be delivered early (2025-30), and to

accommodate the future housing growth. It is important to stress that the existing network can accommodate the proposed development, but Wessex Water have set out a programme to upgrade the capacity of the network in association with the future housing growth.

Wessex Water has confirmed that no such bypass is required to serve the proposed development and there does not need to be any foul drainage scheme or connection that needs to be delivered in conjunction with SS13. Wessex Water state that the situation has changed since the above text was added into policy. This was a result of detailed assessments of the existing network which conclude that the proposed development can connect into the existing network and there is no requirement to deliver a joined up foul drainage scheme or connection in conjunction with SS13 Land at Moortown Lane.

In response to the concerns in relation to capacity and raw sewage has flooded out at the Bickerley onto the public highway, Wessex Water has confirmed that there is existing treatment capacity at the works for the increase in flows expected from the proposed development, but it should be noted that the current proposals 2025-2030 will increase biological treatment capacity by 17% - this will provide capacity for known allocations. In addition, Wessex Water has stated that they are currently providing additional storm storage at Ringwood Water Recycling Centre (WRC), to reduce the frequency of storm spills to the environment arising from the existing network.

Wessex Water confirmed in an email to the Case Officer in February 2023 that flows from SS13 (and SS15) will impact on downstream pumping stations although not significantly and that this can be mitigated by on site measures to be agreed between Wessex Water and the developers.

As such, subject to suitable conditions, the proposal accords with Local Plan Policy SS13 criterion (iv)(b).

iii. Summary

As such, the proposal, subject to suitable conditions, satisfactorily addresses fluvial flooding, surface water flooding and foul drainage needs and therefore accords with Local Plan Policies CCC1 criterion (iv)(b) and SS13 criteria (iii)(d), (iv)(a) and (iv)(b) and NPPF (December 2023) paragraphs 168, 173 and 175.

10.5 Ecology

Local Plan Policy ENV1 (Mitigating the impacts of development on International Nature Conservation Sites) sets out that development will only be permitted where the Council is satisfied that any necessary mitigation, management or monitoring measures are secured in perpetuity as part of the proposal and will be implemented in a timely manner, such that, in combination with other plans and development proposals, there will not be adverse effects on the integrity of International Nature Conservation Sites (INCS). For residential development adverse effects should be adequately mitigated by implementing measures relevant to the site location including as set out in the Mitigation for Recreational Impacts SPD, Solent Recreation Mitigation Strategy and nutrient management guidance.

Local Plan Policy DM2 (Nature Conservation, Biodiversity and Geodiversity) sets out how development proposals should address international, national and local designed sites. Development proposals should encourage biodiversity and not adversely affect protected flora and fauna.

The Ringwood Neighbourhood Plan Policy R9 (Creating a Green Infrastructure and Nature Recovery Network) sets out:

- A. The Neighbourhood Plan designates a Green Infrastructure and Nature Recovery Network, as shown on the Nature Recovery Policy Map, for the purpose of promoting ecological connectivity, outdoor recreation and sustainable movement through the parish and into the National Park; helping to mitigate climate change. The Network comprises the town's variety of green spaces, ancient woodland, trees and hedgerows, water bodies, assets of biodiversity value, children's play areas and recreational playing fields.
- B. Development proposals that lie within or adjoining the Network are required to have full regard to creating, maintaining and improving the Network in the design of their layouts, landscaping schemes and public open space and play provisions. Elsewhere, all proposals should protect and maintain trees and hedgerows; provide for the planting of new trees for flood management and carbon sequestration purposes; and include hedgerows and bulb and wildflower planting where it is compatible with the street scene. The wildlife corridors should also be maintained as dark corridors as far as possible to increase their value for nocturnal species.
- C. The Policies Map shows those parts of the designated Network that are known or likely to have biodiversity value either as habitat areas; as hedgerows or lines of trees; or as streams and rivers. For the purpose of calculating Biodiversity Net Gain requirements development proposals located within or adjoining that part of the Network should anticipate achieving at least a medium distinctiveness multiplier score.

The applicants have provided a significant number of ecological reports. The original Environmental Statement (Campbell Reith, December 2021) has been subsequently added to with further addendums and assessments which are highlighted below where relevant.

i. Habitat Mitigation and impact on European designated nature conservation sites

The applicants have submitted a Shadow Habitat Regulations Assessment (SHRA) (EDP, March 2024). In accordance with the Conservation of Habitats and Species Regulations 2017 ('the Habitat Regulations') the SHRA includes an Appropriate Assessment ('AA').

The AA has been carried out as to whether granting permission would adversely affect the integrity of the New Forest and Solent European Sites. The results from the Stage 1 Screening Assessment found that the following comprised likely significant effects (LSE):

- Air Quality Effects (Construction, Operation)
- Noise Disturbance Effects
- Recreational Disturbance Effects
- Water Quality Effects (Increased Phosphate load)

These potential pathways were therefore taken forward to Stage 2 AA. The results from the Stage 2 appropriate assessment found that with the application of mitigation, there would be no adverse effect on the integrity of any Habitat Site (HS). The mitigation comprises:

- Air and noise pollution from traffic emissions during construction and occupation: Financial contribution in line with Policy ENV1, Travel Plan measures, Construction Environmental Management Plan (CEMP) and electric car charging infrastructure.
- Recreational disturbance effects during occupation: ANRG provision and financial contribution.
- Water Quality Effects: purchasing phosphate mitigation credits (Bickton Fish Farm).

The necessary mitigation will be secured through a combination of a planning obligation and suitable conditions.

To deflect recreational trips to protected areas and in accordance with Local Plan policy the applicants have put forward 9.55 ha of Alternative Natural Recreational Greenspace (ANRG) located within the application site. This meets the minimum necessary ANRG size requirement taking into account the agreed housing mix (and hence occupation levels) for phases 1 and 2. Further commentary on the proposed ANRG is set out later in the Planning Assessment (Public Open Space and Landscape).

Local Plan Policy ENV1 (Mitigating the impacts of development on International Nature Conservation sites) requires that all development involving additional dwellings makes a contribution towards New Forest Access Management and Visitor Management Costs (the New Forest People and Wildlife Ranger service). This will be secured through a planning obligation. Additionally, within the Access Management and Visitor Management costs there is an element which requires that all additional dwellings make a contribution towards monitoring the recreational impacts of development on the New Forest European sites.

The NFDC Ecologist confirmed in the updated response dated 27 March 2024 that all relevant designated sites requiring consideration have been identified and that through the screening process summarised above that the pertinent issues which could affect the Natura 2000 sites have been identified. It is concluded that the development proposals would not have the potential to impact on the integrity of European Sites given the measures and mitigation proposed.

Based on the assessments presented in this report, the Planning Authority as 'competent authority', is considered not to require further assessment under the Habitats Regulations, and subject to mitigation the proposed development can proceed without Stage 3 and Stage 4 being completed.

NFDC will be adopting the shadow Habitats Regulation Assessment (HRA) submitted which includes an Appropriate Assessment (AA).

ii. Phosphates Mitigation

The applicants have submitted a revised Phosphorus Balancing Assessment Report (Tetra Tech, May 2024) in addition to the Shadow Habitat Regulations Assessment (SHRA).

The SHRA acknowledges (paragraph 6.9) that in the absence of a strategic solution implemented across the local planning authority or County, a bespoke offsite mitigation solution is required to offset the increased discharge of phosphates into the River Avon SAC resulting from the Proposed Development (calculated as 67.45kg per year). The SHRA (Paragraph 6.10) goes on to state that the applicant intends to implement a mitigation strategy and that this will be via the former Bickton Fish Farm by means of purchasing phosphate mitigation credits.

The NFDC Ecologist and Natural England consider that Bickton is an acceptable phosphate mitigation scheme for this site. The NFDC Ecologist states that this is an acceptable strategy given such measures are capable of avoiding or mitigating significant effects upon the River Avon SAC. Therefore, a suitable Grampian condition to secure suitable mitigation can be imposed on the proposal.

iii. Biodiversity Net Gain and Ecological Reports

The applicants have submitted an updated Biodiversity Net Gain Assessment (EDP, March 2023) and supporting Biodiversity Metric, and a Phase 1 Landscape and Ecology Management Plan (LEMP) (EDP, February 2024).

The NFDC Ecologist has concluded that the approach to the BNG assessment is acceptable and notes that additionality has been transparently addressed which is welcomed. The assessment demonstrates that the proposed development would result in a policy compliant net gain of biodiversity of more than 10% for area-based habitat and linear units.

The NFDC Ecologist has also recommended that the BNG metric for the Outline part of the proposal (Phase 2) is re-run and secured through a suitable condition as part of any future Reserved Matters approval. The NFDC Ecologist also notes that the BNG assessment states that full details of the management of the habitats within the Site will be provided within a Landscape and Ecology Management Plan (LEMP) secured by suitably worded planning condition. A LEMP covering Phase 1 has been submitted and will be conditioned accordingly. The need for subsequent revisions to the LEMP required for the Outline phase will also be secured given the importance to the long-term provision of BNG.

The NFDC Ecologist also recommends securing suitable monitoring in line with the Phase 1 LEMP and an Ecological Construction Method Statement (ECMS) should be secured by condition. The NFDC Ecologist has also confirmed that the ecological baseline has been adequately captured in the submitted ecological reports and recommends a suitable condition to secure suitable updated reports in conjunction with later phases of development. In line with the comments from NFDC Ecology the long-term management and monitoring of BNG will be secured through conditions and a suitable clauses in a s106 agreement.

iv. Protected Species

The Environmental Statement (December 2021) Chapter 8 sets out that the protection of species during construction will be delivered through the ECMS. The NFDC Ecologist has agreed the proposed measures set out in relation to birds, bats, badgers and hedgehogs. These measures and monitoring can be secured through suitable conditions.

The NFDC Ecologist has noted that the LEMP states with reference to birds:

With reference to NFDC expectations and within the Environmental Statement which requires one bird box per dwelling, a total of 150 swift boxes (finish to match that of the building if integrated) will be installed. Boxes will be mounted following manufacturer's specifications, out of direct sunlight on aspects of the building that provide some cover from surrounding vegetation to offer shelter to birds but with a clear flight line to/from the entrance (uncluttered). Boxes should be positioned between 2m and 5m from the ground to deter predators.

A Phase 1 Landscape Features Plan (EDP, January 2024) illustrates this mitigation

which can be secured through a suitable condition tied to occupation.

The NFDC Ecologist also notes that the Environmental Statement (December 2021) Chapter 8 identifies the requirement for a sensitive lighting strategy given the presence of light sensitive bat species on the Allocation Site and suggests a suitable condition to secure this. The Phase 1 Landscape Features Plan also identifies the location of bat roosting enhancements in line with the revised LEMP. A suitable condition will also secure similar bird and bat mitigation features for the Outline Phase 2.

The NFDC Ecologist also recommends a pre-construction badger survey for Phase 1 given the location of existing setts in the proposed ANRG.

The applicants have submitted an updated Reptile Mitigation Strategy (EDP, March 2024). The NFDC Ecologist is in broad agreement with the proposed mitigation which can be secured through a suitable condition.

v. Ringwood Town Council Neighbourhood Development Plan

The Ringwood Neighbourhood Development Plan Nature Recovery Policy Map sets out two areas comprising a 'nature recovery corridor'. Both of these are located south of the application site and mostly located within the New Forest National Park and as such are not adjoining the application site.

The Ringwood Neighbourhood Development Plan Nature Recovery Policy Map also identifies the existing sports pitches and facilities south of Moortown Lane – which includes the existing open space within the application site – as amenity green spaces (Built Up Area). As set out, no development beyond a new pedestrian route parallel to Moortown Lane is proposed in this area within the application site.

vi. Ecology Summary

In line with the above, subject to necessary mitigation secured through suitable conditions and a planning obligation, the proposal has addressed the material ecological considerations of Habitat Mitigation and European designated nature conservation sites, phosphates neutrality, biodiversity net gain and protected species.

Based on the assessments presented in this report, the Planning Authority as competent authority is considered not to require further assessment under the Habitats Regulations, and subject to mitigation the proposed development can proceed without Stage 3 and Stage 4 being completed. NFDC will be adopting the shadow Habitats Regulation Assessment (HRA) submitted which includes an Appropriate Assessment (AA).

Therefore, subject to a planning obligation and suitable conditions, the proposal accords with Local Plan Policies ENV1 and DM2 and RNP Policy R9.

10.6 Public Open Space and Landscape

Local Plan Policy ENV1 (Mitigating the impacts of development on International Nature Conservation sites) sets out that for residential development, inter alia, adverse effects can be adequately mitigated by implementing approved measures relevant to the site location, including as set out in the Mitigation for Recreational Impacts SPD. Policy criterion 4(ii) sets out that for developments of 50 or more net additional residential dwellings direct provision by the developer of at least eight hectares of natural recreational greenspace per 1,000 population located on the

development site or directly adjoining and well connected to it is required in addition to management and monitoring contributions.

Local Plan Policy ENV4 (Landscape character and quality) sets out that where development is proposed there is a requirement to retain and/or enhance the following landscape features and characteristics through sensitive design, mitigation and enhancement measures, to successfully integrate new development into the local landscape context:

- i. Features that contribute to a green infrastructure and distinctive character within settlements including the locally distinctive pattern and species composition of natural and historic features such as trees, hedgerows, woodlands, meadows, field boundaries, coastal margins, water courses and water bodies;
- ii. Features that screen existing development that would otherwise have an unacceptable visual impact;
- iii. Existing or potential wildlife corridors, footpath connections and other green links that do, or could, connect the site to form part of an integrated green infrastructure network;
- iv. The landscape setting of the settlement and the transition between the settlement fringe and open countryside or coast;
- v. Important or locally distinctive views, topographical features and skylines; and
- vi. Areas of tranquillity and areas of intrinsically dark skies.

Local Plan Policy CS7 (Open spaces, sport and recreation) sets out that the aim is to provide as a minimum standard the equivalent of 3.5 hectares of public open space per 1000 population to serve the district's towns and larger villages. The improvement of play, sports and other public open spaces provision will be implemented in various ways.

Local Plan Policy STR2 (Protection of the countryside, Cranborne Chase Area of Outstanding Natural Beauty and the adjoining New Forest National Park) sets out that development should not have an unacceptable impact on the special qualities and purposes of the adjoining New Forest National Park and its settings. In the determination and implementation of development proposals including planned growth, great weight will be given to ensuring that the character, quality and scenic beauty of adjoining New Forest National Park are protected and enhanced.

The Mitigation for Recreational Impacts on New Forest European Sites Supplementary Planning Document (SPD) (May 2021) gives detailed guidance on the implementation of Policy ENV1: Mitigating the impact of development on International Nature Conservation sites with regard to recreational impacts.

The Ringwood Neighbourhood Development Plan Policy R7 (The Ringwood Design Code) sets out:

As appropriate to their scale, nature and location, residential development proposals must demonstrate high quality design and legible layouts which, where relevant, have taken account of the positive aspects of local character defined in the Ringwood Design Code (Appendix B), and should also:

- i. Minimise the impact of development on higher ground by careful siting and by comprehensive landscaping;
- ii. Include on a Landscape Plan the opportunities to create wildlife corridors and deliver biodiversity net gain;
- iii. Include amenity space having sufficient size, shape and access to sunlight for the

- provision of recreational benefits to the occupants;
- iv. Offer highly permeable residential layouts for cyclists and pedestrians moving within and through the development;
 - v. Front boundary treatments should be in keeping with the historic and rural character of Ringwood (DC.03.02 and DC.05.2). Hard boundary treatments up to 1m high will be permitted, where taller boundaries are deemed appropriate (for example, for clear reasons of security or privacy) this should be achieved by planting unless otherwise justified by historic character. Hard boundaries should be permeable to wildlife; and
 - vi. Be respectful of the tranquil setting of the National Park and protective of its dark skies. Lighting should be fully justified and well designed to shine only where it is needed.

i. Landscape and Informal Open Space

The application is supported by a Landscape and Visual Impact Assessment (LVIA) (Environmental Statement, Volume 1, Campbell Reith, December 2021). NFDC Environmental Design set out in their consultation response of March 2022 that a comprehensive LVIA was submitted as part of the EIA statement, that the study uses the appropriate guidance to formulate a methodology and has identified appropriate baseline assessments.

The LVIA sets out in paragraph 9.174 that there would only be very limited (and not significant) effects upon the setting of the New Forest National Park arising from the development, primarily due to the flat topography and considerable tree cover (between the application site and the boundary of the NFNP), which limits the potential for intervisibility. NFDC Landscape has made no objection to this conclusion and as such it is considered that the proposed development would not have an unacceptable impact on the special qualities and purposes of the New Forest National Park and its setting in line with Local Plan Policy STR2.

The application site wide landscape strategy is set out in the Landscape Masterplan and Alternative Natural Recreational Greenspace Strategy (12 April 2024) (Ref: edp 5444_d054p). This overarching landscape strategy covers all the application site – for both Phase 1 and Phase 2 – for both public open space and housing. Essentially, this landscape strategy is a suitable basis for consideration of detailed landscaping matters and can be secured through a suitable condition.

NFDC Landscape set out in their final comment (May 2024) that progress on the landscaping has been made which suggests a commitment to delivering a good landscape structure outside of the developed part of the site. Some minor issues remain but mostly such elements can be considered through planning conditions (as set out).

The Green Infrastructure Strategy (p. 20) sets out that the proposal will include informal open spaces, create interest and functional spaces that contribute to the overall defining characteristics of the landscape. There are two areas of informal public open space in Phase 1:

- **Moortown Lane Corridor:** A narrow corridor adjacent to Moortown Lane that aims to retain the rural character of the lane, whilst also providing connectivity between Christchurch Road and the main public open space.
- **Primary Street Pocket Park:** a landscaped greenspace located along the main primary street that create opportunities for large tree planting within the built-up areas.

The Moortown Lane Corridor has a notable role in delivering a suitable landscape transition between development within the allocation site and the open countryside to the south. The Primary Street Pocket Park should have a more formal landscape character given it will be framed by the tallest proposed dwellings within the housing development.

The informal open space provision with Phase 1 falls slightly short of the Policy size requirement (by 0.18ha) and the applicants acknowledge this in the Green Infrastructure Strategy. Essentially, it is considered acceptable for the slight shortfall in overall provision subject to the two spaces outlined above being a suitable quality in terms of hard surfaces and planting which will be finalised through suitable conditions and the overall provision of open space within the application site including the ANRG.

As such, it is considered that the detailed landscaping for both the public open space and the Phase 1 housing parcel can be secured through suitable conditions. These conditions will build on the Phase 1 Detailed Landscape Design sheets provided for both public open space and residential areas. For reference, the landscaping for Phase 2 will have to accord with the Landscape Masterplan, Green Infrastructure Strategy and Alternative Natural Recreational Greenspace Strategy will be determined through a subsequent Reserved Matters application. For reference, additional informal space is also proposed in the parallel application 23/10707.

i. Arboriculture

The application is supported by an Arboricultural Impact Assessment, Environmental Statement (Appendix 8.4, December 2021) and a January 2024 Addendum. The revised Phase 1 Landscape Detailed Design plans (EDP, 11 April 2024) sets out proposed planting schedules, tree pit details and wildflower meadow management.

The NFDC Tree Officer has raised no objection subject to suitable conditions. NFDC Landscape has also set out commentary on the proposed tree planting strategy in their final set of comments. As set out above, the final tree strategy in terms of species and siting for Phase 1 will be secured through suitable landscape and arboricultural conditions.

ii. Play Spaces and Formal Open Space

Phase 1 includes both a dedicated LEAP (Neighbourhood Equipped Area for Play). Broadly, a LEAP provides play space for younger children who are beginning to go outside the home and play under supervision.

The submitted Green Infrastructure Strategy (EDP, January 2024) sets out that:

The NEAP offers an opportunity for children of all ages and will act as a destination play space. The design includes a mixture of equipment designed to offer a range of activities throughout different zones. The NEAP has been designed in accordance with relevant guidance, including guidance from the Make Space for Girls campaign that aims to create safer and more appealing play spaces for girls.

The Phase 1 LEAP has been designed as a play space that offers a mixture of equipment targeted for younger children. Located within the ANRG but close to the housing and key routes, the LEAP will serve as destination play for residents in the southern part of the development. The playground has an organic design with soft boundary treatments and associated meadow areas which seeks to reflect the natural character of the surrounding ANRG.

The NEAP is sited in the northern half of the Phase 1 public open space. The

proposed equipment includes basketball goal, four swings, outdoor fitness (sit ups, ladder walk, parallel bars), balance beam, double width slide, jumping blocks, infinity bowl, trunk pile and large multi-play unit. The LEAP is sited in the southern half of the Phase 1 public open space. The proposed equipment includes 13 pieces of equipment including swings, seesaw, two houses, stilts, xylophone, block bridge and monkey bars and nativity seating.

Each piece of play equipment will have metal fixtures to avoid wooden features entering the ground and thus avoiding premature rotting. Both the LEAP and NEAP will have suitable play surfaces. Supplementary equipment and features for both the LEAP and NEAP include litter bins, gate access, hedgerows combined with post and rail fencing, picnic benches, play logs and boulders and a play space information board. The play areas will both be dog free zones.

The proposed NEAP and LEAP play spaces are supported by the NFDC Play Space Officer and Landscape Officer and can be secured through a suitable condition. A further substantial play space for younger children is proposed in the Green Infrastructure Strategy to be provided within the Phase 2 housing development. The long-term management of these spaces is set out below (sub-section (v) Management and Monitoring).

Policy CS7 requires provision of additional formal open space. It has been agreed with the applicant that a contribution of £110,000 towards the facilitation of a new full-size football pitch at Ringwood Town Football Club to the south of Moortown Lane, which is within the Local Plan Allocation Site SS13, would satisfy this policy requirement.

iii. Alternative Natural Recreational Greenspace

The application is supported by a Landscape Parameter Plan (Pegasus, 11/4/2024, Ref: P21-1078-DE_004-112 Rev. D) and an Alternative Natural Recreational Greenspace (ANRG) Strategy Plan (EDP, 22/1/2024, Ref: EDP 5444_d114a). Further detailed on the proposed on-site ANRG is set out in a Green Infrastructure Strategy (EDP, January 2024) which sets out that all aspects of the ANRG have been designed in accordance with the Mitigation for Recreational Impacts SPD.

The ANRG Strategy Plan sets out that the on-site ANRG provision will comprise:

- Phase 1: 4.37 ha
- Phase 2: 5.18 ha

As such, the total on-site ANRG provision is 9.55 ha. Given the site wide housing mix (as set out) the total minimum ANRG requirement is 9.53 ha and therefore the on-site provision provides an adequate quantum of ANRG.

The Phase 1 ANRG is located immediately to the east of the Phase 1 housing and is sited in the approximate centre of the Allocation Site. The Phase 2 ANRG connects to the Phase 1 ANRG at its north-west corner and more substantially to the east where it will wrap around the proposed enclave of additional Phase 2 housing. The ANRG Strategy Plan sets out the internal dimensions of the ANRG in terms of main spaces (diameter of 120m or more) and secondary spaces (diameter of 60m or more). The proposed ANRG would provide two main spaces and nine secondary spaces across both ANRG phases and as such would meet the dimensional criteria of the SPD (Appendix 4).

The ANRG is both well connected to and in proximity to the proposed housing. The

ANRG is generally open and level and has surveillance from housing around the perimeter of Phase 1 which takes into account comments from the Hampshire Constabulary design adviser. A similar approach will be sought for the Phase 2 open spaces in any future Reserved Matter application.

The ANRG will provide a network of footpaths and an off-road cycle route that provides a natural corridor between Crow Arch Lane to the north through the site to Moortown Lane where new crossing points provide access to the sports pitches. The Phase 2 ANRG will include an improved public right of way which through a minor diversion will provide access to a new crossing over Moortown Lane. The Phase 1 Detailed Landscape Design plan (EDP, 11 April 2024) sets out the hard surface materials for the footpaths and these can be secured through a suitable condition.

The Green Infrastructure Strategy (p. 28) sets out that a comprehensive wayfinding strategy will be incorporated within all areas of public open space. It also sets out that the majority of the ANRG will be dog-friendly zones where dogs can play off the lead. It also states that to ensure the boundary treatment is in-keeping with the character of the ANRG, a hedgerow containing a deer fence will run along the perimeter. This can also be secured through a suitable condition.

The Green Infrastructure Strategy (p. 29) sets out a summary of all street furniture in the ANRG (*combined litter & dog waste bins, benches, picnic benches, interpretation and information signs, and way-marker posts*). These are set out in the Phase 1 Detailed Landscape Design plan (EDP, 11 April 2024) and the final specifications can be secured through a suitable condition.

The ANRG would be crossed by a road link which would provide vehicular access between Phase 1, the proposed housing enclave in Phase 2 and connect through to the residual land in the north-east of the Allocation Site. For reference, the Local Plan Concept Masterplan for SS13 (p. 154) sets out that the indicative primary access would have to bisect the proposed ANRG (as set out), and thus have a degree of severance, to satisfy Policy criterion (iii)(b).

The applicants have provided a revised ANRG Crossing Plan and Perspective (EDP, 15/3/2024) which sets out a bespoke vehicular and pedestrian crossing which addresses the severance criteria (page 47) in the Mitigation SPD. This includes speed limits, easy access for pedestrians and cyclists and a bespoke design including visually appropriate hard surfaces. The revised design has been agreed with NFDC Environmental Design and as such it is considered that the proposed design would accord with the detailed guidance Mitigation SPD and the site allocation concept masterplan.

The ANRG will include infiltration basins as part of the site wide surface water drainage strategy. The Mitigation SPD (Paragraph A4.5.13) sets out that recreational mitigation land offers an opportunity for integral drainage design that fulfils the policy requirements for managing surface water from new residential developments in the form of above ground features such as ditches, swales, water storage areas and ponds. As such, the inclusion of above ground features is acceptable in principle.

A Phasing Plan for the proposed Phase 1 ANRG will be secured through the s106 planning obligation in line with Natural England advice.

As such, the proposed ANRG is an attractive open space and appropriately scaled and thus would be effective in diverting potential visits away from the New Forest designated European sites.

iv. Management and Maintenance of Public Open Spaces

The proposed public open space including the ANRG, informal open space, drainage features and play areas, in both Phase 1 and Phase 2, are to be managed by the applicant. As such, it will be necessary to secure through a planning obligation the ongoing management and maintenance regime for these areas in line with the advice from Natural England, the NFDC Ecologist and other relevant consultees. The Council will also seek to ensure that provision is made for the scenario whereby management is not undertaken properly or the management company ceases to operate in the event that ongoing future management of the public open spaces is not of a satisfactory standard.

The proposed residential development is located entirely within a Local Plan Strategic Site which was subject to detailed scrutiny in terms of the impact on the local landscape at the Examination stage. In line with the Landscape Parameter Plan, Green Infrastructure Strategy and Alternative Natural Recreational Greenspace (ANRG) Strategy Plan the proposal, subject to conditions securing detailed design including final tree planting, includes comprehensive landscaping for the Phase 1 public open space and housing areas. The site will provide a suitable permeable layout providing a north-south off-road cycle/pedestrian route. The Landscape Masterplan and Alternative Natural Greenspace Strategy plan sets out areas in the Phase 1 public open space for biodiversity. As such, the proposal accords with RNP Policy R7 criterion (i) to (iv).

v. Summary

The proposal sets out a suitable framework for the public open space within the application site. The detailed design for the landscaping, including a suitable tree strategy, in Phase 1 public open space and housing development area can be secured through suitable conditions. The slight shortfall in informal open space provision is noted but on balance of considerations can be addressed through suitable high-quality landscaping. The proposed LEAP and NEAP play spaces are both of a high-quality design. Formal open space provision will be satisfied through a planning obligation. The ANRG provision across both Phase 1 and Phase 2 provides an attractive open space, suitable links and vehicular crossing, and is appropriately sized and thus would be effective in diverting potential visits away from the New Forest designated European sites.

For reference, the allotments identified in Policy SS13 criterion (i) third bullet point have been delivered outside the context of this proposal.

Therefore, subject to a s106 planning obligation and suitable conditions, the proposal accords with Local Plan Policies ENV1, ENV3 criterion (vi), ENV4, CS7 and SS13 criterion (iii) (a)(d) and (e), RNP Policy R7 (i) to (iv) and (vi) and the guidance set out in the Mitigation for Recreational Impacts on New Forest European Sites Supplementary Planning Document (SPD) (May 2021).

10.7 Design – Density, Scale and Phase 1 Detailed Design

Local Plan Policy ENV3 (Design quality and local distinctiveness) sets out that development should contribute positively to local distinctiveness, quality of life and enhance the character and identity of the locality by creating buildings, streets, places and spaces that are functional, appropriate and attractive. New development will be required to meet supporting design criteria (as set out).

Further NFDC design guidance is set out in the Ringwood Local Distinctiveness SPD

(July 2013) and Housing Design Density and Character SPD (April 2006).

The NPPF (Section 12, paragraphs 131 to 141) sets out national planning policy guidance on design. Further national design guidance is set out in the Planning Practice Guidance website.

The Ringwood Neighbourhood Plan Policy R7 (The Ringwood Design Code) sets out that must demonstrate high quality design and legible layouts which where relevant have taken account of the positive aspects of local character defined in the Ringwood Design Code and should also address supporting criteria as set out.

The Ringwood Neighbourhood Plan Policy R8 (Building for a Healthy Life) sets out all development with a residential component of 10 or more dwellings should apply the Building for a Healthy Life (BHL) design assessment tool (or equivalent methodology) to inform the design proposals, based on a traffic light system of scoring seeking to achieve a majority of green scores. Building for a Healthy Life Assessment should be included within the Design and Access Statement and submitted with the application.

As set out, the application is supported by a revised Design and Access Statement (May 2024) which summarises the proposed design approach.

i. Built Density

The NPPF sets out guidance on achieving appropriate densities in paragraphs 128 to 129. Paragraph 128 sets out that planning decisions should support development that makes efficient use of land taking into account material considerations (as set out). This includes (criterion a) '*the identified need for different types of housing and the availability of land for accommodating it*' as well as viability, infrastructure and design considerations. NPPF Paragraph 129 sets out that where there is an existing or anticipated shortage of land for meeting identified housing needs it is especially important that planning decisions avoid homes being built at low densities and that developments make optimal use of the potential of each site.

The residual land within the Allocation Site to the north-east of the application site has approximately 3.2 hectares of the land within EA fluvial flood zone 1 (the zone at the lowest risk of flooding). However, much of the remaining land to the east is within EA fluvial flood zones 2 and 3 and includes land currently identified within the functional floodplain (Zone 3b). As such, if the housing land parcels in these areas, as set out in the indicative Local Plan Concept Masterplan for SS13 were to come forward they would need to satisfy the NPPF sequential and exception site tests.

Therefore, taking into account the need for the residual area to provide their own ANRG (to potentially link with this proposal) and other open space and access requirements it is considered that the residual land could provide circa 80 additional dwellings and hence the Allocation Site could deliver circa 525 dwellings. This is only 45 dwellings above the minimum quantum set out in Local Plan SS13 and is not considered to be excessive.

The current proposal includes both a significant number of affordable homes and smaller homes overall, which as set out makes a proportionate contribution towards the identified need for different types of housing. Given that the indicative need in Local Plan Figure 6.1 is clearly orientated towards the provision of smaller homes then delivery of these homes is likely, as proposed here, to be manifested in built densities higher than that in some, but not all, in the more established suburbs of Ringwood.

The DAS confirms that the built density within Phase 1 of the proposed development ranges between 25 dwellings per hectare (dph) to 45 dph with an average of 38 dwellings per hectare (dph). This is broadly akin to the built density approved at the Linden Homes scheme to the north of Crow Arch Lane where supporting information set out that majority of that site had a residential built density which ranged between 30 and 45 dph. As such, the proposed built density is not considered to be at odds with existing local built densities.

Essentially, the proposal has made efficient use of land and set out an optimal layout when balanced against other design considerations and housing land supply in line with NPPF 128 and 129.

As such, the Building Density Parameter Plan (Pegasus, 19/1/2024, Ref: P21-1078-DE-004-0109 Rev. A) is an acceptable basis for detailed design across the Full (Phase 1) and Outline (Phase 2) elements of the hybrid application.

ii. Scale

The Building Scale Parameter Plan (Pegasus, January 2024) sets out that the majority of the application site development parcels will be for residential buildings (houses and flatted blocks) of either 2 or 2.5 storeys. A small central core of the larger development parcel (which is split between the Full and Outline elements of the application) is identified for residential buildings of up to 3 storeys. Phase 1 includes two 3 storey townhouses.

NFDC Environmental Design has objected to the building scale on the basis that the appropriateness within the landscape or along the countryside edge of the proposed storey heights has not been explained or justified. The DAS sets out a review of the characteristics of the form and fabric of buildings and spaces in Ringwood's historic core, neighbouring areas to the west and east and recent developments to the north and west. For reference, the DAS does not identify the extent of single-storey dwellings southwards along Christchurch Road despite the supporting plan on page 42 confirming this area is part of the analysis.

However, notwithstanding this criticism, it is considered that sufficient justification has been provided for a scheme predominantly for 2 or 2.5 storeys residential buildings which broadly reflects existing residential dwellings in Ringwood and development recently permitted on other Local Plan Strategic Sites in the District. The Case Officer has requested to the applicants that some 1.5 storey dwellings be provided within the Outline Phase and this point will be raised again in any subsequent Reserved Matters application.

The proposed two 3 storeys houses are sited at the centre of the proposed housing area and it is considered would not have a significant harmful impact of the wider landscape by virtue of their height and massing. The proposed elevations of these two houses have been amended with a simplified brick vernacular which is considered a suitable appearance.

As such, the Building Scale Parameter Plan (Pegasus, 19/1/2024, Ref: P21-1078-DE-004-0110 Rev. A) is an acceptable basis for detailed design across the Full (Phase 1) and Outline (Phase 2) elements of the hybrid application.

iii. Phase 1 Housing Detailed Design

Character Areas

The DAS (p. 38-45) sets out a simple analysis of local character identifying the historic core of Ringwood, older neighbouring areas (on Christchurch Road and Crow Lane) and more recent developments including the Linden Homes scheme to the north. A materials palette for each area is identified. The DAS (p. 76) sets out three proposed character areas for Phase 1 including one for development on the periphery of the housing parcel overlooking public open space to the south and east ('Crow Gardens'), one along the main spine road ('Crow Boulevard') and one for the interior of the housing parcel ('Moortown Suburbs'). The DAS (p. 96, 98) sets out a Phase 1 Character Area plan and provides a more detailed rationale for each of the character areas. The DAS (p.108) has set out a simple materials palette for each of the character areas in Phase 1 which includes red and dark bricks, render and mixed roof forms.

However, the NFDC local distinctiveness SPD section on the Southern Approach Character Area (the west immediately to the west of the application site) does not set out specific guidance on plot width, building lines, massing and density amongst other things. The SPD sets out (p. 103) with regard to materials that with such a myriad of styles and ages of development in Ringwood it is important to restrict the palette to locally appropriate materials.

Essentially, it is considered that there are no identified definitive local design characteristics which should clearly direct the character of housing parcels within the application site. The local context is mixed and includes a wide range of housing typologies as well as commercial and recently constructed housing estates to the north. In this instance, the proposal has a mix of housing typologies including smaller terraced housing and cottages historically typical of the town.

As such it is considered that the three proposed character areas are appropriately mixed and modest in their scope, appearance and form and utilised sufficient design cues in terms of their form and materials.

Street Design

The DAS (p.86) sets out the proposed Phase 1 street hierarchy:

Phase 1 of the proposals incorporates a stretch of the principal route, stretching northward from the access point off Moortown Lane, and an additional arm extending to the east. The two secondary routes within Phase 1 extends from the principal street, leading to the shared surface routes, which then feed to the private drives. The private drives within Phase 1 are arranged predominantly along the edges of the built-up area, at the interface with the adjacent proposed public open space.

It is considered logical to incorporate the principal route in Phase 1 given both the need to serve the Outline Phase 2 area and to enable connections to the residual land parcels in the wider Site Allocation. The remaining roads with Phase 1 are a combination of traditional streets, shared surfaces and private drives. Essentially, it is considered that, contrary to the view of NFDC Environmental Design, there is a clear street hierarchy in Phase 1 in line with the guidance set out in the national planning guidance document Manual for Streets.

The DAS (p.110) sets out a Phase 1 landscaping strategy and the Phase 1 Landscape Detailed Design – Residential Plots (Sheets 1 to 5) (11/4/2024) (EDP; Ref: 5444-d091f) sets out a detailed planting scheme for the residential area. Phase

1 – with specific regard to new urban street tree planting – will include a modest palette of trees.

NFDC Environmental Design set out that none of the streets are what could be considered tree-lined in accordance with the NPPF paragraph 136 (which sets out that planning decisions should ensure that new streets are tree-lined). Essentially, whilst none of the proposed streets could accurately be described as an avenue it is considered that the proposal does have an adequate amount of street trees in line with the broad aspiration in line with NPPF paragraph 136.

The submitted plans include Street Scenes (Moortown Lane) (Pegasus, 7/9/2023, Ref: P21-1078-SS) for Phase 1. This sets out that streets within the scheme will not be overly dominated by one or two specific residential typologies and that each dwelling has some defensible space between the dwelling elevation and highway.

NFDC Environmental Design set out that the intensity of development along every street is unrelentingly mediocre with little space in front of buildings to allow for the various uses that the street envelope should cater for and that there is not enough opportunity for personalisation, greenery and tree planting.

Whilst the comments of the Environmental Design team are noted, the local area has a mixed character in terms of the set back of buildings (as summarised in the Southern Approach section of the Ringwood Local Distinctiveness SPD) that references both historic residential buildings with either no front defensible space (186-240 Christchurch Road) or more recent housing schemes with similarly sized front gardens (Shires Close and the Linden Homes scheme).. Given the above analysis of the surrounding area the extent of defensible spaces to the front of dwellings, with the context of streets, are on balance considered acceptable.

The DAS (p. 90) sets out the proposed Phase 1 boundary treatment strategy:

Development plots are defined by a range of boundary treatments including walls and fences, depending upon their location, in order to clearly define public and private spaces.

The Phase 1 Boundary Treatment Plan (Pegasus; 10/4/2024, Ref: P21-1078-DE-003-D103-Rev.B) sets out the location of the proposed walls and fences within Phase 1. The plan sets out that along the site frontage facing Moortown Lane (plots 17 and 47), the main spine road (plots 83, 84, 100, 111 and 150) and along the main secondary routes (plots 20, 26, 34 and 62), amongst others, visually prominent boundaries will be brick walls rather than timber fencing, This is a suitable design response which assists in defining the private and public realms. The detailed design of the proposed boundary treatments can be secured through a suitable condition.

Generally, the scheme sets out open plan front gardens with low-level hedges and shrubs. This is considered to be a suitable design response.

Housing Design

The DAS (p.108-109) summarises the architectural detailing and their distribution. The submitted plan Housetype Pack Drawings (Pegasus, Ref: P21-1078-DE-various) provides elevations and floorplans for each of the different dwellings in Phase 1. The architectural language is traditional with the majority of dwellings being brick with render, weather boarding and hanging tiles used less frequently. The roofscape is mixed with a suitable mix of gable, half-hipped and hipped roofs and this is one of the stronger elements of the proposed design. The proposal has a simple palette of red bricks which the NFDC local distinctiveness SPD again identifies as being a suitable

Ringwood material.

The Ringwood Design Guidance and Codes (AECOM, Second Draft Report, November 2022; Amended June 2023) sets out (p.58) that the predominant building material used in the town is red brick and that there is a range of architectural styles used within the town for walls, roofscape and fenestration. The proposal includes some, but not all, of the existing architectural features (hipped and gable roofs, pantiles, dormers, porches) in Ringwood that are photo-illustrated on page 59 of the RTC Ringwood Design Guidance and Codes document.

NFDC Environmental Design set out the view that the proposal is too homogenous with insufficient contrasts, highlights and no sympathy with local character. However, the proposal sets out a wide variety of housing typologies (flats, terraces, semi-detached and detached houses) which are already found in the south of Ringwood. For example, the smaller dwellings within the proposal (such as those in plots 9 to 12) are akin in their scale and plain facades to the 19C and early 20C red-brick cottages identified in the local area in the Ringwood Local Distinctiveness Supplementary Planning Document (July 2013). Essentially, the proposal is sufficiently sympathetic to local domestic architecture.

Notwithstanding this, it is considered that the comments NFDC Environmental Design make of the stopping of front façade materials and detailed design on the side elevations of many houses are a fair criticism. The proposal could have continued the materials and design on all elevations and there is some slight diminution of the scheme design quality as a result.

The proposed affordable housing is generally plainer than the market housing in terms of architectural detailing but not to the extent that it would be an incongruous presence in the wider streetscene.

As such, notwithstanding some criticism, it is considered that on balance, when considered in the round with all other material considerations (as is the case at the end of this report), the proposed residential dwellings are suitable for a new housing development on the edge of Ringwood and that the proposed residential dwellings are sufficiently well designed in terms of architectural detailing and context.

Gardens and Refuse Storage

Each of the proposed houses in Phase 1 has an accessible rear garden. Essentially, all the rear gardens are at least proportionate in size to the footprint of the host dwelling. Likewise, both the flatted blocks have access to rear semi-private spaces. NFDC Environmental Design have commented that 'garden groups' are often too confined for taller shrubs and trees but many of the gardens appear to have capacity for some planting including modestly-sized trees – if the future occupiers wished to do so. Moreover, there is no policy requirement for the applicants to plant rear garden trees prior to occupation and it is not reasonable to rely on private rear garden trees being secured by a condition.

The DAS (p.94) sets out the proposed Phase 1 refuse storage strategy:

Refuse storage will be convenient with access to rear gardens, with the requisite internal storage, whilst refuse collection is in line with regulations both for resident carry distances of 30m and within acceptable operative carry distances typically of 25m.

The two flatted blocks each have integrated bin storage rooms and an area of

hardstanding for collection adjacent to the highway. This is shown on the Phase 1 Masterplan (27/3/2024) (Pegasus; Ref: P21-1078-DE-003-0101-C). Each of the remaining 140 dwellings have a rear garden for bin storage and a hard surface pedestrian access. This is shown on the Phase 1 Detailed Hard Landscape Design (12/4/2024) (EDP; Ref: edp5444-d069d).

The applicants have submitted a revised Phase 1 Refuse Plan (10/4/2024) (Pegasus; Ref: P21-1078-DE-003-0102-B). This sets out the location of hard surface bin collection points (BCP) and the distance collectors and occupiers has to move bins to and from the BCP for the dwellings with private drives and those in courtyards. The NFDC Waste and Recycling Operations Manager has confirmed that the proposed refuse plan strategy is acceptable.

Design and Crime Prevention

The comments received from the Hampshire Constabulary Crime Prevention Design Advisor are noted. The public open spaces within the Phase 1 housing parcel each has suitable surveillance from nearby dwellings. It is considered that these spaces do not need to be enclosed by fencing. Rear garden gates will be fitted with a suitable lock secured through a planning condition. The originally proposed route connecting the Phase 2 public open space to Crow Lane between the bird of prey centre and the WI hall has been removed from the scheme and replaced with the proposed crossing on the Castleman Trail. The Advisor's comments were a factor in negotiating this change in this access siting.

iv. Ringwood Town Council – Building for A Healthy Assessment

Ringwood Town Council (RTC) in their representations of February 2024 and May 2024 set out that in line with NPPF paragraph 139 development that is not well designed should be refused. RTC note that the applicant has not submitted a Building for a Healthy Life Assessment, which is required by Policy R8 of the Ringwood Neighbourhood Plan. RTC has completed and submitted a Building for a Healthy Life Assessment which formed part of their February 2024 representation. RTC conclude that the development is not well designed and that on that basis the application should be refused.

NPPF paragraph 138 sets out::

Local planning authorities should ensure that they have access to, and make appropriate use of, tools and processes for assessing and improving the design of development. The primary means of doing so should be through the preparation and use of local design codes, in line with the National Model Design Code. For assessing proposals there is a range of tools including workshops to engage the local community, design advice and review arrangements, and assessment frameworks such as Building for a Healthy Life. These are of most benefit if used as early as possible in the evolution of schemes and are particularly important for significant projects such as large-scale housing and mixed use developments. In assessing applications, local planning authorities should have regard to the outcome from these processes, including any recommendations made by design review panels.

For the avoidance of doubt, there is no requirement on the part of the applicant to undertake a Building for a Healthy Life Assessment in the NFDC Local Plan and the NPPF. It is not on the list of required documents on the NFDC validation checklist. Indeed, the NPPF clearly sets out that it is only one possible assessment framework, amongst several, that could potentially be utilised. The requirement for a Building for a Healthy Life Assessment arises from the adopted Ringwood Neighbourhood Plan.

Notwithstanding this, given the extensive scope of the RTC Building for a Health Life appraisal – which extend beyond design considerations - the following commentary is set out in the Planning Committee report.

The Homes England 'Building for a Healthy Life: A Design Toolkit for neighbourhoods, streets, homes and public spaces (2020) sets out on page 3:

Organised across three headings, 12 considerations are presented to help those involved in new developments to think about the qualities of successful places and how these can be best applied to the individual characteristics of a site and its wider context.

The RTC Building for a Healthy Life Assessment sets out an appraisal utilising the 'traffic light' considerations in the Design Toolkit and concludes that 9 of the 12 considerations are deemed to be 'amber' (where an element of design is considered to fall between a green and red traffic light) and that 3 of the 12 considerations are deemed to be 'red' which suggests that one or more aspects of a scheme need to be reconsidered. Within each of the 12 main considerations are at least two sub-considerations.

- Natural Connections - amber
- Walking, Cycling and Public Transport – amber
- Facilities and Services - red
- Homes for Everyone – amber
- Making the most of what's there – amber
- A memorable character - amber
- Well defined streets - red
- Easy to find your way around - amber
- Healthy Streets - red
- Cycle and Car Parking - amber
- Green and Blue Infrastructure – amber
- Back of pavement front of home – amber

1. Natural Connections - amber

RTC concluded that the proposed pedestrian and cycle links are acceptable and hence deemed to be a 'green' light.

RTC set out the following 'amber' comments:

- *Street patterns have been revised to provide more direct and less curvilinear routes through the site.*
- *Cycle / pedestrian routes through the Green Infrastructure respond better to desire lines through the site. However, there are more opportunities to provide permeability through the wider site to the west (Willow Drive).*
- *Landscaping strategy seeks to enhance and replant hedgerows and incorporates a biodiversity net gain within the design.*

There is no local policy or design requirement for 'less curvilinear' streets or indeed a grid pattern of streets. In Phase 1 there is a proposed mix of straight and curved roads. NFDC Environmental Design noted the simple clarity of the street alignment.

The land to the east of Willow Drive is within Phase 2. The Access and Movement

Parameter Plan does not show an access here as it is currently understood that the land along the boundary is in private, rather than public, ownership, and hence facilitating a new access at this point would not likely be straightforward.

It is unclear why RTC deem the fourth matter to be amber when they acknowledge that the landscape strategy has addressed native planting and biodiversity net gain.

2. Walking, Cycling and Public Transport

RTC concluded that the following are a 'green' light:

- *Retains existing footpath and provides additional link through to opposite sports pitches. Routes for cyclists and pedestrians are indicated through to the Castleman Trailway / Crow Arch Lane with dedicated off-road cycle and footpath through the green infrastructure from the south-west boundary of the site.*
- *Pedestrian link would be provided to Christchurch Road and nearest bus routes.*
- *It is understood that the road design plans for a potential future bus route through the site.*

RTC set out the following 'amber' comment:

- *whilst pedestrian and cycle routes through the site are more direct however opportunities for improved connectivity still exist.*

Phase 2 will be providing further access arrangements in line with the Movement and Access Parameter Plan.

RTC also conclude that the following are a 'red' light:

- *Street layout is focused on highways engineered design with large corner radii. This does not prioritise pedestrian users and can create undesirable situations by encouraging cars to turn more quickly while pedestrians navigate wider or convoluted crossing points.*
- *The principal street does not indicate any protected cycleway or prioritisation of cyclists at junctions and parking layout may lead to dangerous manoeuvres onto key shared routes.*

The Local Highway Authority has, as set out earlier in the Committee Report, accepted the proposed internal street layout and highlighted that detailed design matters can be addressed at the s38 (road adoption) stage. The broad cycle strategy, as set out in the Movement and Access Parameter Plan, is to prioritise cycling through the primary off-road route which connects Christchurch Road to Crow Arch Lane. The DAS (p. 84) sets out that the primary access route from Moortown Lane includes a 3m wide shared pedestrian/cycle route on the eastern side of the road.

3. Facilities and Services

RTC concluded that the following are all a 'red' light:

- *Incorporates formal and informal recreation space (POS, LAP/ LEAP/ ANGR/MUGA, walking and cycle routes / dog agility area), however the ANRG is*

on a remote parcel of land. There is no direct access from the site to this area. The wider open spaces are also segregated from the built development, rather than being integrated through within Phase 1.

- *Pocket park areas (in future phases) would enjoy a good degree of passive surveillance, well overlooked. But lacking for the LEAP and NEAP proposed as part of Phase 1.*
- *This is a major housing development which does not incorporate any community facilities, such as a small convenience shop. The wider walkability and cyclability of routes to existing key facilities should be further explored as connecting roads / paths do not provide safe and accessible options for all.*

The ANRG for Phase 1 is adjacent to the proposed housing as clearly set out on Land Use Parameter Plan. RTC appear to be referring to the parallel application (Ref: 23.10707) for additional public open space east of Crow Lane (which will be determined separately).

The LEAP and NEAP will both have adequate surveillance from other users of the public open space and the closest houses to the west in Phase 1 and Phase 2 respectively. There is always a matter of balance to be struck when siting play areas. For example, amenity issues could arise if larger play spaces were sited too close to housing and potentially impacted the occupiers.

There is no specific Policy requirement for a small shop. Moreover, a scheme of 443 dwellings is unlikely to have sufficient critical mass to support a shop in an estate location where passing trade may not be sufficient to support a viable business. There is an existing small shop at the petrol station on Christchurch Road and it remains the Policy objective to connect through to Wellworthy Way and the Lidl store through subsequent development within the Allocation Site.

4. Homes for Everyone

RTC concluded that the following is a 'red' light:

- *Affordable housing appears to be distributed in poorer quality settings within the development, with none provided on the edges fronting the surrounding G.I or internal green open space.*

There is no Policy requirement for affordable housing to be sited adjacent to public open space. The proposed affordable housing is distributed across Phase 1 rather than concentrated in one area and all the housing – affordable and market - is within short walking distance of the proposed large public open space in the centre of the Allocation Site.

RTC set out the following 'amber' comment:

- *The mix and range of housing would appear to meet with Local Plan Requirements. However, the Town is in need of smaller homes (1 bed and 2 bed units) and the proportion of these could be increased.*

As set out earlier in the Planning Assessment, the proposal provides 202 (45.6%) smaller (1 and 2 bed dwellings across all tenures) out of a total of 443 dwellings on an edge-of-settlement scheme. If the proposal were to include a significantly increased proportion of smaller market units this could impact development viability and hence the overall percentage of affordable housing.

5. Making the most of what's there.

RTC set out the following 'amber' comment:

- *The design background references positive local characteristics however the integration of these in the final design is variable.*

This comment is noted by NFDC Officers as reasonable design criticism.

RTC conclude that the following is a 'red' light:

- *The scale relationship of the development to that surrounding is not clearly demonstrated of note with the existing properties to the west.*

As set out earlier in the Planning Assessment, the scale of the proposed dwellings across Phase 1, including the two 3 storey houses, is considered suitable. Given the separation distances of between 25 and 30 metres between the proposed houses on the western boundary of Phase 1 and the existing houses to the immediate west – which are themselves mixed in terms of storeys – it is considered that there is no notable discordant visual relationship between the existing and proposed houses at the western boundary. However, a condition is proposed for plots 1 to 14 inclusive which removes permitted development rights which will enable the LPA to review any future proposals to extend these dwellings.

6. A memorable character

RTC set out the following 'amber' comments:

- *The design seeks to reflect local vernacular in building design and materials palette, subject to agreement of high quality / natural materials. It also incorporates focal point buildings at key positions.*
- *Some of the detailing of the buildings is not reflective of local vernacular.*

NFDC Officer's note this as reasonable design comment. For reference, as set out, materials for Phase 1 buildings will be secured through a suitable condition.

RTC conclude that the following is a 'red' light:

- *The high degree of variety in the building design, number of different housing types does not create cohesion or clearly identifiable streets / character areas or a sense of place.*

Whilst this conclusion is noted, Officers are of the view that the variety of housing types and design can – as well as addressing identified housing need - be a positive visual attribute as a scheme is occupied and matures. For reference, NFDC Environmental Design commented that the proposal was too homogenous and there is commentary above in response to this point.

7. Well defined streets

RTC concluded that the proposed frontages are active and hence a 'green' light.

RTC conclude that the following is a 'red' light:

- *Building lines lack strength and continuity particularly along the primary route and there are a number of large gaps in the streetscene.*

Whilst Officer's note this comment as reasonable design criticism there is no Policy requirement or local design guidance for building lines to accord with a specific pattern. As set out, the primary route is notably curved and hence the associated building line reflects the road alignment. Where the purported large gaps in the street scene actually are is not set out.

8. Easy to find your way around

RTC set out the following 'amber' comment:

- *The highway design is more direct with hierarchy differentiation between primary and secondary routes. However, the scheme does not demonstrate how it will incorporate navigable features for those with visual, mobility or other limitations.*

The Design and Access Statement (DAS) (p.110) sets out (emphasis added):

Within the public realm spaces and key locations, mature stock specimen trees will be planted as landmark features, acting as visual wayfinders. The size and species of trees should be dependent on their specific location and purpose and should correspond to the surrounding streetscape and character.

The detailed landscaping for both the housing area and public open space will be subject to conditions where this design objective will be sought through suitable trees.

RTC also concluded that the following is a 'red' light:

- *Focal points are incorporated within the design. However, elements of the building design (variety of typologies and variable building lines) do not create clear street identity.*

The variety of typologies proposed is supported both in terms of meeting the broad range of housing needs set out in Policies HOU1 and HOU2.

The DAS sets out (emphasis added) with regard to the landscaping (p.63 and 110)

The selection of paving materials within the public realm, will be utilised to assist in place making and create identity within the development. Along with the elevational treatments of the buildings, the landscape materials will reinforce the different character areas within the scheme and establish a suitable hierarchy

Planting within the scheme will be utilised to enrich biodiversity, assist in place making and create identity within the development. Along with the elevational treatments of the buildings, the landscape materials and planting proposals will reinforce the different character areas within the scheme and provide continual reference to the surrounding landscape.

As such, subject to detailed landscaping conditions, it is considered that the applicants have reasonably considered the need to create a suitable identity within Phase 1.

9. Healthy Streets

RTC concluded that the following are 'red' lights:

- *Street design is principally focused on vehicles and parking which does not prioritise the pedestrian, or cyclist experience.*
- *Although green pockets are provided on key corners and new buildings benefit from modest front garden areas, there is little public landscaping throughout the built-up areas of the development. Occasional, informal spaces and facilities / street furniture is limited and some areas of landscaping are nominal, such that they may be prone to damage and future loss.*

The applicants have a requirement to demonstrate that the proposal is safe in highways terms which the LHA has accepted. The applicants also have a policy requirement to provide a suitable quantum of parking of vehicular parking spaces for future occupiers and visitors in line with the NFDC Parking SPD, which Officers consider that the application has addressed. All the primary and secondary routes with the Phase 1 Masterplan have dedicated pavements.

The proposal has a suitable network of proposed pedestrian and cycle routes. Moreover, this element of the RTC Building for a Healthy Life assessment is slightly confusing as the earlier category 'Walking, Cycling and Public Transport' identifies this consideration as a 'green' light.

In line with the Public Open Space Landscape sub-section of the Planning Assessment, it is considered that there is sufficient landscaping within the Phase 1 housing area and that a suitable detailed design can be secured through conditions.

10. Cycle and Car Parking

RTC concluded that the proposed cycle parking is a 'green' light.

RTC set out the following 'amber' comments:

- *Rear parking courts are used to reduce the dominance of parking of the street environment. There are however areas where there is reliance on tandem parking and parking arrangements which could pose additional hazards for other cars.*
- *Electric vehicle charging units will be supplied with each new property with on-plot parking and ducting supplied for future installation in more remote parking spaces.*

As set out in the Highways, Access and Parking sub-section of the Planning Assessment, tandem parking spaces are an acceptable parking solution in line with the NFDC Parking SPD paragraph 5.5. The appraisal is not clear on which 'parking arrangements' within the proposal are additionally hazardous for other cars. The supporting extract picture from the Phase 1 Masterplan shows surface parking spaces for plots 16 to 19 with clearly differentiated surface materials for the parking spaces and the shared surface route.

The applicants have proposed a comprehensive electric vehicle charging strategy – it is not clear why RTC has indicted this material consideration as amber rather than green in the assessment.

RTC also conclude that the following is deemed to a 'red' light and hence needs revision:

- *The design is not clear on how it will anticipate or design out anti-social car parking.*

As set out, the Phase 1 Masterplan includes notable planting at the interface of the housing area and public open space. Detailed landscaping conditions will secure any necessary further features which could include bollards or bunds for example (in line with the condition imposed on the Cala Homes scheme in Fordingbridge).

11. Green and Blue Infrastructure

RTC concluded that the following are 'green' lights:

- *Sustainable Urban Drainage Systems have been incorporated into the design.*
- *Comprehensive landscape strategy has been submitted which incorporates a range of habitats and reflects biodiversity net gain being sought.*

RTC set out the following 'amber' comment:

- *There are some small areas of land around the development offer limited value and can be prone to neglect.*

All the public open space will be subject to management company maintenance (see Design and Access Statement p.116).

RTC also conclude that the following is a 'red' light:

- *The majority of green spaces on site are segregated from the built development with limited positive integration although this appears to be improved in future phases.*

All of the proposed dwellings in Phase 1 are within a short walking distance of the large public open space in the centre of the application site. There are five pedestrian connection points set out in the Phase 1 Masterplan between the SW corner (opposite plot 14) and adjacent to plot 130 which allow access to public open space.

Moreover, it should be noted that the Local Plan Concept Masterplan for SS13 does not include any potential public open spaces within the two main housing parcels identified – the proposal includes various smaller areas of public open space as part of their overarching landscape strategy which is supported.

12. Back of pavement front of home

RTC set out the following 'amber' comment:

- *Modest defensible space provided at the front of properties which could be reinforced by stronger boundary treatments.*

The Phase 1 Masterplan sets out that the primary boundary treatment used at the front of properties will be low-level hedging which is considered an acceptable boundary treatment for a suburban area.

For reference, the applicant provided their own Building for a Healthy Life Assessment in May 2024 which set out, through the provision of examples, had achieved 'green' on each of the 12 main areas.

As such, there remains clear differences between the applicants Building for a Healthy Life Assessment and Ringwood Town Council's Building for a Healthy Life Assessment in terms of the scoring each sets out. Notwithstanding this, the applicants has satisfied the second paragraph of RNP Policy R8 (Building for a Healthy Life) by virtue of submitting a Building for a Healthy Life Assessment in the supporting material.

Notwithstanding these differences between the applicant and Town Council, the NFDC Officer assessment of the relevant material considerations arising from the Assessment is set out throughout the various chapters of this report with the conclusions drawn against the relevant development plan policy and other material considerations.

v. Ringwood Town Council Neighbourhood Development Plan

The Ringwood Town Council Neighbourhood Development Plan Policy R7 (The Ringwood Design Code) is set out in the Public Open Space and Landscape sub-section of the Committee Report. The following comments are set out in relation to RNP Policy R7 and the proposed design:

- The Phase 1 proposal includes a suitably legible layout based on three distinct character areas and differentiation in street design.
- The proposal has taken broad account of local character particularly with regard to residential typology and building materials and sufficiently reflects the relevant guidance in the Ringwood Design Code (Appendix B).
- The proposal will deliver biodiversity net gain and provides over 9 ha of public open space adjacent to the housing in both phases.
- Each house and maisonette in Phase 1 will have a rear garden (amenity space) and each flat will have access to semi-private communal space.
- As set out, the proposal will provide a network of pedestrian and cycle routes which connect into the local area to the north, south and south-west.
- The proposal includes an off-road cycle and pedestrian route through the Phase 1 public open space which connects Crow Arch Lane to Moortown Lane.
- The front spaces of the dwellings are generally open rather than enclosed as suggested in the Ringwood Design Code.
- As set out later in the Planning Assessment, on-site lighting in Phase 1 will be subject to a suitable condition.

As such, it is considered that the proposal is in broad accordance with the adopted Ringwood Design Code and Guidance (RNP Appendix B) and hence RNP Policy R7 (The Ringwood Design Code).

vi. Summary

As set out, the application received detailed objections from NFDC Environmental Design and Ringwood Town Council. Essentially, whilst noting these objections and whilst agreeing with some, but not all of the criticism set out in their representations, on balance the design of the proposed development is considered to be acceptable in light of the following:

- The proposal clearly accords with the Local Plan Concept Masterplan (p. 150). The application includes a major parcel of housing in the westernmost portion of the allocation site with a smaller parcel in the centre. The proposed public open space in the application site is more expansive than that indicated in the Concept Masterplan and the smaller central housing parcel has a greater separation distance from Moortown Lane. The proposal builds up to the western boundary of the site in line with the Concept Masterplan in support of policy SS13.
- The proposal is supported by an Illustrative Masterplan and Phase 1 Masterplan, a set of Parameter Plans and a Design and Access Statement, all in line with the design guidance set out in the national PPG;
- The proposal makes effective use of land in line with NPPF paragraphs 128 and 129 and takes account of the identified need for different types of housing in terms of tenure and typology – and this is consequently manifested in the housing proposed. Significant weight should be placed on this. The built density in Phase 1 ranges between 25 and 45 dph with an average of 38 dwellings per hectare and this reflects the Linden Homes scheme immediately to the north.
- The proposed scale is 2 and 2.5 storey buildings which broadly reflects much of suburban Ringwood. There are only two 3 storey houses and these are sited in the centre of Phase 1.
- The three proposed character areas for Phase 1 set out in the DAS are appropriately mixed for a scheme of only 150 dwellings in Phase 1 in terms of appearance and materials. The proposed street layout includes a hierarchy of streets in line with the national guidance document Manual for Streets.
- Phase 1 includes an adequate number of street trees. However, the criticism from NFDC Environmental Design of the street tree design is noted and an informative will be added to inform a subsequent Reserved Matters application for Phase 2.
- The proposed defensible space to the front of dwellings is generally modest in scope but this is in line with both recent developments and some areas of older housing in Ringwood.
- The housing design includes a suitably wide range of residential typologies typically found in suburban sites such as detached, semi-detached and terraced houses and the generally traditional building materials proposed are broadly in line with published local design guidance.
- The Phase 1 rear gardens are at least proportionate to the host dwelling and some dwellings (market and affordable homes) have generously proportioned rear gardens for a modern housing scheme. All house and maisonette gardens have capacity to store cycles and bins and rear garden access can be secured with suitable access locks. Suitable bin collection points outside private curtilages are set out. The proposed flats all have integral cycle and bin storage.
- Given the separation distances (25 to 30 metres) between existing dwellings to the west and the proposed rear elevation of houses in the westernmost portion of Phase 1 it is considered that no significant amenity issues will arise subject to a removal of permitted development rights on a limited number of plots.

- Spaces within Phase 1 housing have sufficient surveillance from dwellings and public routes. The Hampshire Constabulary Design Advisor comments will be taken into account when the proposed detailed landscape conditions are addressed.

Taking these factors and the commentary set out earlier in the Planning Assessment on housing, highways and access, and public open space and landscape - on balance of considerations - the proposal does satisfy the design test in NPPF paragraph 135 subject to a planning obligation and suitable conditions.

The representations from Ringwood Town Council on design including the completed Building for a Healthy Life Assessment are fully noted and have been addressed in the report. The conclusions of the applicants Building for a Healthy Life Assessment submitted in May 2024 is also noted.

However, for the reasons set out, it is concluded that the proposal is of sufficient design quality and therefore does not fail the design test in NPPF paragraph 139.

In summary, whilst the design solution proposed could be improved in certain areas, overall the proposal provides a sufficiently well-designed and integrated southern extension of Ringwood.

As such, the proposal accords with Local Plan Policies SS13 criteria (iii), HOU2 criterion (iv) and ENV3 criteria (i),(iii) and (vii). NPPF paragraphs 128, 129 and 135 and broadly accords with Ringwood Neighbourhood Plan Policy R7 (The Ringwood Design Code).

10.7 Heritage Assets

Local Plan Policy DM1 (Heritage and Conservation) sets out that development proposals, inter alia, should conserve and seek to enhance the historic environment and heritage assets with particular regard to local character, setting, management and the historic significance and context of heritage assets. The supporting text acknowledges the role of archaeology and archaeological sites.

The application is supported by the EIA Environmental Statement Chapter 7 (Cultural Heritage) (Campbell Reith; December 2021) which sets out the effects of the proposed development on cultural heritage ('heritage assets'), including buried archaeological remains.

The NFDC Conservation Officer has raised no objection to the proposal subject to suitable conditions. The requested condition relates to the protection of the listed milestone on Moortown Lane (also identified in Appendix D of the emerging Ringwood Neighbourhood Plan) during the course of the works.

The Council's Archaeologist provided a revised and updated representation in May 2024. The archaeologist raised no objection the proposal subject to suitable conditions. The applicants have conducted field investigations and post-excavation analysis is ongoing with a view to be finalised in the next 9 to 12 months.

Historic England made no specific comments.

Therefore, subject to conditions, the proposal satisfies Local Plan Policy DM1.

10.8 Infrastructure and Developer Contributions

Local Plan Policy IMPL1 (Developer contributions) sets out that all developments must provide or contribute proportionately to the provision.

Following assessment of this application and taking into consideration the requirements as set out in the Local Plan and Infrastructure Development Plan the following are the proposed Heads of Terms for a Section 106 Agreement. The Agreement will need to be completed prior to the issue of any planning permission and would seek to deliver the following benefits with contributions based on current rates as of 1 April 2024 and index linked:

Affordable Housing - provision of 75 Affordable Housing units as shown on submitted Phase 1 Housing Tenure Plan (Pegasus, Ref: P21-1078_DE_003_0107_B, 20/03/2024). Affordable Housing for Phase 2 comprises 58 units with siting and typology to be determined in a Reserved Matters application.

Air Quality Monitoring Contribution - £48,287.

Alternative Natural Recreational Greenspace, Public Open Space (POS) and play spaces - to be delivered by the applicant and subsequently privately managed with a long-term management and maintenance plan setting up of management company and provisions to safeguard against the scenario whereby management is not undertaken properly or the management company ceases to operate and setting up monitoring arrangements

Biodiversity net gain (BNG) - long term management/maintenance plan setting up of management company and provisions to safeguard against failure and setting up monitoring arrangements. Monitoring charges. 30-year minimum time span for BNG on site. BNG to cover whole of development site with all trees and soft and hard landscaping maintained for minimum period of 30 years.

Community Facility Contribution - Off-site Community Facility contribution of £192,700.00.

District Council Monitoring Charges

- Recreational Habitat Mitigation commencement - £847.00
- Recreational Habitat Mitigation on-site monitoring and/or inspections - £36,534.00
- Affordable Housing Monitoring - £847.00
- Biodiversity Net Gain on-site monitoring - £15,675.00
- .Public Open Space (informal, play areas and landscaping) - £10,294.50

Formal Public Open Space - (playing pitches and infrastructure) - Off-site contribution of £110,000.

Habitat Mitigation - (Non-infrastructure contribution) - Based on the agreed total Housing Mix (Phases 1 and 2) this equates to a payment of £383,150.

Linden ('Ring 3') SANG Footpath - improvement contribution of £24,000.

Hampshire County Council Provisions

The following contributions and provision to be included with contribution/fee amounts and triggers:

Primary Education in Ringwood - Total contribution of £2,465,274 towards the future

expansion of primary school(s) in Ringwood.

Countryside Services - Public Right of Way Improvements and Maintenance contribution of £127,500.

Local Highways Authority - The Local Highway Authority (LHA) and applicant have agreed an acceptable contribution of £1,040,588 to be secured by s106 planning obligation towards highways and access improvements (as set out).

As such, It is estimated that the total s106 contribution will be approximately £4.4 million across both phases.

Community Infrastructure Levy

The total market housing floorspace in Phase 1 is 9,491.53m². With a current CIL charging rate of £117.23 per square metre, a total CIL fund of approximately £1,112,000 would arise from Phase 1.

Impact on local infrastructure

A significant number of representations from the local community set out objections in relation to the potential impact of the proposal on local infrastructure including schools, healthcare, dentists and veterinary surgeons.

The full education contribution required by the Local Education Authority (as set out above) would be to expand capacity at either Ringwood Infant and Junior schools – or Poulner Infant and Junior Schools. For reference, any possible amendments to the school catchments in Ringwood is a Local Education Authority matter considered outside of planning. It is understood that the Local Education Authority is not currently pursuing the option of a new primary school on land south of Moortown Lane as set out in Local Plan Policy SS13.

NFDC do not generally seek contributions towards healthcare facilities, and these are usually matters for central government funding. However, the CIL funds provide an opportunity for suitable bids from service providers to be considered alongside other projects.

Community focal point

Local Plan Policy SS13 criterion (iii) (c) sets out the following masterplanning objective for the site:

Providing a community focal point in a prominent location including ground floor premises suitable for community use

There is no supporting text in the Local Plan which provides further detail on this masterplanning objective. In lieu of a 'community focal point' which provides ground community use floorspace an additional contribution of £192,000 towards local infrastructure provision, and secured through a s106 planning obligation, is proposed to be made to Ringwood Town Council.

As such, subject to a s106 planning obligation, the proposal accords with Local Plan Policy SS13 criterion (iii)(c).

Broadband

The Planning Statement (paragraph 6.169) acknowledges the need for new dwellings to be connected to broadband internet. This can be secured through a suitable condition.

10.9 Other Matters: Impact on Residential Amenity, Environmental Health, Sustainable Construction and Design, Mineral Safeguarding

Local Plan Policy ENV3 (Design quality and local distinctiveness) criterion (ii) sets out that new development will be required to avoid unacceptable effects by reason of visual intrusion or overbearing impact, overlooking, shading, noise and light pollution or other adverse impacts on local character or residential amenity.

Local Plan Policy CCC1 (Safe and healthy communities) criterion (i) sets out that development should not result in pollution or hazards which prejudice the health and safety of communities and their environments including air quality and the water environment. Criterion (iv)(c) sets out that on contaminated, polluted or unstable land unless it is first adequately remediated or otherwise made safe for the proposed use and for the local community prior to occupation.

Local Plan Policies STR1 and STR9 both advocate sustainable development, and the re-use of minerals that might be found on the site will be part of that requirement. The Hampshire Minerals and Waste Plan (HMWP) (October 2013) is part of the New Forest development plan. HMWP Policy 15 (Safeguarding Mineral Resources) sets out that Hampshire's mineral resources are safeguarded against needless sterilisation by non-minerals development, unless 'prior extraction' takes place.

i. Residential Amenity

Likewise given the separation distances, it is considered that the proposed housing (plots 1 to 14) would not give rise to over-shadowing to the occupiers of the existing housing to the west. Nor would the proposed housing (plots 1 to 14) give rise to overbearing impact given their two-storey design.

In terms of sunlight and daylight impact on the occupiers of the existing dwellings on the western boundary, whilst there may be some minor loss of early morning sun to their gardens and rear facing windows, it is not considered that the proximity of the new dwellings will be significantly detrimental to the lighting of habitable rooms which is the key consideration. Given the distances and relationship of the new properties to the existing it is considered that on balance the loss of early morning sun would be clearly insufficient to justify a refusal of planning permission.

Additionally, some representations have requested public open space on the western boundary. However, the Local Plan Concept Masterplan for SS13 sets out that residential development is acceptable in principle up to the western boundary and as such there is no policy requirement for the site promoters to provide public open space here.

Amenity considerations for the residual area (north of plot 1) on the western boundary in Phase 2 will be addressed in a subsequent Phase 2 Reserved Matters application. Given the context of the site and the separation distances arising between the residual part of the Phase 1 housing and existing dwellings to the north, east and south it is considered that there are also no significant amenity issues arising by virtue of over-shadowing, overlooking or overbearing impact. However, as set out, a condition is proposed for plots 1 to 14 inclusive which removes permitted development rights which will enable the LPA to review any future proposals to extend these dwellings.

The proposed NEAP and LEAP play areas in the Phase 1 public open space is sited at least 15 metres away from the nearest housing in the proposal. This is considered appropriate given the need to balance amenity issues with the need for a degree of surveillance of the play areas. Additionally, the NEAP is located at least 25 metres from the rear gardens of the two existing dwellings on Crow Arch Lane which is considered an acceptable separation distance.

The separation distances within the proposed Phase 1 housing are acceptable and should not give rise to any significant amenity issues by virtue of overbearing impact, overshadowing or overlooking.

Suitable conditions will be added with regard to construction hours of operation

As such, the proposal accords with Local Plan Policy ENV3 criterion (ii).

ii. Air Quality

The applicants have provided a Air Quality Assessment (Environmental Statement, Hydrock and Campbell Reith, Appendix 6.1, December 2021).

NFDC Environmental Health have set out that they accept the findings of the Air Quality Assessment and supplementary data and welcome the proposed mitigation measures outlined in the original report (Paragraph 6.156) as well as a Construction Environmental Management Plan (CEMP) to be secured through a suitable condition in order to ensure dust is controlled during the construction phase.

As such, subject to suitable conditions, with regard to air quality the proposal accords with Policy CCC1 criterion (i).

iii. Noise

The applicants have provided a Noise Survey and Assessment (Environmental Statement, Hydrock and Campbell Reith, Appendices 10.1 to 10.3, December 2021). NFDC Environmental Health has provided comment on both the Full stage (Phase 1) and the Outline stage (Phase 2) on the material consideration of noise.

Phase 1: This section of the site is close to Moortown lane and to the sports pitches. The Noise Impact Assessment provided suitably characterises the site in line with a stage one assessment. This gives an indication that some properties will need trickle filtration, particularly in this segment of the development, although at this stage the properties requiring trickle ventilation have not been identified. As such, a full stage 2 Acoustic Design Statement (ADS) condition is required.

Phase 2: Although these areas of the scheme are all residential and generally in the areas of the site with a quieter background level, further consideration of noise levels affecting the proposed residential properties is required, particularly as there are parts of the site that will require further mitigation and due to the application being for outline permission, the scheme is clearly open to change. Consequently, it is recommended a condition is attached to any granted permission requiring a Stage 2 Acoustic Design Statement to be undertaken at the detailed design stage to inform upon the final layout and design.

Both proposed conditions are agreed and as such, subject to these conditions, the proposal accords with Local Plan Policy ENV3 criterion (ii) with regard to noise.

iv. Odour and Flies

The foul water service provider Wessex Water confirmed via email in July 2022 that the application site had been reviewed by their odour scientist who has advised as follows:

- Odour Risk - There is a previous odour model from a developer for a much closer proposal, which would indicate this proposal is not at odour risk.
- Fly Nuisance - The proposed development is over 250 metres away from the boundary of the treatment works with closer existing residential property, so even though the treatment works site is high risk for flies, it should not cause the proposed development an issue.

Wessex Water concluded that in view of the above that they confirm that an odour and fly assessment will not be necessary for the application.

v. Lighting

NFDC Environmental Health has set out the following comment on the issue of lighting:

No lighting assessment has been submitted as part of this application. However, any lighting proposed as part of the proposal should be in such a way as to minimise light spillage beyond the area it is required, and particular avoid the façade of residential premises. Condition related to the maximum values of vertical illuminance is recommended.

Natural England has provided the following advice on a sensitive lighting strategy:

*A sensitive lighting scheme should be designed and implemented to maintain and retain dark corridors used as an important commuting corridor for bats as well as other protected and notable species. The Bat and Conservation Trust have produced a guidance document *Bats and Artificial Lighting in the UK*. Building regulations for domestic buildings specify that 150 watts is the maximum for exterior lighting of buildings but this does not apply to private individuals who install their own lighting.*

As such, it is recommended that a planning condition could secure a suitable lighting strategy for the application site which takes account of the comments from both NFDC Environmental Health, Natural England and the Hampshire Constabulary Design Adviser.

Therefore, subject to a suitable condition, the proposal accords with Local Plan Policies ENV3 criterion (ii) and DM2 and NPPF paragraph 191 criterion (c) with regard to lighting, amenity and protected species.

vi. Contaminated Land

A Preliminary Geo-Environmental Risk Assessment (Delta-Simons, April 2021) has been submitted with the application.

NFDC Environmental Health have no objection in principle to the proposed development as submitted. However, planning permission should only be granted to the proposed development as submitted if standard planning conditions 14a-14e are imposed. Without these conditions, the proposed development on this site could pose risks to human health and/or the environment and would result in an objection to the application.

As such, subject to a standard conditions 14a-e, the proposal accords with Policy

CCC1 criterion (iv)(c).

vii. Minerals Safeguarding

A Mineral Resource Assessment (Wardell Armstrong, October 2013) has been submitted. Published geological maps for the area indicate that the entire site is covered by a river terrace sand and gravel deposit, which is a safeguarded mineral resource and hence subject to Hampshire Minerals and Waste Plan (HMWP) Policy 15.

HCC Minerals and Waste requested that the applicant liaise with mineral extractors to see if third-party extraction was economic. This was undertaken and therefore In the absence of any known interest HCC suggest a condition requiring a scheme to be drawn up to show how any minerals found can be re-used on-site.

As such, subject to suitable conditions, the proposal accords with Local Plan Policies STR1 and STR9 and HMWP Policy 15.

viii. Sustainable Construction and Design

The report to NFDC Cabinet on 3 April 2024 Item 6 (Supplementary Planning Document: Planning for Climate Change pages 49-180) sought approval to adopt the supplementary planning document (SPD) Planning for Climate Change. The SPD was adopted by the Council and will be used in the determination of planning applications for the construction of new homes, commercial and community buildings.

Whilst the adopted NFDC Planning for Climate Change SPD does not strictly apply to applications already in the system prior to the April 2024 Cabinet meeting they have nevertheless offered the following information. The principal objective of the Climate Change SPD is to encourage developers to take reasonable steps to minimise expected carbon emissions when designing and constructing new buildings. The following proposals are made in respect of this development which can be further detailed at reserved matters and discharge of condition stage.

Additionally, the Department for Levelling Up, Housing and Communities website confirms that eFor reference, the NFDC major application validation requirements includes a Renewable and Low Carbon Statement.

The Design and Access Statement (DAS) (May 2024) sets out that Sustainable Building Techniques will be utilised. The DAS states (p. 114) that the proposal will be delivered in line with current building regulations, and where appropriate, will be built with sustainable building construction techniques and measures which include improved energy efficiency and recycling of materials.

The applicant has also submitted an Energy and Sustainability Statement (EaSS) (AES Sustainability Consulting, December 2021). Paragraphs 8.3 and 8.8 of the EaSS set out that:

- *The statement is intended to demonstrate that, following a fabric first approach to demand reduction, the proposed development will deliver a level of energy performance beyond the current Building Regulation standards whilst addressing a range of additional sustainable design considerations including how various sustainable transport provisions have been designed into the site.*
- *It is likely that some of the 323 dwellings on future phases (note: now 293*

homes) will be constructed to the interim Part L 2021 standards, or to the Future Homes standards. These dwellings will be constructed to meet the energy efficiency requirements outlined by the Building Regulations at the time of construction. To achieve this, an enhanced fabric specification would be utilised in conjunction with renewable energy technologies such as photovoltaic panels.

The Ringwood Town Council Neighbourhood Development Plan Policy R10: Zero Carbon Buildings sets out:

- A. All developments should be 'zero carbon ready' by design to minimise the amount of energy needed to heat and cool buildings through landform, layout, building orientation, massing and landscaping.
- B. Wherever feasible, all buildings should be certified to a Passivhaus or equivalent standard with a space heating demand of less than 15KWh/m² /year. Where schemes that maximise their potential to meet this standard by proposing the use of terraced and/or apartment building forms of plot size, plot coverage and layout that are different to those of the character area within which the proposal is located, this will be supported, provided it can be demonstrated that the scheme will not have a significant harmful effect on the character of the area.
- C. All planning permissions granted for new and refurbished buildings should demonstrate that they have been tested to ensure the buildings will perform as predicted prior to occupation.
- D. All planning applications for major development are also required to be accompanied by a Whole Life-Cycle Carbon Emission Assessment, using a recognised methodology, to demonstrate actions taken to reduce embodied carbon resulting from the construction and use of the building over its entire life. Consideration should be given to resource efficiency at the outset and whether existing buildings can be re-used as part of the scheme to capture their embodied carbon.
- E. An Energy Statement will be submitted to demonstrate compliance with the policy (except for householder applications). Applicants are directed to the Cotswold Net Zero Toolkit for guidance on matters to be addressed at pre-planning and initial design stage. The statement will demonstrate how opportunities to reduce the energy use intensity (EUI) of buildings over the plan period have been maximised in accordance with the energy hierarchy. Designers shall evaluate the operational energy use using realistic information on the intended use, occupancy and operation of the building to minimise any performance gap.

RNP Policy R10 sets out ambitious policy objectives that appear to go beyond relevant current adopted Local Plan policies. For example, the NFDC Cabinet report on 3 April 2024 set out (with regard to the now adopted Climate Change SPD) that

The Council is unlikely to be in a position to be able to refuse development if embodied carbon calculations (such as the Whole-Life Cycle Carbon Emission Assessment in Policy R10] criterion 3) are not included in the climate change statement, however, provision of this information will help assessment of the proposed development against adopted local plan policies STR1 & ENV3.

Likewise, the proposal does not meet Passivhaus standard (or equivalent) in line with the aspiration in the NFDC Climate Change SPD and criterion B in RNP Policy R10.

Essentially, the proposal has had adequate regard to the NFDC Climate Change SPD, taking into account the fact the application was submitted to NFDC in 2021 , and that there are potential opportunities to incorporate various sustainable construction and design features into the development in line with the submitted DAS and Energy and Sustainability Statement.

The proposal does not however meet the more ambitious objectives in the RNP including Whole-Life-Cycle Carbon Emission Assessments (criterion D) and certification to Passivhaus or equivalent standards (criterion B) and as such this matter will need to be considered in the balancing exercise in the conclusion.

ix. Community Engagement

The Design and Access Statement (DAS) (p.54-55) set out how the applicants undertook community consultation. This satisfies the NFDC application validation requirement for a Community Involvement Statement.

x. Local Economy and Employment Land

The scheme could have notable local economic benefits during construction, involving new employment in the construction industry. Construction workers could then bring additional spending into local services and as would future occupiers of the scheme in due course.

The proposal does not deliver new employment floorspace in the two hectares allocated in the north-west corner of the Local Plan Allocation Site but crucially it does not preclude its future delivery by a different landowner and should provide (as set out) a suitable new vehicular access on its southern boundary.

xi. HCC Public Health

A representation was received from HCC Public Health on 22/6/2023. The following observations are made:

- The Lifetime Homes standard was superseded in 2015 by M4(2) Part M of Building Regulations, which is broadly equivalent to the Lifetime Homes standard
- There is suitable distribution of affordable housing across Phase 1. The submitted Phase 1 Housing Tenure. Plan has been informed by advice from the NFDC Housing Manager. The proposed parking solution for affordable housing is broadly in line with the NFDC Parking SPD.
- The comments on highways and access are noted but the proposal has, subject to suitable conditions and a s106 planning obligation, the agreement of HCC Highways.
- The distances to local facilities were a material consideration in the allocation of SS13 during Local Plan examination and have not demonstrably changes in the interregnum
- The NEAP and LEAP both have sufficient surveillance from the public realm and some nearby dwellings.
- NFDC Environmental Health have been consulted with regard to noise and other amenity issues and this is set out in the Planning Committee report.

xii. Agricultural Land

NPPF paragraph 181 sets out that LPA should allocate land with the least environmental or amenity value, where consistent with other policies in this Framework. NPPF footnote 62 sets out that where significant development of agricultural land is demonstrated to be necessary, areas of poorer quality land should be preferred to those of a higher quality.

Agricultural land quality was addressed in the LPA's EIA Screening Response (07/04/21):

The specific agricultural land classification of the site was assessed at the local plan allocation stage as part of the sustainability assessment, in which it was considered as being of low quality. When compared to the available BMV land at district and county level, this loss will represent a very small percentage and would not be considered to be significant.

xiii. Summary

As such, subject to suitable conditions, the proposal addresses the material considerations of air quality, noise, lighting, contaminated land, mineral safeguarding, agricultural land quality and therefore satisfies Local Plan policies CCC1, ENV3 criterion (ii), STR1, STR9 and HMWP Policy 15. The Planning Committee report has addressed the comments made by HCC Public Health.

The proposal broadly accords with the direction of travel in the recently adopted NFDC Climate Change SPD in terms of sustainable construction and design. However, the proposal does not meet the more ambitious requirements of RNP Policy R10: Zero Carbon Buildings including potential Passivhaus (or equivalent) standards and a Whole Life-Cycle Carbon Emission Assessment.

10.10 Response to Ringwood Town Council and Local Objections

Having considered all matters in detail the following is a response to comments received from the Town Council and the local community. This includes an assessment of every letter of objection from residents. This report takes all those matters raised into account fully.

As set out, the proposal has received a significant number of objections in respect of the principle of development, which the allocation of the site in the Local Plan makes non-material. Other objections submitted are not supported by the technical advice of statutory consultees such as the Local Highway Authority, National Highways, Sport England, Natural England, the Environment Agency, and the Local Flood Risk Authority. No substantive alternative evidence has been submitted to set aside the views of statutory consultees.

Principle of Development and Housing

The application site is part of a strategic site allocated in the Local Plan for housing, public open space and employment floorspace. The proposed new housing and public open space on the land north of Moortown Lane lie within the Ringwood settlement boundary as defined in the Local Plan and as such is in the urban area as defined in the Local Plan. The proposed housing is located outside of the South-West Hampshire Green Belt following the Local Plan public examination process. The proposal is EIA development and an Environmental Statement is provided. The NPPF tilted balance also applies given the Council's housing land supply is just over 3 years when the rolling target is a supply of 5 years.

Recent Written Government Ministerial Statements do not undermine or in any way

change the allocated status of the site and do not change the legislative requirement that development is approved in accordance with the Development Plan unless other material considerations indicate otherwise.

The DAS (p. 16) acknowledges that the application site land comprised predominantly arable farmland utilised hitherto for mixed grazing and crops. The loss of this agricultural land was established through the Local Plan examination and the allocation for mixed-use development of Strategic Site 13 and as such is not a material consideration in the determination of this planning application.

The cumulative impact of the three Ringwood Strategic Sites was assessed through the Local Plan examination and there is no requirement in the Local Plan to stagger the delivery of allocation sites. The exclusion or inclusion of Ringwood within the National Park boundary was subject to prior public examination and is not a material consideration in the determination of this planning application. There is no requirement for this planning application to be subject to a local referendum. The positive potential for regeneration in Ringwood town centre and on previously developed land is noted but would be in addition to development on this Local Plan allocation site rather than instead of it. Increased Council Tax revenue is not a material consideration in the determination of this planning application.

There are significant public benefits arising from the delivery of 443 new dwellings in Ringwood of which 133 will be affordable housing with a policy compliant split of tenures including social rent, affordable rent and shared ownership with a suitable mix of typologies. There are also likely to be some economic benefits that flow from that including short term construction employment and longer term additional local spending on local services and in Ringwood town centre.

Local Plan Policy SS13 sets out that the site should deliver at least 480 new homes. This proposal would provide 443 and as such there is clear scope to provide in the plan period at the least the residual amount (37 homes) and likely a modest amount more in the residual areas identified for housing in the Local Plan Strategic Site 13 Concept Masterplan that are available and not within the functional floodplain.

The comments received on lack of bungalows in the scheme and the need for new housing for younger people are both noted. NFDC Officers will re-visit the matter of bungalows with the applicants in any future Phase 2 Reserved Matters application. It is considered that the package of affordable housing and the two-bed market housing provides an opportunity for younger people to potentially live in Ringwood.

Infrastructure

The Council can only impose a Section 106 Agreement and seek financial and other contribution requirements on those matters that meet the Community infrastructure Levy tests and the tests set out under Section 106 of the Planning Act. In this case those matters that can be covered relate to affordable housing, highway improvements, sustainable transport improvements, education enhancements, District and County Council monitoring of the development, maintenance of public open spaces, play and ANRG areas, formal playing pitch contribution, air quality, and habitat mitigation. The provision of new infrastructure will be staggered as payments are received and investment projects are planned. It is generally not feasible for all additional infrastructure to be put in place before the housing is built. Obligations must meet the necessary tests as set out in the NPPF and CIL Regulation 122. Consequentially the delivery of works secured by planning obligation are often phased relative to the scheme delivery to ensure that the mitigation is in place at the right time.

Contributions towards doctors and NHS dentists are not allowed for within the above and are subject to other market and Government budgetary regimes. The absence of these contributions does not, therefore, make the development unacceptable in planning terms. There may however be scope to bid for funds through the Community Infrastructure Levy (CIL) if a suitable bid were to come forward through that separate regulatory process. In total the developer will be expected to contribute circa £4.4 million towards local infrastructure and monitoring through a s106 planning obligation. This figure is not counting the Community Infrastructure Levy (CIL) of approximately £1.1m arising from Phase 1 and a likely significantly higher further amount from Phase 2. Additionally, some infrastructure providers (for example veterinary surgeons) are within the market sector and hence not subject to public sector contributions.

The Local Education Authority (Hampshire County Council) has identified the need for developer contributions towards primary school provision in Ringwood, which will be secured through a s106 planning obligation, but not towards secondary school provision.

There is no information in front of the LPA that suggests that the supermarkets, and the respective car parking facilities, in Ringwood could not accommodate the additional trade that may arise from occupiers in the proposed development.

Highways, Access and Parking

There are no objections from the Local Highway Authority, Active Travel England and National Highways, subject to suitable conditions and a s106 planning obligation, with regard to site access, on-site highways, off-site highway improvement works, site access, traffic impact and sustainable transport. The proposal contains new sustainable cycle and walking routes that suitably connect into the local area. The proposed vehicular parking is broadly in line with the NFDC Parking SPD requirements and cycle storage and electric vehicle charging will be provided to all dwellings.

There is no evidence in front of the Council that local car parks are at capacity. The issue of potholes on local roads are noted but remediation is a matter outside the determination of this planning application and for the Local Highway Authority (Hampshire County Council). No necessary upgrade between Moorcroft Lane and Burley Street was identified by the Local Highway Authority.

Flood Risk and Drainage

There are no objections from the Lead Local Flood Authority (LLFA) (Hampshire County Council), the Environment Agency (EA) and the foul drainage service provider Wessex Water. All of the proposed housing is located within EA fluvial flood zone 1 which is the sequentially preferred location for new residential development as set out in the NPPF. The proposal includes sustainable drainage systems which subject to suitable conditions have been agreed by the LLFA. Wessex Water has no outstanding objection subject to a suitable condition. It is understood that Ringwood sewage treatment works has had recent investment and is scheduled for upgrade works between 2024 and 2030.

Ecology

There are no objections from Natural England and the NFDC Ecologist and, subject to suitable conditions and a s106 planning obligation, the proposal has suitably addressed Habitat Mitigation and European designated nature conservation sites, phosphate mitigation, biodiversity net gain and protected species.

The Council agrees with the conclusions within - and will adopt - the shadow HRA and AA submitted in the application which concluded that the impact of additional phosphorous entering the River Avon will cause harm but that a scheme of mitigation can be brought forward to neutralise such harm.

Public Open Space and Landscape

The Phase 1 landscaping is acceptable subject to suitable detailed landscape conditions for both hard and soft landscaping across the public open space and housing development that will include a detailed tree planting schedule. The ANRG provision across both Phase 1 and Phase 2 provides an attractive open space, suitable links and vehicular crossing, and is appropriately sized and thus would be effective in diverting potential visits away from the New Forest designated European sites. The proposed Phase 1 LEAP and NEAP play spaces are both of a high-quality design and could be a benefit to the wider local community. The proposed NEAP provides play spaces for older children and younger teenagers and has been designed in light of the 'Make Space for Girls' principles. Further provision of public open space will be provided within Phase 2 of the scheme.

Representations objected to the possible loss of the existing football pitches south of Moortown Lane within the application site. There is no development proposed in the application this location which would change this existing use, There is however a new footpath parallel to the pitches as part of the improved access across Moortown Lane.

The Local Plan Concept Masterplan for Strategic Site 13 sets out that residential development is appropriate up to and along the western boundary of the application site and hence there is no policy requirement for additional public open space in this area.

Design

The representations from Ringwood Town Council on design including the completed 'Building for a Healthy Life Assessment' are fully noted and have been addressed in the Planning Committee report. However, for the reasons set out, it is concluded that the proposal is of design quality which is acceptable and as such does not fail the design test in NPPF paragraph 139.

Heritage Assets

There are no objections, subject to suitable conditions, from the NFDC Archaeologist, NFDC Conservation Officer and Historic England.

Residential Amenity

The Council has carefully considered the impact on local residential amenities both in relation to those adjoining the site and to the wider public. The impacts of construction traffic and works are to be managed through suitable conditions. The proposal will not give rise to any significant impacts on the amenity of occupiers of existing nearby dwellings through loss of privacy, overbearing impact and overshadowing. There are sufficient separation distances on the western boundary accounting for difference in land levels and the permitted development rights for plots 1 to 14 are removed through a suitable condition.

Other Matters

Other matters that are not a material consideration in the determination of the planning application are property values, loss of view and crime or the perception of increased crime.

A new cinema in Ringwood is not a material consideration for this planning application but Local Plan Policy ECON5 supports investment in town centres by applying a 'town centres first' approach for main town centre uses (as defined in the NPPF) which includes cinemas.

10.11 Planning Balance and Conclusions

Planning Committee Members will be aware that Section 38(6) of the Planning and Compulsory Purchase Act 2004 sets out the starting point for the determination of planning applications:

'If regard is to be had to the development plan for the purpose of any determination to be made under the Planning Acts the determination must be made in accordance with the plan unless material considerations indicate otherwise'

This site is allocated for mixed-use development within the adopted New Forest Local Plan (Strategic Site 13) and is planned to make an important contribution to the district's housing supply. As set out, NPPF paragraph 11 clarifies the presumption in favour of sustainable development.

Paragraph 11(c) states for decision making this means approving development proposals that accord with an up-to-date development plan without delay. The lack of a demonstrable five-year land supply, consistent with the recent Noads Way, Dibden Purlieu appeal decision means, however, means that the tilted balance in NPPF paragraph 11(d) is engaged for this application.

The proposal for 443 new homes will clearly make an important contribution to the District's housing land supply in line with Policy STR5 (Meeting our housing needs). The proposal would provide 92% of the minimum required in Local Plan Policy SS13 and as such will make a significant contribution to the established housing need in the District. The development will deliver 133 affordable dwellings with a Local Plan policy compliant tenure split mix including 47 social-rented units, 46 affordable-rented units and 40 shared- ownership units in a suitable mix of housing typologies and sizes.

The proposed housing mix falls slightly short of the requirement in RNP Policy R5 (Smaller Homes) which seeks a minimum of 50% smaller homes. However, the Local Plan strategic housing Policy HOU1 (Housing type, size, tenure and choice) is clear that site specific material considerations should also be taken into account. The slightly shortfall in smaller homes when considered against RNP Policy R5 is outweighed by the benefit of the delivery of housing in total.

RNP Policy R6 (First Homes) seeks a minimum of 25% of affordable dwellings to be 'First Homes', which is noted, but again is outweighed by the acute housing need in the District for those housing comprising the three tenures set out in Local Plan strategic affordable housing Policy HOU2 (Affordable Housing) and the proposal which would provide 133 of these units. On balance of considerations, RNP Policies R5 and R6 are outweighed in this instance by the material considerations as set out in the Committee Report.

As such, given the proposed housing, the balance is clearly in favour of permission and will meet the priority of meeting housing needs set out in the recently adopted

NFDC Corporate Plan 2024 to 2028.

No substantive alternative evidence has been submitted in representations to set aside the views of statutory consultees.

The proposal will be acceptable in terms of highways, access, vehicular parking, public transport, electric vehicle charging, public rights of way and pedestrian and cycle routes subject to a s106 planning and suitable conditions. Off-site highway and access improvements north of the application site will connect new residents to the Castleman Trail and hence local schools and the town centre. The proposal includes a comprehensive package of suitable off-site highway and access improvements including those delivered by the Local Highway Authority and funded via the £1,040,588 s106 contribution agreed between them and the applicants. The proposed highway and access elements within the application site are appropriate subject to detailed design in a s278 agreement. The proposal mitigates any impacts on existing Public Rights of Way both within the application site and off-site. The proposal provides a suitable level of residential parking and cycle storage. The proposed refuse storage and collection strategy is acceptable.

The proposal does not provide through access to Christchurch Road via the employment land nor Crow Lane as neither land parcel is under the applicant's control. However, suitable vehicular accesses are provided up to the respective boundaries with these residual land parcels and as such the proposal has addressed the relevant policy criteria as far as it reasonably could. The proposed site access arrangements have been accepted by the Local Highway Authority.

The proposal will be acceptable in terms of fluvial flood risk, surface water drainage and foul drainage, subject to suitable conditions. The proposal has demonstrated that there will be no inappropriate development within fluvial flood zone 3b in line with national planning guidance. The Lead Local Flood Authority agreed the proposed surface water strategy subject to conditions in April 2024. The foul water service provider confirmed in March 2024 that the proposal is acceptable subject to suitable conditions.

The proposal will, as set out in detail in the Planning Assessment, be acceptable in terms of habitat mitigation and European designated nature conservation sites, phosphates neutrality, biodiversity net gain and protected species. The applicant has carried out a shadow Habitats Regulation Assessment (HRA) and Appropriate Assessment (AA) under the Habitat Regulations (as amended) at this stage and concluded that the impact of additional phosphorous entering the River Avon will cause harm but that a scheme of mitigation can be brought forward to neutralise such harm. The Council will be seeking to adopt the shadow HRA and AA.

The proposal will also provide suitable public open space in the form of ANRG, informal open space and play areas. The proposal includes public open space on a north-south axis between Crow Arch Lane and Moortown Lane and thus will connect the town to the existing football club and allotments to the south through new non-vehicular routes and pedestrian crossings on Moortown Lane. The proposed NEAP and LEAP in Phase 1 are both high-quality play spaces. No development is proposed on the existing football pitch area south of Moortown Lane except a new non-vehicular access route parallel to the pitches. Detailed hard and soft landscaping in Phase 1 will be secured through suitable conditions. This will include a suitable tree planting strategy for the public open space and housing area.

The application was submitted before the Climate Change SPD was adopted in April 2024 and hence the recommendation to NFDC Cabinet in April 2024 that the SPD is

taken into account as a material consideration in the determination of all relevant applications that are submitted after the date of adoption is a material consideration. The proposal does not accord with the more ambitious Policy objectives set out in RNP Policy R10 (Zero Carbon Buildings). However, it is considered that any shortfall against Policy R10 is outweighed by the overall benefits of the proposal including the delivery of 443 new homes on Local Plan Strategic Allocation Site.

The proposed design is of sufficient quality to meet the requirements of NPPF paragraphs 135 and 136 and Policy ENV3 and has taken adequate regard of local design guidance. The detailed objections from NFDC Environmental Design and Ringwood Town Council, including the completed Building for a Healthy Life assessment, are noted and have been addressed in the Planning Assessment and are considered in this balancing exercise. Essentially, it is considered that any perceived shortcomings in the proposed design are clearly outweighed by the overall benefits of the proposal including the delivery of 443 new homes on Local Plan Strategic Allocation Site.

As set out in detail in the Planning Assessment, the proposal, subject to suitable conditions, will not have a harmful impact on heritage assets, archaeological remains, the New Forest National Park its setting and the special qualities and purposes of the National Park, trees, mineral extraction, air quality, noise and general residential amenity.

The proposal will include a substantial package of contributions of approximately £4.4m towards local infrastructure and mitigation to be secured in a s106 planning obligation. Significant further infrastructure funding should also come forward through the Community Infrastructure Levy (CIL) in Phase 2 based on the agreed housing mix in addition to the circa £1.1m likely to be secured through Phase 1.

Any identified harms carry weight in the decision making process including this planning balance. In this instance, the proposal does not accord with RNP Policies R5, R6 and R10. The proposed design has been subject to criticism but as set out in the report it is considered that the design does accord with the criteria in NPPF paragraph 135. The access arrangements would as set out in the report have some modest impacts on South West Hampshire Green Belt but this itself is balanced by the fact that the site access is within the Local Plan Allocation Site.

However, it is considered that any identified harms clearly do not significantly and demonstrably outweigh the identified benefits that the application will bring as set out in the above detailed report. Moreover, the collective weight of identified harms does not equate to an identifiable level of adverse impact whereby that impact would significantly and demonstrably outweigh the identified benefits that the application will bring as set out in the above detailed report.

Overall, given the significant public benefits including the delivery of needed market housing and affordable housing and the provision of substantial new public open space, the proposal is considered to be acceptable in line with relevant NFDC Local Plan Policies and the NPPF subject to suitable conditions and a s106 planning obligation.

As such, whilst not an ideal form of development, in accordance with paragraph 11(d) of the NPPF, on the balance of all material considerations, with significant weight placed on the substantial housing being brought forward, the proposal comprises sustainable development in line with Local Plan Policy STR1 (Achieving Sustainable Development).

Therefore, subject to suitable conditions and a s106 planning obligation, the proposal

accords with Local Plan Policies SS13, STR1, STR2, STR5 criterion (i), STR8 criterion (i)(b), STR9, ENV1, ENV2, ENV3, ENV4, HOU1, HOU2, CCC1 criteria (i) and (ii), CCC2, IMPL1, IMPL2 (i)(ii)(v) and (vi), CS7, DM1, DM2 and DM5, and Ringwood Neighbourhood Plan (2023-2036) Policies R1 criterion (D), R7 criteria (I, ii, iii, iv and vi), R8 (second Policy paragraph) and R11, and National Planning Policy Framework (December 2023) paragraphs 11, 96, 104, 114, 123, 128, 129, 135, 136, 165, 168, 173, 175 and 191(c).

11 RECOMMENDATION

Delegated Authority be given to the Service Manager (Development Management) to reconsult Natural England prior to the proposed adoption of the shadow HRA and AA, and to GRANT PERMISSION subject to:

- i. the prior completion of an agreement pursuant to Section 106 of the Town and Country Planning Act to secure the following:
 - Affordable housing provision (133 units);
 - Air quality monitoring contribution;
 - Alternative Natural Recreational Greenspace (ANRG), Public Open Space (POS) and play spaces including management and maintenance framework (including provision for the scenario whereby management is not undertaken properly or the management company ceases to operate)
 - ANRG Phase 1 Phasing Plan;
 - Biodiversity Net Gain management and monitoring;
 - Community Facility contribution in lieu of community focal point ;
 - District Council Monitoring charges (recreational habitat mitigation commencement and on-site monitoring and/or inspections, affordable housing monitoring, biodiversity net gain monitoring, public open space);
 - Formal public open space (football pitch) contribution;
 - Habitat Mitigation;
 - Linden Ring 3 footpath improvement contribution;
 - Hampshire County Council:-
 - Primary Education in Ringwood contribution;
 - Countryside Services (Public Rights of Way) contribution;
 - Local Highway Authority contribution.
- ii. the imposition of the conditions set out below and any additional / amended conditions deemed necessary by the Service Manager (Development Management), having regard to the continuing Section 106 discussions to ensure consistency between the two sets of provisions.

Proposed Conditions:

1. The development hereby permitted shall be begun before the expiration of three years from the date of this permission.

Reason: To comply with Section 91 of the Town and Country Planning Act 1990 as amended by Section 51 of the Planning and Compulsory Purchase Act 2004.
2. **Reserved matters time limit**

The application for the approval of reserved matters shall be made within a period of three years from the date of this permission. The development shall be begun no later than two years from the final approval of details.

Reason: To comply with Section 92 of the Town and Country Planning Act 1990 (as amended by Section 51 of the Planning and Compulsory Purchase Act 2004).

3. **Reserved matters details**

No development shall take place on any outline part of the site including site clearance and demolition works until the scale and appearance of the development which shall include detailed elevation and floor plans, and the hard and soft landscaping of the site (herein referred to as the reserved matters, as well as any outstanding conditions set out in this decision notice), insofar as they relate to the development, have been submitted to and approved in writing by the Local Planning Authority. The development shall be carried out in accordance with the approved details.

Reason: To comply with Section 92 of the Town and Country Planning Act 1990 (as amended by Section 51 of the Planning and Compulsory Purchase Act 2004)

4. **Approved Plans (Outline and Full)**

The development in Phase 1 and Phase 2 shall be carried out in accordance with the following approved plans:

Full (Phase 1) and Outline (Phase 2)

- Site Location Plan, Pegasus, 18/1/2024, P21-1078-DE-003-0100 Rev. A
- Building Scale Parameter Plan, Pegasus, 19/1/2024, P21-1078-DE-004-0110 Rev. A
- Land Use Parameter Plan, Pegasus, 19/1/2024, P21-1078-DE-004-0107 Rev. A
- Movement and Access Parameter Plan, Pegasus, 19/1/2024, P21-1078-DE-004-0108 Rev. A
- Building Density Parameter Plan, Pegasus, 19/1/2024, P21-1078-DE-004-0109 Rev. A
- Landscape Parameter Plan, Pegasus, 19/1/2024, P21-1078-DE-004-0112 Rev. B
- Landscape Masterplan and Alternative Natural Greenspace Strategy, edp 5444_d054q, 16 May 2024
- Open Space Strategy, edp 5444_d093l, 16 May 2024
- Alternative Natural Recreational Greenspace (ANRG) Strategy, edp 5444_d114a, 22 January 2024

The development in Phase 1 ONLY shall be carried out in accordance with the following approved plans:

Phase 1 (Full application ONLY):

- Phase 1 Masterplan, Pegasus, 27/3/2024, P21-1078-DE-003-0101 Rev. C
- Phase 1: Detailed NEAP Play Design, edp 5444_d067j, 16 May 2024
- Phase 1: Detailed LEAP Play Design, edp 5444_d099c, 16 May 2024
- ANRG Crossing, edp 5444_d117a, 15 March 2024
- Refuse Plan, Pegasus, 10/4/2024, P21-1078-DE-003-0102 Rev. B
- Boundary Treatment Plan, Pegasus, 10/4/2024, P21-1078-DE-003_0103 Rev. B

5. Maintenance of car parking spaces: Garages and Car Barns (Phase 1)

Notwithstanding the provisions of the Town and Country General Permitted Development Order 2015 as amended, (or any revocation, amendment or re-enactment of that Order), the garages and car barns hereby approved in Phase 1 whether integral or as outbuildings/extensions to the dwelling or shall not be converted into additional living accommodation but shall be kept available for the parking of private motor vehicles. All car barns shall be retained in perpetuity as open structures and shall not be fitted with external doors other than those shown on the approved plans.

Reason: To ensure a reasonable and adequate level of parking is retained for the dwellings hereby permitted and to prevent ad hoc parking on pavements, cycle/footways and verges in the interests of highway safety for both pedestrians and vehicles.

6. Residential Cycle Storage (Phase 1)

The residential dwellings in Phase 1 Plots 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 16, 17, 18, 19, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 98, 99, 100, 101, 102, 103, 104, 105, 106, 108, 109, 110, 111, 112, 114, 115, 116, 117, 119, 120, 123, 124, 125, 126, 127, 128, 129, 137, 138, 139, 140, 142, 143, 149 and 150 as set out in the Phase 1 Masterplan (Pegasus, 27/3/2024, Ref: P21-1078-DE-003-0101-C) hereby permitted shall not be occupied until a wooden garden shed with the agreed specifications set out below is provided in the rear garden:

- i. Shed Size: minimum 1.8m (depth) x 1.2m (width) x 1.85m (height).
- ii. Shed Framing EX 38x50mm (finish size 34x45mm).
- iii. Shed cladding (Shiplap) EX 16x125mm (finish size 12x120mm)
- iv. All timber is Redwood Viths.
- v. All sheds dipped with Protek PR30 water-based treatment (Light Brown)
Green Mineral Felt roof.
- vi. Standard Fittings (12" 300mm galvanised T-Hinges (1no pair); 2" 50mm galvanised Turn Buttons (2no); Hinges are fitted with security screws); and
- vii. A suitable combination or key padlock.

Reason: To satisfy Local Plan Policy ENV3 criterion (iv)

7. Waste Collection - Flatted Blocks (Phase 1)

The development hereby approved shall incorporate a suitably designed dropped kerb on the road parallel to the northern elevation of the integral bin store to serve the flatted blocks (Plots 41-45 and 92-96), which shall be suitably sized to enable bins to be safely manoeuvred and returned to the flatted blocks and installed prior to first occupation of the residential units to which the bin store serves. Bin storage points shall also be provided as shown prior to occupation of that part of the site to which the bin storage

point relates.

Reason: To ensure a satisfactory form of development compliant with Local Plan policy ENV3.

8. **Site Levels (Phase 1)**

Prior to the commencement of any part of the development of Phase 1, details of all intended land and site levels, including finished floor levels for all buildings, existing and proposed levels of public open space areas (including ANRG and all drainage basins and swales), and the existing and proposed site contours, shall be submitted to and agreed in writing by the Local Planning Authority. Development shall only proceed in accordance with the approved details.

Reason: To ensure that the development takes appropriate account of, and is responsive to, existing changes in levels across the site.

9. **Phasing of Development (Phase 1 - Full application area)**

Prior to the commencement of any part of the development including any site clearance and demolition works, a detailed phasing plan for Phase 1 (Full application area), including all on and off-site works, plot construction programme, all highway and drainage infrastructure works, green infrastructure works, landscaping, public open spaces, recreation facilities, and all on and off-site foul and surface water drainage works, shall be agreed in writing with the Local Planning Authority (LPA).

The phasing plan as so agreed shall be implemented in full unless any written variation has been agreed beforehand in writing with the LPA.

Reason: To ensure the development is fully completed in an acceptable timetable and in accordance with the approved plans hereby permitted.

10. **Public Right of Way Access**

No vehicles, machinery, equipment, materials, waste or anything else associated with the works hereby proposed shall be parked, stored or positioned on or near (10 metres either side) to Ringwood Footpath 45 or Ringwood Bridleway 509 as to cause an obstruction, hinderance or hazard to the public, who retain the right to use the Public Rights Of Way network at all times.

Reason: In the interests of highway safety and the protection and amenity of users of the public right of way.

11. **Public Right of Way - Diversion**

Should the proposed pedestrian crossing point of Moortown Lane on the site's southeast boundary be approved the applicant shall apply to an order making authority to divert the legal line of Ringwood Footpath 45 from its present alignment to that demonstrated in the Movement and Access

Parameter Plan, where the route is shown in a southwest-northeast alignment at its southern end adjacent to Moortown Lane.

Reason: In the interests of highway safety and the protection and amenity of users of the public right of way.

12. **Phase 1 Internal Pedestrian and Cycle Links Pre-Occupation**

The internal primary and secondary pedestrian and cycle links in the Phase 1 development as set out in the Movement and Access Parameter Plan (Pegasus, P21-1078- DE-004-0108 Rev. A) (19/1/2024) which connect to Crow Arch Lane (Crow Arch Lane to Castleman Trail Pedestrian and Cycle Route, I-Transport, 6/10/2020, Ref: ITB-12364-GA-008 Rev. H) should be provided prior to first occupation of Phase 1 and available for use in perpetuity.

Reason: In the interests of highway safety.

13. **Internal Primary Route Delivery and Standards**

The proposed internal primary routes which connect to (i) the Employment Land parcel in the north-west of the Allocation Site and (ii) the residual housing area in the north-east of the Allocation Site as set out in the Movement and Access Parameter Plan (Pegasus, P21-1078- DE-004-0108 Rev. A) (19/1/2024) will be provided to an adoptable standard to the boundaries of the application site to facilitate future vehicular, cycle and pedestrian access and provided prior to the 200th occupation in the application site.

Reason: In the interests of local accessibility and highway safety.

14. **Construction Traffic Management Plan (CTMP)**

No development hereby permitted shall commence, including site clearance or other demolition works until a Construction Traffic Management Plan (CTMP), to include details of provision to be made for the following, has been submitted to and approved in writing by the LPA following consultation with the Local Highways Authority and Highways England. The approved details shall be implemented before the development hereby permitted is commenced and retained throughout the duration of construction.

- viii. on site contractor's parking, and mess facilities
- ix. construction traffic access,
- x. site exiting construction vehicle and road cleaning procedures,
- xi. the turning and parking of delivery vehicles within the confines of the site,
- xii. lorry and delivery vehicle routeing to and from the site
- xiii. delivery times for construction materials including soil and hardcore
- xiv. a programme of works including phasing

Reason: In the interests of highway safety and local general amenity.

15. **Detailed Surface Water Drainage Strategy Scheme**

No development shall begin until a detailed surface water drainage scheme for the site (Phase 1 Full), based on the principles within the drainage strategy Hydrock Strategy Addendum, 27 March 2024, Ref: 21887-HYD-xx-xx-TN-c-0002 Rev. P06, Sections 2 (Surface Water Drainage Strategy) and 3 (Management and Maintenance) that has been submitted and approved in writing by the Local Planning Authority. The submitted details should include:

- i. A technical summary highlighting any changes to the design from that within the drainage strategy.
- ii. Infiltration test results undertaken in accordance with BRE365 and providing a representative assessment of those locations where infiltration features are proposed.
- iii. Detailed drainage plans to include type, layout and dimensions of drainage features including references to link to the drainage calculations.
- iv. Detailed drainage calculations to demonstrate existing runoff rates are not exceeded and there is sufficient attenuation for storm events up to and including 1:100 + climate change.
- v. Evidence that urban creep has been included within the calculations.
- vi. Confirmation that sufficient water quality measures have been included to satisfy the methodology in the Ciria SuDS Manual C753.
- vii. Exceedance plans demonstrating the flow paths and areas of ponding in the event of blockages or storms exceeding design criteria.

Details for the long-term maintenance arrangements for the surface water drainage system shall be submitted to and approved in writing by the Local Planning Authority prior to the first occupation of any of the dwellings. The submitted details shall include:

- i. Maintenance schedules for each drainage feature type and ownership; and
- ii. Details of protection measures

Reason: To prevent the increased risk of flooding by ensuring the provision of a satisfactory means of surface water disposal is incorporated into the design and the build and that the principles of sustainable drainage are incorporated into this proposal and maintained for the lifetime of the proposal.

16. No operational development within Flood Zones 2 and 3

There must be no operational development within Flood Zones 2 and 3, inclusive of ground level changes, roads, and drainage features. There shall be no raising of existing ground levels on the site within fluvial flood zones 2 and 3. There shall be no storage of any materials including soil within the 1% annual probability (1 in 100) flood extent with an appropriate allowance for climate change. Any walls or fencing constructed within flood zones 2 and 3 shall be designed to be permeable to flood water. Access arrangements must not be impacted by flood waters.

Reason: To prevent obstruction to the flow and storage of flood water, with a consequent increased risk of flooding.

17. Phase 1 Foul Water Drainage Strategy

No development shall take place until a detailed scheme to deal with foul sewage, including connections to existing off-site foul drainage systems have been submitted to and agreed in writing with the Local Planning Authority. No occupation of any Phase 1 dwelling shall take place until the approved scheme is implemented.

Reason: To ensure that a foul drainage scheme is available prior to the first occupation of Phase 1.

18. Phosphate mitigation and water efficiency

The development hereby approved shall not be occupied unless

- A water efficiency calculation in accordance with the Government's National Calculation Methodology for assessing water efficiency in new dwellings has been undertaken which demonstrates that no more than 110 litres of water per person per day shall be consumed within the development, and this calculation has been submitted to, and approved in writing by, the local planning authority; all measures necessary to meet the agreed waste water efficiency calculation must be installed before first occupation and retained thereafter;
- Proposals for the mitigation or offsetting of the impact of phosphorus arising from the development on the River Avon Special Area of Conservation (SAC), including mechanisms to secure the timely implementation of the proposed approach, have been submitted to and approved in writing by the local planning authority. Such proposals must:
 - (a) Provide for mitigation in accordance with the Council's Phosphorus Mitigation Strategy (or any amendment to or replacement for this document in force at the time), or for other mitigation which achieves a phosphorous neutral impact from the development;
 - (b) Provide details of the manner in which the proposed mitigation is to be secured. Details to be submitted shall include arrangements for the ongoing monitoring of any such proposals which form part of the proposed mitigation measures.

The development shall be carried out in accordance with and subject to the approved proposals.

Reason: The impacts of the proposed development must be mitigated before any development is carried out in order to ensure that there will be no adverse impacts on the River Avon Special Area of Conservation (SAC), in accordance with the Council's Phosphorus Mitigation Strategy / the Avon Nutrient Management Plan.

19. **Phase 1 Landscape Ecological Management Plan (LEMP)**

The Phase 1 Landscape and Ecological Management Plan (LEMP) (EDP, February 2024, Ref: edp5444_r033c) sets out a framework for the protection, establishment, management, maintenance and monitoring of the landscape and ecology features in Phase 1 of the development as set out in the Ecological Features Plan (EDP, 19 January 2024, Ref: edp5444_d097a). The Phase 1 LEMP is to be read and enacted upon in conjunction with the following drawings and reports:

- All approved detailed Landscape Design plans in Condition 28;
- Ecology Baseline;
- Environmental Statement (Campbell Reith) – Volume 1 Chapter 8: Ecology and Nature Conservation (December 20210)
 - i. Key features to be retained, enhanced and created should be fully addressed in line with Section 3 of the LEMP (EDP, February 2024, Ref: edp5444_r033c).
 - ii. During the construction phase of Phase 1 all habitat creation and landscaping planting should be undertaken in line with Section 4 of the LEMP (EDP, February 2024, Ref: edp5444_r033c) taking full account of the Construction Environmental Management Plan (CEMP).
 - iii. For Years 1 to 5 following commencement of Phase 1 development the site developer should fully enact the Management Objectives and Maintenance Operations set out in Table 5.1 of the LEMP (EDP, February 2024, Ref: edp5444_r033c).
 - iv. Monitoring and Timetable of Phase 1 Works should be fully undertaken in line with Section 7 of the LEMP (EDP, February 2024, Ref: edp5444_r033c).
 - v. For Years 6 to 15 following commencement of Phase 1 development the site developer should fully enact the Management and Maintenance tasks in line with Section 6 of the LEMP (EDP, February 2024, Ref: edp5444_r033c).

Reason: In the interests of the protection of landscape and ecological assets on site and their continued protection and enhancement, and to ensure that all public areas are properly managed.

20. **Phase 2 Landscape Ecological Management Plan (LEMP)**

No development shall take place on Phase 2, or the 151st residential dwelling until the Phase 1 Landscape and Ecological Management Plan (LEMP) (EDP, February 2024, Ref: edp5444_r033c) is reviewed after with any necessary changes to the protection, establishment, management, maintenance and monitoring documented within an updated LEMP which covers the residual landscape and ecological assets within the application site. The updated LEMP should be submitted and agreed in writing with the LPA prior to the commencement of works on Phase 2.

Reason: In the interests of the protection of landscape and ecological

assets on site and their continued protection and enhancement, and to ensure that all public areas are properly managed.

21. **Phase 1 Biodiversity Net Gain**

Prior to the first occupation of any Phase 1 housing unit (dwellings 1 to 150) the details of a biodiversity net gain package of on-site (supplemented if necessary off-site of BNG) in a Biodiversity Net Gain Monitoring and Management Plan covering a period of 30 years from commencement of each development phase - shall be submitted to, and approved in writing by, the LPA. This package, whether on or off site or a combination of the two, should secure the identified 10% BNG arising from the Phase 1 element of the development and include:

- i. An updated calculation of the number of biodiversity units required to provide a 10% BNG in accordance with DEFRA Biodiversity Metric Calculation July 2021 (or a metric based on the latest guidance);
- ii. If offsetting is needed the details of the BNG project including its location;
- iii. A timetable for the provision of the BNG project;
- iv. Details of the management of the BNG project;
- v. Details of the future monitoring of the BNG project in perpetuity. The BNG package as approved shall be provided prior to the occupation of the penultimate dwelling on the site and thereafter retained as such; and
- vi. Written confirmation that the required number of offsetting BNG units had been secured.

The BNG monitoring report should be produced by a suitably qualified and experienced Ecologist and shall include the following for the target habitats:

- Credentials of the ecologist undertaking the monitoring;
- Assessment of habitats against the objectives and target condition defined in the management plan / assessment;
- Habitat type, extent and condition;
- Any presence recorded of target species;
- Date stamped photos accompanied by detailed site notes on extent of growth and condition using indicators in the management plan with any other notes of interest;
- If the target species /habitat is not present, provide detailed site notes on factors that are / could hinder growth or establishment;
- Detailed specific recommendations (where appropriate) on management actions to promote growth / establishment of target species / habitats including timescales for undertaking actions and marked site plans to show the actions;
- Photographs from the fixed monitoring points detailed in the management plan using high quality images

Reason: To ensure Biodiversity Net Gain is secured as part of the development in accordance with Policies ENV3, ENV4 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside the National Park and Policies DM1, DM2 and DW-E12 of the Local Plan for the New Forest District outside the National Park (Part 2: Sites and Development Management), NFDC interim Biodiversity Guidance and the

22. Phase 2 Biodiversity Net Gain

Prior to the first occupation of any Phase 2 housing unit (dwellings 151 to 443) the details of a BNG package of on-site supplemented if necessary off-site of BNG shall be submitted to, and approved in writing by, the LPA. This package, whether on or off site or a combination of the two, should secure the identified 10% BNG arising from the Phase 2 element of the development and include:

- i. An updated calculation of the number of biodiversity units required to provide a 10% BNG in accordance with DEFRA Biodiversity Metric Calculation July 2021 (or a metric based on the latest guidance);
- ii. If offsetting is needed the details of the BNG project including its location;
- iii. A timetable for the provision of the BNG project;
- iv. Details of the management of the BNG project;
- v. Details of the future monitoring of the BNG project in perpetuity. The BNG package as approved shall be provided prior to the occupation of the penultimate dwelling on the site and thereafter retained as such.
- vi. Written confirmation that the required number of offsetting BNG units had been secured.

The BNG monitoring report should be produced by a suitably qualified and experienced Ecologist and shall include the following for the target habitats:

- Credentials of the ecologist undertaking the monitoring;
- Assessment of habitats against the objectives and target condition defined in the management plan / assessment;
- Habitat type, extent and condition;
- Any presence recorded of target species;
- Date stamped photos accompanied by detailed site notes on extent of growth and condition using indicators in the management plan with any other notes of interest;
- If the target species /habitat is not present, provide detailed site notes on factors that are / could hinder growth or establishment;
- Detailed specific recommendations (where appropriate) on management actions to promote growth / establishment of target species / habitats including timescales for undertaking actions and marked site plans to show the actions;
- Photographs from the fixed monitoring points detailed in the management plan using high quality images

Reason: To ensure Biodiversity Net Gain is secured as part of the development in accordance with Policies ENV3, ENV4 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside the National Park and Policies DM1, DM2 and DW-E12 of the Local Plan for the New Forest District outside the National Park (Part 2: Sites and Development Management), NFDC interim Biodiversity Guidance and the Environment Act 2021.

23. Phase 1 Ecological Construction Method Statement (ECMS)

No development shall take place on Phase 1 (Full application - dwellings 1 to 150), including any works of demolition and site clearance, until an Ecological Construction Method Statement (ECMS) has been submitted to, and approved in writing by, the Local Planning Authority. Thereafter the approved ECMS shall be implemented and adhered to throughout the entire Phase 1 construction period.

All Phase 1 works shall be carried out in accordance with the methodology and details set out in the Phase 1 Landscape and Ecological Management Plan (LEMP) (EDP, February 2024, Ref: edp5444_r033c) and other relevant submitted ecological documents and include the following to be submitted for approval:

- i. Method for ensuring no wildlife is trapped during construction works
- ii. Protective fencing and other arrangements during construction
- iii. Delivery of toolbox talks to all operatives
- iv. Storage of topsoil and other materials including tree protection measures
- v. Detail measures to avoid and mitigate construction impacts on species and retained habitats
- vi. Sensitive lighting during construction on sensitive ecological receptors e.g. roosts, bat flight lines, retained vegetation etc.

Reason: To comply with Local Plan policies STR1 and ENV3 and in the interests of the protection of ecological assets on site and their continued protection and enhancement in accordance with Local Plan policies STR1, ENV3 and DM2.

24. Phase 2 Ecological Construction Method Statement (ECMS)

No development shall take place on Phase 2 (Outline - dwellings 151 to 443), including any works of demolition and site clearance, until an updated Phase 2 Ecological Construction Method Statement (ECMS) has been submitted to, and approved in writing by, the Local Planning Authority. Thereafter the approved ECMS shall be implemented and adhered to throughout the entire Phase 2 construction period.

All Phase 2 works shall be carried out in accordance with the methodology and details set out in a Phase 2 Landscape and Ecological Management Plan (LEMP) (as per Condition 23) and include the following to be submitted for approval:

- i. Method for ensuring no wildlife is trapped during construction works;
- ii. Protective fencing and other arrangements during construction;
- iii. Delivery of toolbox talks to all operatives;
- iv. Storage of topsoil and other materials including tree protection measures;
- v. Detail measures to avoid and mitigate construction impacts on species and retained habitats; and
- vi. Sensitive lighting during construction on sensitive ecological receptors e.g. roosts, bat flight lines, retained vegetation etc.

New supplementary ecological desk study and site surveys shall be undertaken as necessary to inform the preparation and implementation of

Phase 2 ecological mitigation measures to be set out in the Phase 2 ECMS in line with the CIEEM April 2019 Advice Note on the lifespan of ecological reports. The supplementary surveys shall be of an appropriate type and survey methods shall follow national good practice guidelines.

Reason: To comply with Local Plan policies STR1 and ENV3 and in the interests of the protection of ecological assets on site and their continued protection and enhancement in accordance with Local Plan policies STR1, ENV3 and DM2.

25. **Phase 1 Wildlife enhancements**

Prior to commencement of development a detailed scheme including site plans showing the exact location of each feature for the placement of the wildlife enhancements set out in Section 3 (Key Features to be Retained, Enhanced and Created) (Paragraphs 3.38 to 3.57) of the Phase 1 Landscape and Ecological Management Plan (LEMP) (EDP, February 2024, Ref: edp5444_r033c). This includes the installation of:

- i. 150 swift boxes (finish to match that of the building if integrated) in line with the guidance set out in Paragraph 3.40 of the LEMP;
- ii. 150 bat boxes in line with the guidance set out in Paragraph 3.44 of the LEMP;
- iii. Holes in garden boundary fences of a minimum of 120mm x 120mm between garden boundary fences to be achieved through the installation of hedgehog friendly gravel boards or by alteration of standard gravel boards;
- iv. Four hibernacula will be created: two within the site and two within the ANRG Land. The design of the hibernacula will broadly follow that provided in the Design Manual for Roads and Bridges and the Reptile Habitat Management Handbook (as footnoted in Paragraph 3.50 of the LEMP).
- v. Four invertebrate towers within the Phase 1 site.

Reason: To ensure that biodiversity enhancement measures are delivered throughout the development; and to ensure that a key aspect of sustainability is delivered in accordance with Local Plan policies DM2 and ENV 3.

26. **Bats and Lighting**

No development shall take place until a Phase 1 site wide sensitive lighting design strategy for biodiversity” in line with BCT / ILP Guidance Note 08/23 ‘Bats and artificial lighting at night’ for all areas to be lit shall be submitted to and approved in writing by the local planning authority. The strategy shall:

- a) Identify those areas/features on site that are particularly sensitive for bats and that are likely to cause disturbance in or around their breeding sites and resting places or along important commuting routes used to access key areas of their territory, for example, for foraging;
- b) Identify and take account dedicated bat roost features provided by the development; and

- c) Show how and where external lighting will be installed (through the provision of appropriate lighting contour (lux) plans and technical specifications) so that it can be clearly demonstrated that areas to be lit will not disturb or prevent the above species using their territory or having access to their breeding sites and resting places and that dark corridors will be maintained.

All external lighting shall be installed in accordance with the specifications and locations set out in the strategy, and these shall be maintained thereafter in accordance with the strategy. Under no circumstances should any other external lighting be installed without prior consent from the LPA.

Reason: To ensure that biodiversity enhancement measures are delivered throughout the development; and to ensure that a key aspect of sustainability is delivered in accordance with Local Plan policies DM2 and ENV 3.

27. **Badgers**

Prior to the commencement of any construction work on the application site (Phase a and Phase 2), an updated Badger Survey shall be undertaken by a suitably qualified and experienced ecologist, and a Method Statement for Badgers during Construction shall be submitted to the Local Planning Authority for written approval. The development shall be carried out in full accordance with the approved Method Statement.

Reason: To ensure that biodiversity enhancement measures are delivered throughout the development; and to ensure that a key aspect of sustainability is delivered in accordance with Local Plan policies DM2 and ENV 3.

28. **Phase 1 Hard and Soft Landscaping Detailed Design**

Before development commences a scheme of detailed hard and soft landscaping plans for Phase 1 shall be submitted for approval in writing by the Local Planning Authority. This scheme shall include:

- i. A schedule and plan of the existing trees and shrubs which have been agreed to be retained.
- ii. A schedule and specification for new tree planting (species, size, spacing, location, details of irrigation pipe) for the proposed Phase 1 public open space including informal open space, alternative natural recreational greenspace, areas with open surface water drainage features (within and without the ANRG) and play areas.
- iii. A schedule and specification for new soft planting (hedgerow, shrub, turf, lawns, bulbs and meadow) in terms of species, size, spacing and location for the proposed Phase 1 public open space including informal open space, alternative natural recreational greenspace, areas with open surface water drainage features (within and without the ANRG) and play areas.
- iv. A schedule and specification for new tree planting (species, size,

spacing, location, details of irrigation pipe) for the public realm in the proposed Phase 1 housing area and a plan showing how adequate rooting volumes for each tree proposed within the housing area will be achieved and indicating the location and extent of any structural tree soil, crate systems and root barriers.

- v. A schedule and specification for all new soft planting (species, size, spacing, location) for the public realm in the proposed Phase 1 housing area.
- vi. A schedule and specification of all hard landscaping and means of enclosure, including those proposed to prevent anti-social vehicular parking, in Phase 1 for all public open space and public realm.
- vii. A schedule and specification of all hard and soft landscaping in the rear gardens of all dwellings in Phase 1.
- viii. A specification of the proposed bollard located in the centre of the emergency access in the south-west corner of Phase 1.
- ix. A specification for the protection of all new soft landscape planting in Phase 1 (e.g., temporary fences, rabbit guards, mulching).
- x. A schedule and specification of ANRG interpretation boards relating to relevant ecological interests and a separate reptile hibernacula information board relating to the northern part of the Phase 1 ANRG.
- xi. A schedule and specification of all Phase 1 benches, fencing, hibernacula, rock/boulders, feature logs and wooden direction posts.
- xii. All public bins within Phase 1 shall be wooden combined litter/dog waste such as Wybone or similar as agreed with the Local Planning Authority and attached to a suitable concrete base.

All Phase 1 soft landscaping (trees and shrubs) proposals hereby approved under this condition shall be carried out no later than during the first planting season following the date when the development hereby permitted is ready for occupation or in accordance with a programme agreed in writing with the Local Planning Authority. All planted materials shall be maintained for at least five years and any trees or plants removed, dying, being severely damaged or becoming seriously diseased within five years of planting shall be replaced with others of similar size and species to those originally required to be planted.

No development shall take place unless these details have been approved and then only in accordance with those details.

Reason: To ensure that the development provides a suitable soft and hard landscaping strategy and arboricultural strategy and to comply with Local Plan Policies ENV3 and ENV4.

29. **Phase 1 LEAP and NEAP play areas**

The Phase 1 LEAP and NEAP play areas shall be implemented strictly in accordance with the approved plans (Phase 1: Detailed NEAP Play Design, edp 5444_d067j, 16 May 2024 and Phase 1: Detailed LEAP Play Design, edp 5444_d099c, 16 May 2024).

The LEAP shall be completed, subject to suitable safety certification by suitably qualified third-party inspector and made available for use prior to the 1st Phase 1 residential dwelling being occupied.

The NEAP shall be completed, subject to suitable safety certification by suitably qualified third-party inspector and made available for use prior to the 25th Phase 1 residential dwelling being occupied.

All play equipment and street furniture, and other facilities in connection with the use of the LEAP and NEAP play areas shall be kept available for the public use in perpetuity and managed in accordance with the details agreed in the allied s106 planning obligation.

Reason: To ensure that the Phase 1 development provides a suitable set of safe play spaces for the local community.

30. Materials and final drawings for dwellings - Phase 1

Prior to the commencement of any works above slab level of any of the dwellings hereby permitted in Phase 1 (Full application) a full final elevation and floor plan for each dwelling type including all materials (manufacturer names, type and colour) to be used on all dwellings, garages and car barns i.e. facing bricks, wall renders, weatherboarding, tile hanging including finish and colours, joinery details, roofing materials, eaves boards, ridge tiles, solar and photovoltaic panels or other renewable energy measures including the finish colour of the EV charging box to be used on individual plots, together with the materials and colour of rainwater goods, soil and vent pipes, meter boxes including their intended finish, shall be submitted to and agreed in writing with the LPA. The development shall be completed in accordance with the details as may be agreed.

Reason: In the interests of the appearance and character of the development and to comply with New Forest Local Plan policy ENV3

31. Archaeology

No demolition and/or development shall take place within the application site boundary (Phases 1 and 2) as set out in the Site Location Plan, Pegasus, 18/1/2024, P21-1078-DE-003-0100 Rev. A until a programme of archaeological work has been secured, including a Written Scheme of Investigation has been submitted to and approved by the local planning authority in writing. The scheme shall include an assessment of significance and research questions; and:

- i. The programme and methodology of site investigation and recording;
- ii. The programme for post investigation assessment;
- iii. Provision to be made for analysis of the site investigation and recording;

- iv. Provision to be made for publication and dissemination of the analysis and records of the site investigation;
- v. Provision to be made for archive deposition of the analysis and records of the site investigation; and
- vi. Nomination of a competent person or persons/organisation to undertake the works set out within the Written Scheme of Investigation

No demolition and/or development shall take place other than in accordance with the approved Written Scheme of Investigation.

The development shall not be occupied until the site investigation and post investigation assessment has been completed in accordance with the programme set out in the Written Scheme of Investigation approved and the provision made for analysis, publication and dissemination of results and archive deposition has been secured and agreed in writing by the Local Planning Authority.

Further archaeological work may be required subject to the findings of the evaluation.

Reason: To ensure that archaeological remains and features are suitably protected and recorded in accordance with Local Plan Part Two 2014 Policy DM1.

32. **Heritage Assets**

Before highways works relating to the junction of Moortown Lane and Christchurch Road commences a scheme for the protection of the listed milestone shall be submitted to and approved in writing by the Local Planning Authority. Such protection shall be erected prior to any other site operation and at least 24 hours notice shall be given to the Local Planning Authority that it has been erected. The monument protection measures installed shall be maintained and retained for the full duration of the works or until such time as agreed in writing with the Local Planning Authority.

Reason: To ensure the protection of the listed milestone and avoidance of damage during the highways works phase in accordance with Policies ENV3 and DM1 of the Local Plan 2016-2036.

33. **Minerals safeguarding**

No development shall take place, excluding site clearance, enabling and demolition works, until a method statement covering the following matters has first been submitted to and approved in writing by the Local Planning Authority.

- i. A method for ensuring that minerals that can be viably recovered during the development operations are recovered and put to beneficial use; and
- ii. A method to record the quantity of recovered mineral (re-use on-site or off-site) and to report this data to the MPA upon completion of the development.

The development shall be carried out in accordance with the method

statement so agreed.

Reason: To ensure that any minerals found on the site can be re-used in accordance with New Forest Local Plan Part One 2020 Policy STR9

34. **Phase 1: Noise**

A full stage 2 Acoustic Design Statement (ADS) including the four key elements in accordance with ProPG: Planning and Noise shall be submitted to ensure that internal and external noise levels for the residential accommodation in Phase 1 shall not exceed the designated minimum standards stated. The scheme shall be approved in writing by the Local Planning Authority prior to the first residential occupation on Phase 1 and the approved scheme shall be implemented, maintained and retained.

Reason: In the interests of the amenities of occupiers.

35. **Phase 2: Noise**

At reserved matters stage, a full stage 2 Acoustic Design Statement (ADS) including the four key elements in accordance with ProPG: Planning and Noise shall be submitted to ensure that internal and external noise levels for the residential accommodation shall not exceed the designated minimum standards stated. The scheme shall be approved in writing by the Local Planning Authority prior to the first residential occupation on Phase 2 and the approved scheme shall be implemented, maintained and retained.

Reason: In the interests of the amenities of occupiers.

36. **Construction Environmental Management Plan (CEMP)**

No development shall take place, including any works of demolition, until a Construction Management Plan (CEMP) has been submitted to, and approved in writing by, the Local Planning Authority. Thereafter, the approved Plan shall be implemented and adhered to throughout the entire construction period. The Plan shall provide details as appropriate but not necessarily be restricted to the following matters:

- a) An indicative programme for carrying out of the works;
- b) Details of the arrangements for public engagement / consultation both prior to and continued liaison during the construction works;
- c) Measures to minimise the noise (including vibration) generated by the construction process to include hours of work, proposed method of piling for foundations, the careful selection of plant and machinery and use of noise mitigation barrier(s);
- d) Details of any floodlighting, including location, height, type and direction of light sources and intensity of illumination;
- e) The parking of vehicles of site operatives and visitors;
- f) Loading and unloading of plant and materials, including permitted times for deliveries;

- g) Storage of plant and materials used in constructing the development;

- h) The erection and maintenance of security hoarding including decorative displays and facilities for public viewing, where appropriate;
- i) The provision of wheel washing facilities and other works required to mitigate the impact of construction upon the public highway (including the provision of temporary Traffic Regulations Orders);
- j) Measures to control the emission of dust and dirt during construction;
- k) A scheme for recycling / disposing of waste resulting from demolition and construction works i.e. no burning permitted.

Reason: To ensure that construction works are not harmful to existing local residents who may be affected during the works and to comply with Local Plan policy CCC1

37. Removal of Permitted Development Rights Plots 1 to 14 (Phase 1)

Notwithstanding the provisions of the Town and Country Planning (General Permitted Development) Order 2015 as amended (or any revocation, amendment or re-enactment of that Order) no extension (or alterations) otherwise approved by Classes AA, A, B or C of Part 1 of Schedule 2 to the Order, garage or other outbuilding otherwise approved by Class E of Part 1 of Schedule 2 to the Order, or means of enclosure otherwise approved by Class A of Part 2 of Schedule 2 to the Order shall be erected or carried out on Plots 1, 2, 3, 4, 5, 6, 7, 8,9, 10, 11 and 12 of Phase 1 without express planning permission first having been granted.

Reason: In view of the Phase 1 layout of the development the Local Planning Authority would wish to ensure that any future development proposals do not adversely affect the amenities of the occupiers of the existing neighbouring properties to the west contrary to Local Plan Policy ENV3 criterion (ii).

38. Construction: Hours of Operation

Unless otherwise approved in writing by the Local Planning Authority, all works and ancillary operations in connection with the construction of the development, including the use of any equipment or deliveries to the site, shall be carried out only between 0800 hours and 1830 hours on Mondays to Fridays and between 0800 hours and 1300 hours on Saturdays and at no time on Sundays, Bank Holidays or Public Holidays, unless in the case of any emergency works that may be required urgently.

Reason: To safeguard residential amenities.

39. Unless otherwise agreed by the Local Planning Authority, development other than that required to be carried out as part of an approved scheme of remediation must not commence until conditions relating to contamination no 41 to 43 have been complied with.

If unexpected contamination is found after development has begun, development must be halted on that part of the site affected by the

unexpected contamination to the extent specified by the Local Planning Authority in writing until condition 44 relating to the reporting of unexpected contamination has been complied with in relation to that contamination.

Reason: To ensure that risks from land contamination to the future users of the land and neighbouring land are minimised, together with those to controlled waters, property and ecological systems, and to ensure that the development can be carried out safely without unacceptable risks to workers, neighbours and other offsite receptors in accordance with Policy CCC1 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park and Policy DM5 of the Local Plan For the New Forest District outside the National Park. (Part 2: Sites and Development Management).

40. An investigation and risk assessment, in addition to any assessment provided with the planning application, must be completed in accordance with a scheme to assess the nature and extent of any contamination on the site, whether or not it originates on the site. The contents of the scheme are subject to the approval in writing of the Local Planning Authority. The investigation and risk assessment must be undertaken by competent persons and a written report of the findings must be produced. The written report is subject to the approval in writing of the Local Planning Authority. The report of the findings must include:

(i) a survey of the extent, scale and nature of contamination;

(ii) an assessment of the potential risks to:

- human health,
- property (existing or proposed) including buildings, crops, livestock, pets, woodland and service lines and pipes,
- adjoining land,
- groundwaters and surface waters,
- ecological systems,
- archaeological sites and ancient monuments;

(iii) an appraisal of remedial options, and proposal of the preferred option(s).

This must be conducted in accordance with the Environment Agency's technical guidance, Land Contamination Risk Management (LCRM).

Reason: To ensure that risks from land contamination to the future users of the land and neighbouring land are minimised, together with those to controlled waters, property and ecological systems, and to ensure that the development can be carried out safely without unacceptable risks to workers, neighbours and other offsite receptors in accordance with Policy CCC1 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park and Policy DM5 of the Local Plan for the New Forest District outside the National Park. (Part 2: Sites and Development Management).

41. Where contamination has been identified, a detailed remediation scheme to bring the site to a condition suitable for the intended use by removing unacceptable risks to human health, buildings and other property and the natural and historical environment must be prepared, and is subject to the approval in writing of the Local Planning Authority. The scheme must include all works to be undertaken, proposed remediation objectives and remediation criteria, timetable of works and site management procedures. The scheme must ensure that the site will not qualify as contaminated land under Part 2A of the Environmental Protection Act 1990 in relation to the intended use of the land after remediation.

Reason: To ensure that risks from land contamination to the future users of the land and neighbouring land are minimised, together with those to controlled waters, property and ecological systems, and to ensure that the development can be carried out safely without unacceptable risks to workers, neighbours and other offsite receptors in accordance with Policy CCC1 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside the National Park and Policy DM5 of the Local Plan for the New Forest District outside the National Park. (Part 2: Sites and Development Management).

42. Where a remediation scheme has been approved in accordance with condition 42, the approved remediation scheme must be carried out in accordance with its terms prior to the commencement of development other than that required to carry out remediation, unless otherwise agreed in writing by the Local Planning Authority. The Local Planning Authority must be given two weeks written notification of commencement of the remediation scheme works. Following completion of measures identified in the approved remediation scheme, a verification report that demonstrates the effectiveness of the remediation carried out must be produced, and is subject to the approval in writing of the Local Planning Authority.

Reason: To ensure that risks from land contamination to the future users of the land and neighbouring land are minimised, together with those to controlled waters, property and ecological systems, and to ensure that the development can be carried out safely without unacceptable risks to workers, neighbours and other offsite receptors in accordance with Policy CCC1 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside the National Park and Policy DM5 of the Local Plan for the New Forest District outside the National Park. (Part 2: Sites and Development Management).

43. In the event that contamination is found at any time when carrying out the approved development that was not previously identified it must be reported in writing immediately to the Local Planning Authority. An investigation and risk assessment must be undertaken in accordance with the requirements of condition 41, and where remediation is necessary a remediation scheme must be prepared in accordance with the requirements of condition 42, which is subject to the approval in writing of the Local Planning Authority. Following completion of measures identified in the approved remediation scheme a verification report must be prepared, which is subject to the approval in writing of the Local Planning Authority in accordance with condition 42.

Reason: To ensure that risks from land contamination to the future users of the land and neighbouring land are minimised, together with those to controlled waters, property and ecological systems, and to ensure that the development can be carried out safely without unacceptable risks to workers, neighbours and other offsite receptors in accordance with Policy CCC1 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside the National Park and Policy DM5 of the Local Plan for the New Forest District outside the National Park. (Part 2: Sites and Development Management).

44. **High Speed Fibre Broadband**

Prior to the occupation of each dwelling in the development hereby approved, the necessary infrastructure required to enable high speed fibre broadband connections shall be provided within the site up to property thresholds, unless otherwise agreed in writing with the Local Planning Authority.

Reason: In accordance with Local Plan Policy IMPL2: Development Standards criterion (v).

45. **Reptile Mitigation**

The development, including mitigation, shall be carried out in full accordance with the approved Reptile Mitigation Strategy (edp, January 2024, (Ref: edp 5444_r031e) and the Reptile Displacement Area and Reptile Enhancement Area plan (edp, 19 January 2024, edp 5444_d094d).

Reason: To ensure that biodiversity enhancement measures are delivered throughout the development; and to ensure that a key aspect of sustainability is delivered in accordance with Local Plan policies DM2 and ENV 3.

46. **Retained Trees**

The trees/hedges on the site which are shown to be retained on the approved plans shall be protected during all site clearance, demolition and building works in accordance with the measures set out in the submitted arboricultural statement.

Reason: To safeguard trees and natural features which are important to the visual amenities of the area.

47. **New Trees**

After the planting of all new trees on site as illustrated within the Detailed Landscape Design Plans and submitted tree planting schedule to be agreed under Condition 29 (Phase 1 Hard and Soft Landscaping Detailed Design), notice shall be given to the Local Planning Authority Tree Officer to inspect the trees. If it is found that the planting is not in accordance with the aforementioned documents, further works and/or replacement planting will

be undertaken and agreed with Local Planning Authority Tree Officer until correct.

Reason: To safeguard trees and natural features which are important to the visual amenities of the area.

48. **Replacement Trees**

If within a period of 5 years from the date of planting the trees (or any other tree planted in replacement for it) is removed, uprooted, destroyed or dies, another tree of the same size and species shall be planted in the same place or in accordance with a variation for which the Local Authority give their written consent.

Reason: To safeguard trees and natural features which are important to the visual amenities of the area.

49. **Rear Garden Gates (Phase 1)**

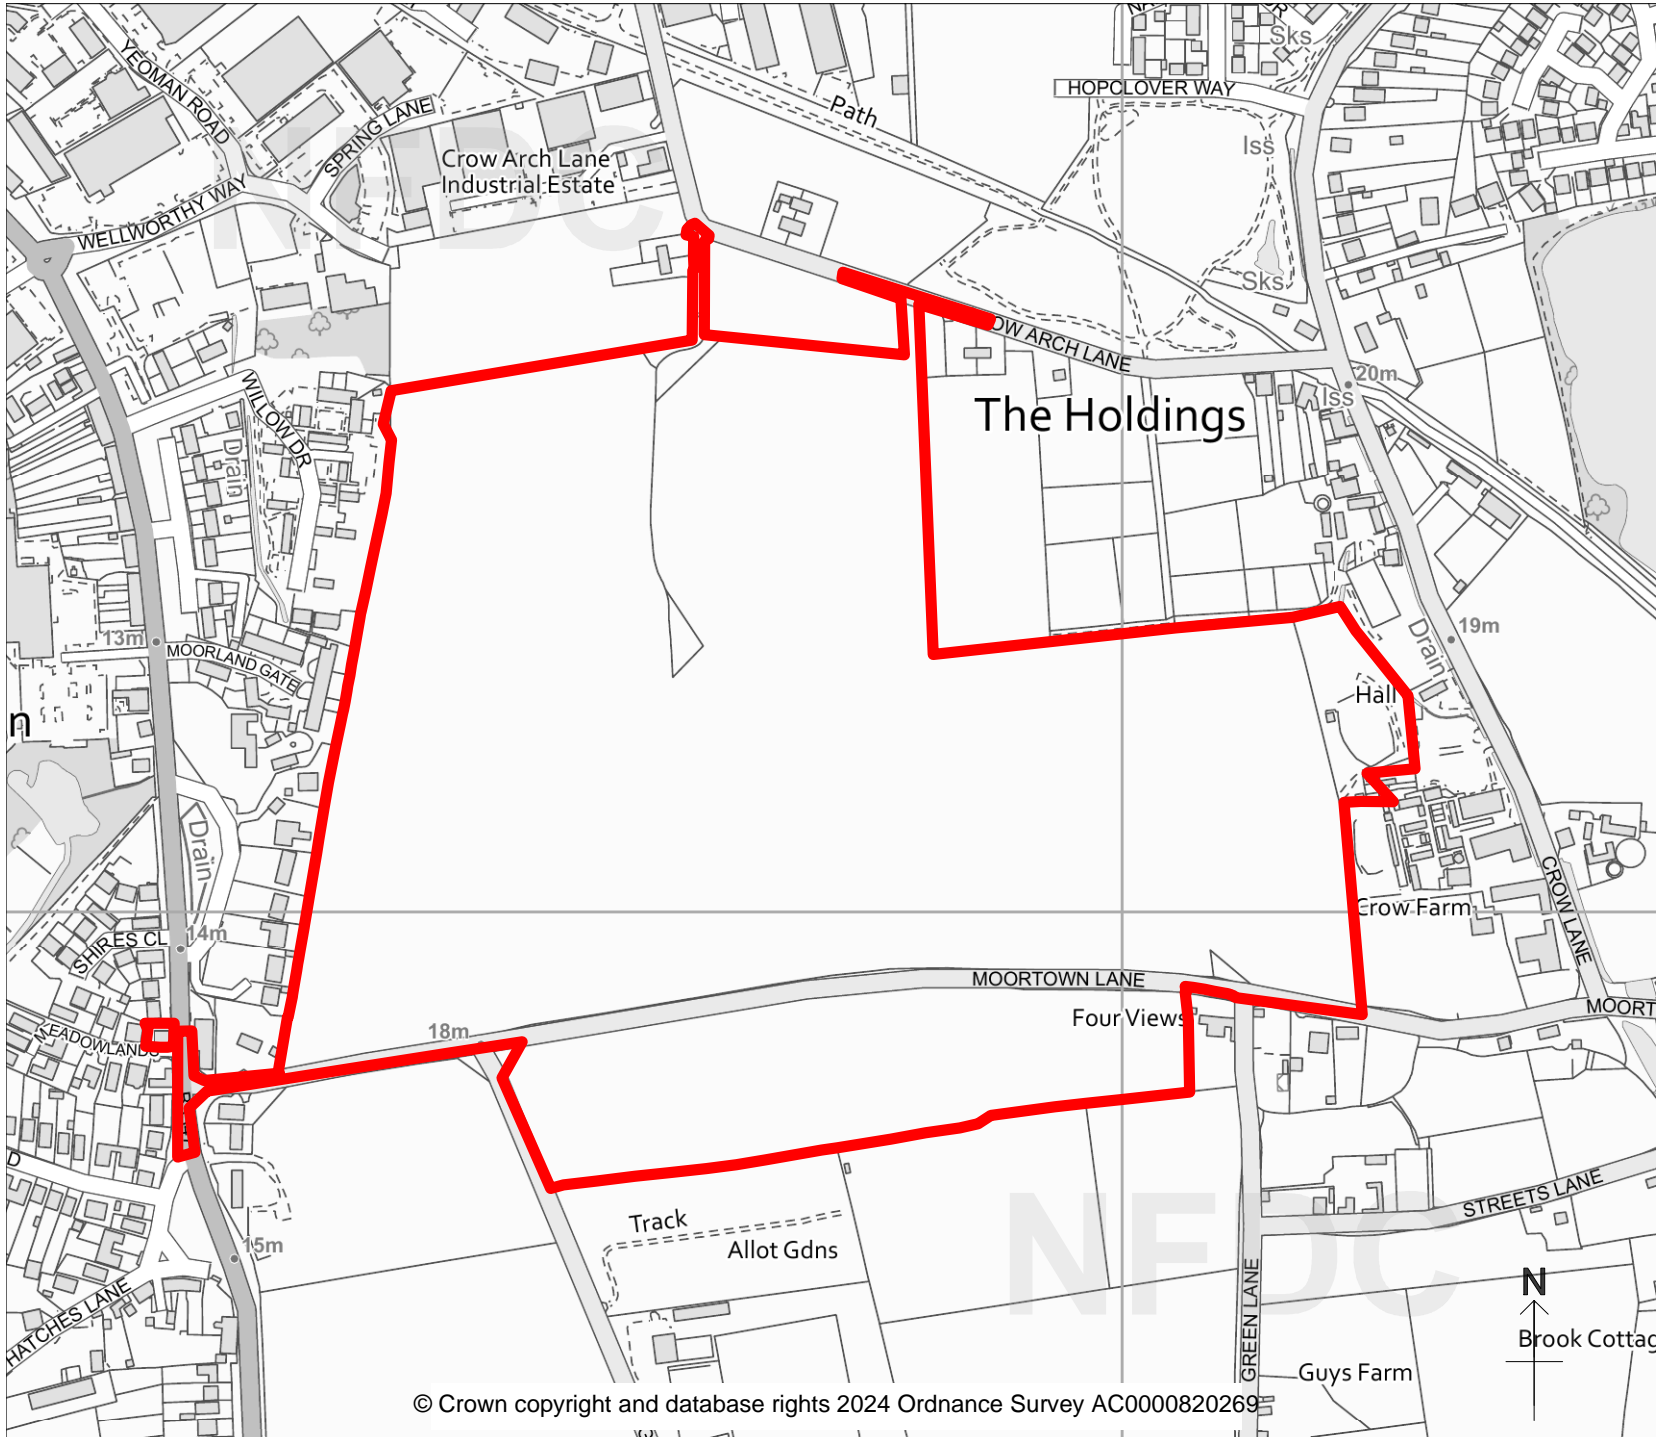

The residential dwellings in Phase 1 Plots 16, 17, 18, 19, 53, 54, 59, 60, 61, 63, 64, 65, 67, 84, 85, 101, 102, 108, 109, 110, 116 and 117 as set out in the Phase 1 Masterplan (Pegasus, 27/3/2024, Ref: P21-1078-DE-003-0101-C) hereby permitted shall not be occupied until the rear or side access gate has been fitted with a suitable key operated lock that operate from both sides of the gate.

Reason: To satisfy National Planning Policy Framework Paragraph 135 criterion (f).

PLANNING COMMITTEE

September 2024

SS13 - Land Off Moortown Lane
 Ringwood

21/11723

Scale 1:5000

N.B. If printing this plan from the internet, it will not be to scale.

Planning Committee 11 September 2024

Application Number: 23/10707 Full Planning Permission
Site: OPEN SPACE ADJACENT TO CROW LANE
(PROPOSED LEGAL AGREEMENT)
Development: The change of use of agricultural land to publicly accessible open space to facilitate Alternative Natural Recreational Green Space ('ANRG'), with associated landscaping, footways and access points
Applicant: Crest Nicholson South
Agent: Savills
Target Date: 10/11/2023
Case Officer: Robert Thain
Officer Recommendation: Service Manager - Grant
Reason for Referral to Committee: Contrary to Town Council view.

1 SUMMARY OF THE MAIN ISSUES

The key issues are:

1. Principle of Development
2. Ecology
3. Landscape and Trees
4. Flood Risk and Drainage
5. Other Matters
6. Planning Balance and Conclusions.

2 SITE DESCRIPTION

The application site is situated to the south-east of Ringwood in open countryside located between Crow Lane to the west and the Castleman Trail and Hightown Lake to the west. To the north is a detached dwelling with a large outbuilding in a large plot. To the south is a dwelling, several outbuildings with paddocks. Beyond the site is Ringwood to the north and west and the New Forest National Park to south and east. The application site abuts the New Forest National Park Authority boundary to the south-east.

The application site is broadly trapezoidal in shape and generally flat. The site is currently open greenfield land comprising arable farmland and has a size of approximately 2.51 hectares. The perimeter boundaries of the are comprised of hedgerow of mixed native species which curtail some views into the site from the adjoining public highways. There are two trees with preservation order on the site boundary: one on the boundary with Crow Lane and one on the southern boundary. There are no existing buildings or structures within the application site.

There are no statutory designated sites for nature conservation on the Site. The closest statutory nature conservation sites are the Avon Valley RAMSAR, SPA and

Site of Special Scientific Interest (SSSI) located approximately 868.5 metres to the west (at its closest point to the Site) and the New Forest SAC, SPA and Ramsar site located 1.7 kilometres east (at its closest point to the Site).

3 PROPOSED DEVELOPMENT

The application seeks planning permission for the Change of Use of land to publicly accessible open space to facilitate both Alternative Natural Recreational Green Space ('ANRG') and informal open space, with associated landscaping, footways and access points. The proposal will provide two points of non-vehicular access from the Castleman Trail to the north and a looped 2m footpath around the interior of the open space. The size of the proposed public open space is 2.45ha of which 1.33ha is ANRG and 1.12ha is informal open space.

The proposed landscaping includes species-rich grass meadow, new tree planting, flowering lawn and new native shrub planting. A series of swales created along the development periphery will be primarily covered with a species-rich meadow mix sowed to the banks. Informal pockets of planting will be included along the banks of the swales with the aim of enhancing ecology. The base of the swales will include a gravel trench.

The proposal will include a dog agility area but does not include dedicated children's play areas and equipment. The proposal also includes some benches and picnic benches. In the south-east corner of the application site, the existing timber footbridge is proposed to be replaced with a new GRP footbridge with approximate dimensions of 1.5m width, 3m span and two-rail parapets.

4 PLANNING HISTORY

No known planning applications within the application site.

The application reference 21/11723 Land at Moortown Lane, Ringwood (Local Plan Strategic Site 13) is linked to this proposal. That proposal is for the residential-led mixed-use development of part of the Local Plan Allocation Site 13: Land at Moortown Lane, Ringwood. The proposal is submitted as a hybrid planning application with planning permission sought for the following:

- Outline planning permission for the erection of 293 dwellings (C3) with all matters reserved except access; and
- Full planning permission for the erection of 150 dwellings with associated parking, ANRG, open space, landscaping and sustainable drainage systems (SuDS), alongside the creation of a vehicular junction with Moortown Lane, primary and secondary road infrastructure, creation of public footway and offsite highways improvements.

- Ringwood Town Access Plan (March 2011)
- Ringwood Local Distinctiveness (July 2013)

Neighbourhood Plan

The Ringwood Neighbourhood Development Plan (RNP) was adopted by NFDC on 8 July 2024. A report was taken to NFDC Cabinet on 1 May 2024 which sought approval for the modifications recommended by the Examiner of the Ringwood Neighbourhood Development Plan and agreement that the Neighbourhood Development Plan can proceed to a local referendum. The referendum was held on 4 July 2024. The local Ringwood community was asked whether they supported the Neighbourhood Plan, in a referendum on 4 July 2024. A majority (83.2%) of those voting in the referendum voted in favour of the Plan (on a turnout of 58.9%).

In accordance with the Neighbourhood Planning (General) Regulations 2012 (as amended), the Ringwood Neighbourhood Plan was 'made' (adopted) by New Forest District Council on 8 July 2024. Now made, the Neighbourhood Plan forms part of the statutory development plan for Ringwood parish within New Forest District Council area.

There are eleven policies within the adopted Ringwood Neighbourhood Development Plan (listed below):

- R1: A Spatial Plan for Ringwood
- R2: Maintaining a Successful and Prosperous Town Centre
- R3: Making Better Use of Opportunity Areas in the Town Centre
- R4: Shops and Parades Within and Outside Defined Local Centres
- R5: Smaller Housing
- R6: First Homes
- R7: The Ringwood Design Code

- R8: Building for a Healthy Life
- R9: Creating a Green Infrastructure and Nature Recovery Network
- R10: Zero Carbon Buildings
- R11: Encouraging Active and Healthy Travel

The adopted Ringwood Neighbourhood Development Plan also includes several appendices. Appendix A (Ringwood Strategic Masterplan) relates only to Policy R3 and the town centre. Appendix B (Ringwood Design Guidance and Code, November 2022) seeks to amplify Policy R7 and hence there is a duty to have regard to these documents in line with the NFDC May 2024 Cabinet Report. Reference has been made to Appendix B in the Planning Assessment where relevant. Appendix C is the NFDC Local Distinctiveness SPD and hence is already a material consideration.

6 PARISH / TOWN COUNCIL COMMENTS

Ringwood Town Council

July 2024

There is a disconnect here between the two applications that fall to be considered. Application 21/11723 is only (arguably) compliant with policies requiring ANRG etc if application 23/10707 is also granted. Conversely, 23/10707 only becomes necessary if 21/11723 is granted. 23/10707 is also lacking in significant respects – for example: The new survey is out of date; The plan does not secure the use “in perpetuity” (which somewhat contradictorily is defined as 90 years!); The location of the site “does not relieve pressure from (on) the NFNP but in fact does the opposite”; “Overall, it is considered that the creation of the proposed ANRG.... would be detrimental to the setting of the NFNP and its landscape character”; “This parcel of land does not meet the criteria for Alternative Natural Recreational Greenspace as set out in Policy ENV1 para 4.ii.a.....” “The layout submitted does not have sufficient features of interest to provide an incentive to visit for any length of time”.

The NFNP “has set out that the creation of the ANRG with its introduction of suburban style features to satisfy its recreational purpose, would be detrimental to the setting of the NFNP and its landscape character”. The Officer’s Report also accepts that in terms of the Mitigation SPD (paragraph A4.1.13: “The proposal has not met one of the criteria (but has met the other criteria. Hence, when addressing the guidance in A4.1.3 an on-balance decision could be made”. It is RTC’s strong view that the “on-balance” decision is that the application should be refused as being non-compliant with policy.

February 2024.

Ringwood Town Council recommends Refusal (4) (updated comments agreed by Full Council 28 February 2024). The application is contrived. It is an artificial device to increase the number of houses and housing density within Strategic Site 13 (SS13). Loss of Green Belt and Agricultural Land. The development is inappropriate and would lead to a loss of Green Belt and further loss of agricultural land, in addition to that already allocated for SS13.

Road Safety

The proposed location of the crossing in Crow Lane is not safe. Although on paper

the road appears to be fairly straight, there is a curve in the road and visibility for and of pedestrians would be compromised. The creation of an access to Crow Lane at this point would encourage pedestrians/cyclists to take this route to walk/cycle to Crow Farm Shop; a route that would not be safe without improvements unlikely to be achievable in this narrow road.

The road regularly floods at this location, meaning access to the site would be compromised at certain times of the year (Note: photograph of flooding in Crow Lane included in representation).

Flood Risk

There is considerable concern about the impact the proposal would have on an area already susceptible to flooding.

Crow Lane regularly floods after heavy rainfall and is impassable as a result at least twice a year. The photograph below shows flood water running into the application site and at the proposed location of the road crossing and access into the site.

The proposed site adjoins Crow Stream on the east side where it too bursts its banks a few times a year with implications for site drainage. It is important to ensure that no more water goes into the Stream as it cannot cope. Ringwood Town Council and its Flood Wardens have a great deal of knowledge regarding the flooding and drainage in this area, having undertaken works to re-gravel and widen Crow Stream (downstream of the application site), and keeping it regularly maintained, to reduce the frequency and severity of flooding in the area.

It is highly probable that the developers do not understand the dynamics of the local drainage relevant to the site development. They need to take a catchment view of the system in order to understand the causes of existing flooding to address the issue through mitigation so that the situation is not worsened.

Specific issues with regard to the application are as follow:

- We need to be sure the infiltration tests are made in February when the water table is highest. Under SUDS rules the bottom of the drainage cages need to be at least a metre above the ground water level. Evidence shows that, in the flood season, this might be difficult to achieve.
- Gentle releveling of the site” is proposed by the applicant to effect satisfactory drainage. Additional detail is required to assess any unintended consequences.
- The red line on the plans includes the stream to the south of the site. We would like to understand what is proposed here.
- We need assurance that no extra water will get into the Crow Stream as a result of the proposed development.
- Crow Stream to the south-east of the site breaks its banks a few times a year. This will have implications for development in this corner of the site. For example, the footpaths would become impassable.
- The consequences of the backflow from the Crow Stream into the Crow Lane Ditch (which runs alongside Crow Lane) need to be understood and considered. In flooding events, the water in the Crow Stream at Streets Lane is 2 or 3 feet higher than the pipes on the north side of the wetland which drains the Crow Lane Ditch. The stream water therefore has always backed up into the Crow Lane Ditch. As it is, during flooding events, water will still back up from the Crow Stream into the Crow Lane Ditch which will then always flood. Several remedial actions have been identified to stop the backflow, including removing some flow restrictions in the Crow Lane Ditch.

Should permission be granted, this is an opportunity for those measures to be implemented.

- The Council would appreciate the opportunity to meet with developers to share local knowledge and discuss these concerns.

Should permission be granted, an enforceable condition (financial penalty?) should be imposed to ensure all the agreed flood mitigation measures are implemented prior to completion of the development of SS13.

Rights of Way

The Council notes the updated response from HCC Countryside Service and supports the proposed improvements to Footpath 45 and the Castleman Trailway, as well as the replacement footbridge on Footpath 41a.

Biodiversity

No biodiversity study has been provided with the application – this should be requested.

Viability

It is noted that a Financial Viability Assessment has already been submitted by the applicant in relation to 21/11723. There are concerns the additional costs to create this ANRG will impact further on the proposed development and affordable housing provision.

7 COUNCILLOR COMMENTS

No comments received

8 CONSULTEE COMMENTS

Comments have been received from the following consultees:

Natural England

No objection subject to appropriate mitigation being secured.

ANRG Layout

The area of Area of Natural Recreational Greenspace (ANRG) which is a total of 2.51 ha will provided mitigation to the planning application (23/11732) which is connected to the site via a 3 m wide footpath/ cycle lane.

A detailed Landscape Ecological Management Plan detailing habitat creation, seed mixes and management has been submitted to support the application is recommended to accompany the Landscape strategy drawing (Environmental Dimension Partnership LTD) to fall in line with Appendix 4 of the SPD.

However, the LEMP only include management up to 10 years, however ANRG is required to managed and monitored for 90 years.

On review of the proposed plans for the area of ANRG, Natural England raise the following points for consideration:

- The amenity grassland provides good opportunities to exercise dogs off the lead

along with recreation sport activities. These areas are recommended to feature dog bins and benches. The area of grassland could be enhanced with permanent dog agility equipment to encourage and make the area more attractive to dog walkers.

- Dog bins and litter bins to be located at the entrance and road access points.
- Seats and benches provided at an average of the one, two person seat for every 50 new resident.
- Interpretation board for each space or at the entrances to a combined network of spaces. These will show connected routes as well as explain the purpose of the recreational mitigation land, any expectations regarding behaviour, and indicating any dog management requirements, such as dog off lead areas.
- Pathways made of substrates that can be used all year round.

Phasing of ANRG

Phasing the areas of ANRG in line with the phasing the of the development is recommended, to support and provide recreation mitigation from the beginning. A phasing plan is recommended to be created and signed off by the New Forest District Council. The phasing plan should set out areas of development and mitigation being brought forward at different times in line with the development.

Future Management of ANRG

The designated ANRG on site which has been provided for mitigation purposes, must be secured for its intended purpose in perpetuity which is 90 years. A management and monitoring plan is required to ensure that the ANRG is functional for the entire 90 years. The monitoring management plan, should include details such as maintenance of pathways, replacement of dog bins, furniture, management of recreational spaces etc. This is recommended to be submit to the LPA and secured by a suitable worded condition. The designated ANRG on site which has been provided for mitigation purposes, must be secured for its intended purpose in perpetuity. Ideally the land designated for ANRG will be transferred to public ownership/control. It is for you as competent authority to be satisfied the mitigation land will be appropriately secured, monitored and is enforceable. Funding and responsibilities should be outlined. A suitable long-term management and monitoring plan should be agreed that ensures it will remain effective over the lifetime of the development it serves.

ANRG and Biodiversity Net Gain Guidance

ANRG can be included in developers' BNG calculations up to a maximum value of no net loss, as calculated by the biodiversity metric. This means that 10% of a developer's BNG units must come from other, additional activities.

Additional habitat creations or enhancements within a ANRG, which go over and above the site's existing requirements to function as a ANRG in perpetuity, could contribute to a developer's BNG beyond no net loss.

Any proposed habitat enhancements or creations within a ANRG must not undermine the ANRG original design principles and purpose, such as deflecting people and pets from visiting New Forests designates sites. Consideration should also be given to other ecosystems services provided by the ANRG. Careful design and an appropriate management plan will make sure BNG does not compete with these.

The area of ANRG is required to be secured for 90 years in perpetuity, whereas BNG is required to be secured for 30 years. It is recommended that management

plans are carefully set out according to the time scales and requirements. Biodiversity net gain assessments should be accompanied by a management and monitoring plan outlining management requirements for 30 years.

Ideally developers and LPAs, Habitat sites strategic solutions should work alongside strategic licensing and BNG in a combined approach to deliver for the natural environment in a place. Where applicable, enhancements or additional features delivered for BNG, should be informed by local nature or wildlife strategies and priorities, such as LNRS.

Landscaping

The proposed development is for a site close to the New Forest National Park. Natural England advises that the planning authority uses national and local policies, together with local landscape expertise and information to determine the proposal. The policy and statutory framework to guide your decision and the role of local advice are explained below. Your decision should be guided by paragraphs 176 and 177 of the National Planning Policy Framework which gives the highest status of protection for the 'landscape and scenic beauty' of AONBs and National Parks. For major development proposals paragraph 177 sets out criteria to determine whether the development should exceptionally be permitted within the designated landscape. Alongside national policy you should also apply landscape policies set out in your development plan, or appropriate saved policies.

Protected Species

Natural England has produced standing advice to help planning authorities understand the impact of particular developments on protected species. We advise that the standing advice is interpreted for you by your district ecologist, or an equivalent independent party with the necessary expertise. Natural England will only provide bespoke advice on protected species where they form part of a SSSI or in exceptional circumstances.

Biodiversity Enhancements

The New Forest District Council Policy ENV1 outlines that all applicants will be required to demonstrate the impacts of their proposal on biodiversity. For certain types of development by submission of an Ecological Appraisal, which should outline the mitigation and enhancement measures needed to achieve a net gain in biodiversity. Additional measures to enhance biodiversity across the area of ANRG, could include the following;

- Retaining hedgerows and trees along the boundaries.
- Retaining and enhancing hedgerow with native species planting.
- Plant native tree species characteristic to the local area within including fruit trees such as cherry, apple and pear and those with early spring blossom such as hawthorn and blackthorn.
- Using native plants in landscaping schemes for better nectar and seed sources for bees and birds. Species list can be found at Bumblebee Conservation Trust.
- Planting night blooming plants to attract bats and insects, species lists can be found within the Encouraging Bat guide from the Bat Conservation Trust. Seed mixes including Bats in Garden Wildflower Mix to attract bats and insects can be found at John Chambers.
- Creating highway and by ways in connecting fences, with sign-posts for hedgehog and other species, guidance found at RSPB Hedgehog Highways document.
- Bat and bird boxes on retained trees along the boundary.

- Create a pond (Link to Froglife Guidance here).
- Retain and create deadwood habitats e.g. log piles.

Sensitive Lighting Strategy

A sensitive lighting scheme should be designed and implemented to maintain and retain dark corridors used as an important commuting corridor for bats as well as other protected and notable species. The Bat and Conservation Trust have produced a guidance document Bats and Artificial Lighting in the UK. Further general advice on the protected species and other natural environment issues is provided at Annex A.

New Forest National Park Authority

The District Council will be aware that national policy set out in paragraph 176 of the NPPF (2023) states, "The scale and extent of development within all these designated areas [National Parks and AONBs] should be limited, while development within their setting should be sensitively located and designed to avoid or minimise adverse impacts on the designated areas." This development is within the setting of the New Forest National Park and there is an opportunity to ensure an appropriate landscape transition from the developed area of the town of Ringwood to the nationally protected landscape to the east.

It is noted that the proposed 'Accessible Natural Recreational Greenspace' (ANRG) provision is linked to the NFDC Local Plan (2020) strategic site allocation 13 (Policy SS13 - Land at Moortown Lane, Ringwood. This policy allocates the site for 'at least 480 dwellings'. The concept plan taken from the NFDC Local Plan (2019) envisaged that the 480 dwellings and required ANRG would be accommodated within the allocated site. The area of land subject to this NFDC application is outside the Council's Local Plan allocation. It is noted that Ringwood Town Council has objected to this in principle, stating: The application is contrived. It is an artificial device to increase the number of houses and housing density within Strategic Site 13 (SS13).

For the ANRG provision to work and perform its required function in mitigating recreational impacts from the planned development on the New Forest's internationally designated sites, it must be accessible from the new development. The submitted Planning Statement states, "The ANRG sought herein is intended to provide mitigation for the residential development at Land North of Moortown Lane (21/11723) to which the site would be linked by way of a 3m footway/cycleway. To this end the two applications should necessarily be 'read together'." Figure 2 in the submitted Planning Statement shows this link from the development site to the ANRG provision, which is detached from the main development site. NFDC will need to be fully satisfied that this link is safe, attractive and usable for the ANRG to perform its legal function.

The Authority's Landscape Officer has been consulted and has provided the following comments:

"The proposed additional ANRG to the east of Crow Lane sits immediately adjacent to the New Forest National Park (NFNP) boundary at its southern and south eastern boundary, with the Public Right of Way at the southern tip of the ANRG forming the southerly site boundary, also bordering the NFNP boundary.

Therefore, it can be reasonably assessed that the ANRG sits within the immediate setting of the NFNP.

In the Landscape Strategy document submitted it is stated 'To relieve pressure from

(on) the NFNP an additional 9.57 Ha of open space has been provided as an ANRG'. A 3-metre wide tarmac cycle/footpath is shown in the Landscape Detailed Design drawings that runs across the north west of the ANRG, linking to the Castleman Trail running along the north east boundary to the ANRG.

I would comment that the close proximity of the proposed ANRG to the NFNP boundary and the direct link to the Castleman Trail does not 'relieve pressure from (on) the NFNP' but in fact does the opposite. A right turn onto the Castleman Trail takes recreational users directly into the NFNP, first to the enclosed landscape and then onto the Open Forest landscape less than 2 kilometres away. On a practical basis, the 3-metre wide tarmac cycle/footpath is shown on the Detailed Landscape Design drawings as running along the existing mature hedgerow and tree boundary between the car parks of the Liberty's Centre and the adjacent WI Hall, with no indication that there would be any 'existing vegetation to be removed' (as per the key to the drawing). There is also a roadside ditch to Crow Lane, and it is not detailed how the 3-metre wide tarmac cycle/footpath would cross the ditch, also with the roadside hedge having to be removed to accommodate the 3 metre wide path. Although this area falls outside the NFNP boundary, retaining mature trees and hedgerow close to the NFNP boundary is of importance.

Overall, it is considered that the creation of the proposed ANRG with its introduction of suburban style features to satisfy its recreational purpose, would be detrimental to the setting of the NFNP and its landscape character. I would also note that the intended aim to redirect and contain recreational users from the housing area away from the NFNP would not be achieved, with Castleman Trail giving direct access in a short distance/time to the east to the NFNP and its most sensitive landscapes.

Hampshire County Council (HCC) Countryside Services, February 2024)

Hampshire Countryside Service (the Service) acts as Highway Authority in respect of Public Rights of Way (PROW) and Commons Registration Authority. We also manage Country Parks and Countryside Sites throughout Hampshire.

Consultation response to both applications (23/10707 and 21/11723): No objection subject to obligations and conditions (as set out).

Following the submission of further information from the applicant the Service provides the following comments.

Ringwood Bridleway 509/Castleman Trail improvements

The wider development shall cause a significant increase in user volume on this route and, therefore, a contribution for surface enhancement is seen as justifiable and is specified in the Obligations section below. It is noted that the section directly adjacent to the site shall not form part of the financial obligation – it is used by vehicles associated with the neighbouring fishing club and discussions between the Service and the club regarding vehicle damage to the surface of the PROW are ongoing. It is advised that any internal footways, where they are proposed to connect to the public bridleway, are designed and constructed to Hampshire Countryside Service design standards to ensure no detrimental impact to the surface of the PROW. The applicant shall provide the Service with a specification for the footways where they are proposed to connect to the PROW, for the Service's approval in advance.

Ringwood Footpath

41a footbridge This bridge, located on the southeast boundary of the 'Open space

adjacent to Crow Lane' site is proposed to be upgraded, as per point 17, page 14 of the Green Infrastructure Strategy. The Service is supportive of this and, prior to works taking place, it shall be provided with a specification and details of the work for its approval in advance.

HCC Highways Authority

The Highway Authority previously responded to this application dated 27th October 2023, with no objections. This recommendation therefore still remains.

HCC Lead Local Flood Authority

As there is minimal development proposed that would generate additional surface water runoff, the LLFA has no comments.

Nature Space

It is recommended that the great crested newt survey data is updated as it was conducted in 2021 so it is now considered out of date and unreliable. Therefore, the applicant can either: - Submit a NatureSpace Report or Certificate to demonstrate that the impacts of the proposed development can be addressed through New Forest Council's District Licence (more details can be found at www.naturespaceuk.com); or - - Provide further information (for example, updated survey information on nearby ponds), in line with Natural England's Standing Advice, to rule out impacts to great crested newts, or demonstrate how any impacts can be addressed through appropriate mitigation/compensation proposals.

New Forest District Council (NFDC) Tree Officer

Further to the previous comments the access point of the cycleway from the main road (Crow Lane) has been revised/removed from the proposal with access for a 2m secondary footway utilising the existing right of way (Castleman Trail) to the east of the site. A revised Arboricultural Impact Assessment (incorporating Tree Protection Measures) by The Environmental Dimension Partnership Ltd (Report Reference edp5444_r028b dated January 2024) has been submitted to address any impact on trees and protection measures to be implemented.

In terms of the important and protected trees on site this is a preferred option. The new access points into the ANRG as shown are located outside of the root Protection Areas (RPA's) of trees to be retained. A small number of trees require removal (within G59) on the southeast corner to facilitate the new surface (2m secondary footway). This would be acceptable, and the loss of these trees can be mitigated within an approved landscaping scheme with replacement tree planting.

A minor incursion into the RPA of a mature Oak (T61) is required to facilitate a replacement footbridge. The site topography at this point is such that the majority of the root system will not be affected by this as the tree sits on the bank of the water course. Provided sufficient care is taken to install a replacement bridge there is unlikely to be any significant adverse impact. An Arboricultural method statement would be required to detail the methodology of construction within the RPA. Overall, there are no objections subject to conditions

NFDC Open Space Officer

The site provides a suitable location for delivery of the proposed mitigation benefits, forming a wedge between existing recreation activities and paths and ANRG near to

the proposed development with a possible connection. However, the applicant will need to demonstrate within their separate application that the new development is compliant to NFDC Policy CS7 and delivers the size of each type of open space for number of new occupants.

The layout of paths within the site and the surfacing of these appears appropriate. Further detail on the construction method should be submitted, including ensuring the gravel paths have suitable foundation and a camber to the edges to shed surface water.

The applicant should give further details how this site interfaces with the PROW running to the south east of the site. The current watercourse crossing is unsuitable for all users and a proper durable replacement (suggested to be in GRP to ensure anti-slip) should be included in the plans. Further detailed comment on design and maintenance also provided.

NFDC Ecologist

Designated sites: No significant adverse impacts on designated sites are anticipated.

BNG: The proposals would result in a net gain for biodiversity.

Recommend that a Biodiversity Management Plan (BMP) is secured by condition. This should include enhancement measures e.g. bird and bat boxes and management and monitoring of habitats on site to ensure the delivery of BNG including (as listed).

The Natural England comment on lighting is noted. It is understood that the site will not have lighting. Further detailed comments on surveys, great crested newts, Ecological Construction Method Statement.

As identified by NE, the ANRG use should be secured in perpetuity and a phasing plan is sought to understand when the ANRG will be provided relative to the linked development across the road if granted.

NFDC Landscape Officer (Updated comment - May 2024)

This parcel of land does not meet the criteria for Alternative Natural Recreational Greenspace (ANRG) as set out in Policy ENV1 para 4.ii.a which requires: Direct provision by the developer of at least eight hectares of natural recreational greenspace per 1,000 population located on the development site or directly adjoining and well connected to it.

The application site is not on, directly adjoining or well-connected to the site it is intended to provide ANRG for (Strategic Site 13) and as such is not acceptable. The comments below therefore relate only to the application for change of use from agricultural land to public open space and should not be taken to imply that this site is considered acceptable as ANRG to mitigate impacts caused by the development at SS13 (Moortown Lane).

The Landscape and Visual Appraisal is thorough and well-organised. It concludes that the landscape effects on the site, and the immediate surroundings (15 years after completion) would be minor beneficial). The wider Landscape Character Type is predicted to experience a minor-negligible beneficial effect. Whilst the study does not appear to explicitly refer to the 'setting' of the New Forest National Park (NFNP), whose boundary forms the eastern site boundary, as a landscape receptor, views

from the adjacent NFNP are assessed and predicted to result in a moderate-minor beneficial effect upon maturation of the proposals. Other receptors are predicted to experience either beneficial or neutral effects.

he layout submitted does not have sufficient features of interest to provide an incentive to visit to for any length of time. Opportunities exist to subdivide the space with native hedges, groups of native trees or shrubs to frame views and create a variety of distinct spaces, including an off-lead area for dogs. Additional secondary and tertiary paths should be added to provide a variety of routes for walkers. The dog activity equipment could be located alongside the path to create a trail, rather than confined to one area.

The drainage feature serves to cut off a slither of the site and render it nearly inaccessible. Breaking the swale into shorter lengths, or installing a crossing would create a feature of interest for visitors. Additional paths to the south of it could provide alternative routes. Thought should be given to planting the wet areas of the site and swale with suitable species that could benefit from the seasonally wet soil and enhance biodiversity.

The site is known to be seasonally wet, particularly along its boundary with the Castleman Trail. Proposals should ensure that the paths remain firm and dry throughout the year. Primary routes should be of bitmac and secondary routes of hoggin. Tertiary routes of mown grass can also be provided. Lengths of boardwalk may be required to bridge wet areas and link different levels. Any constructed slopes or ramps should be accessible for wheelchair and mobility scooter users. Details of these and proposed levels should be provided.

Tree and shrub species should be native, selected for their ability to cope with seasonal waterlogging, and reflect those found locally. Opportunities exist on this site for planting Black Poplar. White-barked birch is not considered suitable for open countryside. Downy birch could be planted in addition to Silver Birch if variety is required. The ornamental planting to the north of the proposed drainage ditch is considered inappropriate and should be replaced with native planting or species-rich meadow. Wheelchair accessible picnic benches should be positioned so that children will not run into the overhanging table-top. Grass/meadow mixes specified should be suitable for the local soil conditions and take into account potential waterlogging. Opportunities exist to plant native bulbs to increase biodiversity and seasonal interest.

Artificial grass is not considered suitable around the dog activity items. A hoggin surround should be installed. NFDC currently operates on a 'combined bin' system with litter and dog waste collected in the same bin. Details of proposed planting details are required for native shrubs and trees. For construction and planting details refer to 'A guide to Performance Specifications and Standard Details for Public Accessible Spaces' by NFDC which sets out the minimum standard required. If the committee is minded to grant consent to for this application it is recommended that revised Detailed Landscape Design plans are secured by condition.

NFDC Conservation

No comment.

9 REPRESENTATIONS RECEIVED

No representations received.

10 PLANNING ASSESSMENT

10.1 Principle of Development

South West Hampshire Green Belt

Local Plan Policy ENV2 (The South West Hampshire Green Belt) sets out that the openness and permanence of the South West Hampshire Green Belt will be preserved with particular regard to its state purposes and those of national policy for the Green Belt. Development proposals in the Green Belt will be determined in accordance with national planning policy.

The National Planning Policy Framework (NPPF) (December 2023) Paragraph 155 sets out that certain other forms of development are also not inappropriate in the Green Belt provided they preserve its openness and do not conflict with the purposes of including land within it.

- a. mineral extraction
- b. engineering operations;
- c. local transport infrastructure which can demonstrate a requirement for a Green Belt location;
- d. the re-use of buildings provided that the buildings are of permanent and substantial construction;
- e. material changes in the use of land (such as changes of use for outdoor sport or recreation, or for cemeteries and burial grounds); and
- f. development, including buildings, brought forward under a Community Right to Build Order or Neighbourhood Development Order

Essentially, the proposal is in line with criterion (e) as a material change of use for public open space. The proposal does not include any new buildings and as such the openness of the Green Belt will be preserved.

NPPF paragraph 143 sets out the five purposes of Green Belt:

- to check the unrestricted sprawl of large built-up areas;
- to prevent neighbouring towns merging into one another;
- to assist in safeguarding the countryside from encroachment;
- to preserve the setting and special character of historic towns; and
- to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Again, given that the proposal does not include any new buildings the proposal would not conflict with any of the purposes i, ii, iii and iv set out in NPPF paragraph 143. Purpose (v) is not applicable given that the land in the application is neither derelict nor urban.

As such, the proposed public open space is an appropriate form of development in the South West Hampshire Green Belt and therefore accords with Local Plan Policy ENV2.

Alternative Natural Recreational Greenspace

Local Plan Policy ENV1 (Mitigating the impacts of development on International Nature Conservation sites) criterion 4 (ii) sets out that the approved mitigation measures for residential developments currently include for developments of 50 or more net additional residential dwellings:

- a. Direct provision by the developer of at least eight hectares of natural recreational greenspace per 1,000 population located on the development site or directly adjoining and well connected to it; and
- b. A financial contribution towards Access and Visitor Management and Monitoring

The Mitigation of Recreational Impacts Supplementary Planning Document (SPD) (May 2021) provides supplementary planning guidance to Local Plan Policy ENV1

The linked mixed-use application (21/11723) includes sufficient Alternative Natural Recreational Greenspace (ANRG) within that application site to meet its needs. This separate application would provide additional ANRG over and above that.

This application site is not adjoining the application site for 21/11723. There is a clear gap between the two application site boundaries comprising Crow Lane itself and land on its western side. Neither is this application site adjoining the boundary of the Local Plan Allocation Site SS13 (Land at Moortown Lane, Ringwood). The boundary of SS13 extends only as far as the western side of Crow Lane.

However, given both existing access provision adjacent to this application site and the package of on-site and off-site access improvements set out in conjunction with 21/11723 it is considered that this application site is well connected to both the Local Plan Allocation Site SS13 and the 21/11723 application site. The application site is adjacent to the existing Castleman Trail which is an established bridleway connecting the land immediately to the north of the application which extends westwards bisecting the RING3 public open space and hence on towards Ringwood Town Centre.

Access improvements proposed in 21/11723 which could assist in facilitating access to this additional public open space include:

- Improvements to the existing Public Rights of Way (PROW) in the eastern portion of the linked application site 21.11723
- Financial contribution towards improving access within the RING3 land;
- Off-site access works at the junction of Crow Arch Lane and Crow Lane which seek to improve the connections along the Castleman Trail;
- Further off-site access works at the western end of Crow Arch Lane which seek to link the Castleman Trail and the public open space in Phase 1 of 21/11723

As such, it is considered that this application, in conjunction with existing access arrangements and proposed access improvements sought through 21/11723 can demonstrate that it would be well-connected.

The supporting text to Policy ENV1 (Paragraph 5.23) sets out that:

In some instances, it will not be possible to provide recreational mitigation land on or adjoining sites of 50 or more homes, for example on redevelopment sites in existing built-up areas. In these circumstances the developer should put forward the required eight hectares per 1,000 population of land for recreational mitigation in an alternative location that will provide equivalent benefits to the settlement where the site is located, preferably in close proximity to the site.

As such, the Local Plan supporting text sets out a degree of flexibility in terms of the location of recreational mitigation land. Paragraph 5.23 is clear that redevelopment sites in existing built-up areas is an example. The principle of alternative locations is not exclusive to larger urban regeneration projects.

In this instance, the proposed public open space is in close proximity to both the Local Plan Allocation Site SS13 and the 21/11723 application site. For example, using the existing public right of way in the eastern portion of Local Plan Allocation Site SS13 there is a direct link from the public open space in the linked application 21/11723 to the Ring 3 public open space north of Crow Arch Lane and hence the Castleman Trail which bisects it.

The NFDC Mitigation SPD (May 2021) sets out (paragraphs A4.1.7 - A4.1.8) that: *Normally new residential developments on large-scale sites should deliver ANRG in accordance with guidance set out in this document and show this at the planning application stage within a clear rationale for green infrastructure as part of comprehensive layout designs. Where it is agreed that this is not possible, delivery of an alternative offer of ANRG, that best fits this guidance in all other ways, and provides ANRG of any equivalent effectiveness and quality should be proposed.*

As set out, in this instance the delivery of the alternative ANRG is in addition to that proposed within the application site (21/11723). Notwithstanding this, the SPD sets out – reflecting Local Plan paragraph 5.23 - that in principle the delivery of an alternative offer of ANRG can be considered by the Local Planning Authority (LPA).

The Mitigation SPD also sets out (paragraph A4.1.13) that (emphasis added):

It may be possible in some circumstances to extend the offer of ANRG beyond the development site boundary provided that:

- The land in question can provide easily accessible and effective recreational mitigation;
- The land in question is within the control of the site developer; and
- That its inclusion would support the principles of an integrated green infrastructure approach (being adjoining and well-connected to the site)

However, it will not normally be acceptable to offer an area of land nearby as ANRG simply in order to expand the proportion of built land within the allocation site to an unreasonable degree or to the detriment of landscape character.

The ANRG in the application site is, as set out, accessible to both the future occupiers of the proposed residential development in 21/11723 and the wider local community. The land is within the control of the site developer – both applications (21/11723 and 23/10707) are from the same developer. As such, the proposal meets the first two provisions in paragraph A4.1.3 of the Mitigation SPD.

As set out, the application site is not adjoining the main application site but is well-connected. As such, the proposal has not met one of the criteria but has met the other criteria. Hence, when addressing the guidance in A4.1.3 an on-balance decision could be made.

The linked application site (Ref: 21/11723) includes a sufficient level of ANRG to meet the needs arising from the proposed housing. It also has increased coverage of public open space including ANRG than set out in the Local Plan Concept Masterplan and is below the minimum number of dwellings the Allocation Site is seeking to provide. As such, it is considered that this proposal does not support an unreasonable degree of built development in the main application site.

The Mitigation SPD also sets out (Paragraph A4.4.5) the following guidance:

- *For an area to be considered as spacious enough to offer a sense of being in the countryside at least part of the provision should consist of a space of at least*

120 metres across in all directions.

- *Secondary spaces should have a diameter of at least 60m and are properly linked to the main space, with the links being spacious (minimum 15m width).*
- *Secondary spaces cannot be disconnected from the main space.*
- *Provided that ANRG spaces meet the dimensional criteria, additional public open spaces uses should be integrated within the design of the development.*

The submitted Alternative Natural Recreational Greenspace (ANRG) Strategy (edp, 22/1/2024, Ref: edp5444_d114b) sets out that the ANRG in this application would be at least 120 metres in diameter and as such meets the Mitigation SPD dimensional criteria guidance and is classified as a 'main space' in line with Paragraph A4.4.5).

Therefore, the secondary space guidance in Paragraph A4.4.5 of the Mitigation SPD does not apply in this instance.

For reference, it should be noted that several of the Local Plan Strategic Site Allocations have all or part of their on-site ANRG severed from areas identified in the supporting Local Plan Concept Masterplan by roads of various sizes. This includes SS1 in Totton and SS8 in Hordle.

The proposal is for a combined public open space provision informal open space and ANRG. As such, in line with the Mitigation SPD paragraph A4.4.5, the principle of having a combined function public open space is acceptable.

As set out, the proposed ANRG is well-connected to the linked development (21/11723) by virtue of the existing and proposed access arrangements. The ANRG is not adjoining to either Local Plan Allocation Site SS13 or the 21/11723 application site.

However, as set out, Local Plan paragraph 5.23 sets out that alternative locations for ANRG in 'close proximity to the site' can also be considered. Essentially, it is considered that the proposed additional ANRG is in 'close proximity' to the linked main site despite not being adjacent.

The proposed ANRG would also be a main space as defined in the Mitigation SPD and hence would not be discounted by virtue of the severance element of the guidance. Public open spaces combining ANRG and informal open spaces are acceptable in line with the Mitigation SPD guidance. The main application (21/11723) has sufficient ANRG and as such this is not a proposal to sought to overcome overt deficiencies in that application.

The Local Plan and Mitigation SPD provide scope for the LPA to consider alternative sites for ANRG provision. On balance of considerations, whilst the proposed ANRG open space is not adjacent to the application site (and Local Plan Allocation Site) it is well-connected through existing public rights of way, public open space (Ring 3 land) and the Castleman Trail and hence in close proximity. As such, the proposal is acceptable in principle.

Commentary on the management of the proposed ANRG in line with the response from Natural England is set out below (Section 10.2 Ecology (ii) Habitats Mitigation).

Therefore, it is considered that the proposed ANRG is acceptable in principle and as such satisfies Local Plan Policies ENV1 and the Mitigation SPD.

ii. Informal Public Open Space

Local Plan Policy CS7 (Open spaces, sport and recreation) sets out that the aim is to provide, as a minimum standard, the equivalent of 3.5 hectares of public open space per 1000 population to serve the district's towns and larger villages. This provision will be supplemented by support for the community use of sports pitches on educational land and by private provision. There will be a presumption against any development that involves the loss of a sport, recreation or play facility except where it can be demonstrated that alternative facilities of equal or better quality will be provided in an equally accessible location as part of the development. Improvements will be made to enhance recreation, play and sports facilities within communities. Outdoor opportunities to improve the physical fitness of all age groups will be enhanced by providing accessible green spaces within our towns and villages, especially where new development takes place, and by creating safe environments for walking and cycling within and adjoining our towns and villages, where access is compatible with environmental designations. The improvement of play, sports and other public open space provision will be implemented in a number of ways.

The application is supported by a Green Infrastructure Strategy (edp, January 2024) which sets out that the proposal would provide an additional 1.12 ha of informal open space. This proposed provision would address the shortfall of 1.03 ha informal open space identified in the linked main application.

The proposed informal open space would have the same access arrangements as the proposed ANRG i.e. from the Castleman Trail. The NFDC Open Space Officer has set out that the site provides a suitable location for delivery of the proposed mitigation benefits, forming a wedge between existing recreation activities and paths, the proposed ANRG, and is near to the proposed development with an existing pedestrian connection.

The proposed informal public open space has been designed primarily for dog walkers. The proposed informal open space includes dog agility equipment. The dedicated children's play spaces for the linked main application are all within that site and it is not intended to replicate or provide additional play equipment here.

The appropriate long-term management and monitoring of the proposed public open space, both ANRG and informal open space, will be secured through a s106 planning obligation linked to the main application (21/11723). The proposed public open space will be managed by a management company appointed by the site promoters.

Essentially, there are no specific planning policy restrictions in providing informal public open space in principle at this location and as such the proposal satisfies Local Plan Policy CS7.

10.2 Ecology

i. Protected Species and Biodiversity Net Gain

Local Plan Policy DM2 (Nature Conservation, Biodiversity and Geodiversity) sets out how development proposals should address international, national and local designed sites. Development proposals should encourage biodiversity and not adversely affect protected flora and fauna.

The application is supported by an Ecological Appraisal (edp, January 2024, Ref: edp5444_r024b), Reptile Mitigation Strategy (edp, March 2024, Ref: edp5444_r031e) and Ecology Baseline (joint with the site in application 21/11723) (edp, January 2024, Ref: edp5444_r009e).

The NFDC Ecologist has set out that the proposals would result in a net gain for biodiversity and recommends that a Biodiversity Management Plan (BMP) is secured by condition. The NFDC Ecologist is content that the ecological baseline provided has adequately set out enough to make an informed planning decision with respect to ecology and does not feel undertaking additional surveys at this stage would be proportionate given the amount of work done to date.

The NFDC Ecologist is also content with regard to Great Crested Newts (GCN) that even if present an offence is highly unlikely in the work area and that favourable conservation status of the GCN is unlikely to be affected. The Reptile Mitigation Strategy also includes a hibernacula in the additional ANRG land which can be secured through a suitable condition.

The NFDC Ecologist has also set out that an Ecological Construction Method Statement (ECMS) should be provided through a suitable condition which is acceptable.

A phasing plan for the additional ANRG is requested by Natural England and the NFDC Ecologist. This can be secured through a suitable condition.

The proposal does not include any outdoor lighting and as such there is no need for suitable condition.

In line with the above, subject to necessary mitigation secured through suitable conditions, the proposal has addressed the material ecological considerations of biodiversity net gain and protected species.

Therefore, suitable conditions, the proposal accords with Local Plan Policy DM2.

ii. Habitats Mitigation

Local Plan Policy ENV1 (Mitigating the impacts of development on International Nature Conservation Sites) sets out that development will only be permitted where the Council is satisfied that any necessary mitigation, management or monitoring measures are secured in perpetuity as part of the proposal and will be implemented in a timely manner, such that, in combination with other plans and development proposals, there will not be adverse effects on the integrity of designated sites. For residential development adverse effects should be adequately mitigated by implementing measures relevant to the site location including as set out in the Mitigation for Recreational Impacts SPD, Solent Recreation Mitigation Strategy and nutrient management guidance.

Natural England has set out that as submitted, the application could have potential significant effects on the below designated sites:

- Avon Valley Special Protection Area (SPA) / Ramsar • New Forest Special Area of Conservation (SAC)
- New Forest SPA / Ramsar site
- Dorset Heathlands SPA/ Ramsar sites
- Dorset Heath SAC
- New Forest Site of Scientific Interest (SSSI)

Natural England go on to set out that in order to mitigate these adverse effects and make the development acceptable, an Alternative Natural Recreational Greenspace (ANRG) Management and Monitoring Plan for the perpetuity (90 years) of the ANRG to be secured via a planning obligation clause.

Therefore, subject to a suitable conditions and planning obligation clause, securing the Management and Monitoring Plan and linked to the main application ANRG would be sought and hence the proposal would accord with Local Plan Policy ENV1.

10.3 Landscape and Trees

Local Plan Policy ENV1 (Mitigating the impacts of development on International Nature Conservation sites) sets out that for residential development, inter alia, adverse effects can be adequately mitigated by implementing approved measures relevant to the site location, including as set out in the Mitigation for Recreational Impacts SPD. Policy criterion 4(ii) sets out that for developments of 50 or more net additional residential dwellings direct provision by the developer of at least eight hectares of natural recreational greenspace per 1,000 population located on the development site or directly adjoining and well connected to it in addition to management and monitoring contributions.

Local Plan Policy ENV4 (Landscape character and quality) sets out that where development is proposed there is a requirement to retain and/or enhance the following landscape features and characteristics through sensitive design, mitigation and enhancement measures, to successfully integrate new development into the local landscape context subject to supporting criteria (as set out).

The Mitigation for Recreational Impacts on New Forest European Sites Supplementary Planning Document (SPD) (May 2021) gives detailed guidance on the implementation of Policy ENV1: Mitigating the impact of development on International Nature Conservation sites with regard to recreational impacts.

i. Impact on Setting of New Forest National Park and Access to the New Forest National Park

NPPF paragraph 182 sets out (emphasis added):

The scale and extent of development within all these designated areas (as set out) should be limited, while development within their setting should be sensitively located and designed to avoid or minimise adverse impacts on the designated areas.

The application is supported by a Landscape and Visual Appraisal (LVA) for the additional ANRG Land East of Crow Lane, Ringwood (edp, May 2023, Ref: edp5444_r027a). NFDC Landscape has set out that the LVA is thorough and well-organised. NFDC Landscape has highlighted that the LVA concludes that as a landscape receptor, views from the adjacent New Forest National Park are assessed and predicted to result in a modest ('moderate-minor') beneficial effect upon maturation of the proposals.

However, the New Forest National Park Authority (NFNPA) has set out that the creation of the ANRG with its introduction of suburban style features to satisfy its recreational purpose, would be detrimental to the setting of the NFNP and its landscape character.

The view that the proposal would introduce suburban style features and hence

detrimental to the setting of the New Forest National Park and its landscape character is not shared by NFDC Officers. As set out, the proposal does not include any new buildings. The proposal does include new rural footpaths comprised of hoggin or similar materials and any public furniture (benches, dog agility equipment) would be modest in size and akin to those found in the National Park itself. The proposal includes new landscape planting (see commentary below) and would retain the essentially open character of the existing agricultural field.

The NFNPA also set out that the intended aim to redirect and contain recreational users from the housing area away from the NFNP would not be achieved, with Castleman Trail giving direct access in a short distance/time to the east to the NFNPA and its most sensitive landscapes. NFDC Officers do not agree with this comment given that as the NFNPA themselves state - it is the existing Castleman Trail itself which provides direct access, not this proposal. Essentially, people could continue access the NFNP through the Castleman Trail whether this public open space is there or not.

As such, the proposed public open space would not diminish the visual appreciation of the New Forest National Park from key viewpoints, nor would it be to the detriment of the special qualities of the National Park. For reference, other Local Plan Allocation site policies have set out in the supporting Concept Masterplans public open space including ANRG adjacent to the National Park boundary – including site SS14 Land to the north of Hightown Road, Ringwood.

Therefore, the proposal is, subject to suitable landscape conditions, sufficiently sensitively designed to avoid any notable adverse impacts on the setting of the New Forest National Park in line with NPPF paragraph 182.

ii. Landscaping Strategy

The proposal is supported by a revised Phase 1 Detailed Landscape Design (edp 11 April 2024 Ref: edp5444_do78c).

NFDC Landscape has set out updated detailed comments (10 May 2024) on the proposed landscaping. NFDC Landscape notes that opportunities exist to subdivide the space with native hedges, groups of native trees or shrubs to frame views and create a variety of distinct spaces, including an off-lead area for dogs. Thought should be given to planting the wet areas of the site and swale with suitable species that could benefit from the seasonally wet soil and enhance biodiversity.

Essentially, Officers agree with these views and the necessary amendments are not so fundamental that they would affect what is being considered. The amendments can be secured through a detailed planning condition.

NFDC Landscape suggest a trail of dog agility equipment. However, Officers are minded that these proposed facilities are better concentrated in one place as set out in the Detailed Landscape Design.

However, Officers do agree with NFDC Landscape that artificial grass is not considered suitable around the dog activity items and that a hoggin surround should be installed instead. Again, this can be secured through a detailed planning condition.

NFDC Landscape also set out currently operates on a 'combined bin' system with litter and dog waste collected in the same bin. Again, this type of bin can be secured through a suitable condition.

As such, subject to suitable conditions including a detailed landscape design condition, the proposal satisfies Local Plan Policy ENV4.

iii. Trees

A revised Arboricultural Impact Assessment (incorporating Tree Protection Measures) (edp, Ref: edp5444_r028b, January 2024) has been submitted to address any impact on trees and protection measures to be implemented.

The NFDC Tree Officer has no objection and notes in his revised comments of February 2024 that the revision to the access arrangements whereby the original access point from Crow Lane has been removed from the proposal and the Castleman Trail used instead.

The NFDC Tree Officer has suggested two conditions which are both agreed. The second condition relates to the need for a method statement for the implementation of the proposed new footbridge in the south-east corner of the site given the nearby mature oak tree.

As such, subject to suitable conditions, the proposal would satisfy Local Plan Policy ENV1 criterion 4(ii) and Local Plan Policy ENV4.

10.4 Flood Risk and Drainage

Local Plan Policy CCC1 (Safe and Healthy Communities) criterion (iv)(b) sets out that in the interests of public safety, vulnerable developments will not be permitted, inter alia, in areas at risk of flooding unless in accordance with the sequential and exception tests.

The NPPF (December 2023) paragraphs 165 to 175 and Annex 3 (Flood risk vulnerability classification) sets out further guidance on planning and flood risk.

The Lead Local Flood Authority (LLFA) (Hampshire County Council) has raised no objection to the proposal. The site will be left largely greenfield in nature and therefore does not represent a flood risk with respect to surface water runoff. Given the open nature of the application site it would have reasonable resilience in terms of accommodating excess surface water from outside the site.

The applicants have submitted a Flood Risk Assessment (FRA) (Hydrock, January 2024). The FRA concludes that the proposed public open space is a water compatible development in line with NPPF Annex 3. As such, the site is not subjected to the NPPF sequential and exception tests.

The FRA also confirms that the development includes a shallow depression/drainage ditch to the site's western boundary to contain surface water runoff within the site including any runoff generated from any new internal paths. The detailed design for these proposed features can be secured through a suitable condition.

The application site is bounded by land to the east and west by areas identified at risk of both fluvial and surface water flooding. The representations from Ringwood Town Council (RTC) have highlighted localised flooding issues along Crow Lane and have provided photographs showing recent flood events.

However, it is considered that the proposal will not increase flood risk elsewhere given that the application site will not be subject to any significant additional

impermeable coverage and, as set out, will include internal features to address surface water runoff. Access to the site is from the Castleman Trail which is outside the fluvial and surface water flood zones as set out in the NFDC Strategic Flood Risk Assessment (SFRA).

As such, subject to suitable conditions securing the proposed drainage features, the proposal accords with Local Plan Policy CCC1 (iv)(b) and NPPF paragraph 173.

10.5 Other Matters

Highways and Access

Local Plan Policy CCC2 (Safe and Sustainable Travel) sets out that new development will be required, inter alia, to prioritise the provision of safe and convenient pedestrian access within developments

The Highway Authority (Hampshire County Council) has no objection to the change of use.

The comments received from Ringwood Town Council (RTC) with regard to road safety are noted. However, the Highway Authority has no objection and the RTC comments appear to reflect the earlier proposal to provide an access link across Crow Lane in the area adjacent to the WI Hall. This earlier proposed access has been removed from the proposal and replaced with the proposed enhancements to the Castleman Trail at the junction of Crow Lane and Crow Arch Lane to the north (as set out in the Committee Report for the main application).

The proposed footpaths within the public open space will be made of hoggin or a similar material and as such, subject to suitable condition, would address the comments made by NFDC Landscape.

NFDC Landscape also highlight the need for detailed design for any necessary embankments associated with the two proposed access points. This is agreed and a suitable design can be secured through detailed design conditions.

Ringwood Neighbourhood Plan

Policy R9 (Creating a Green Infrastructure and Nature Recovery Network) of the Ringwood Neighbourhood Plan designates a Green Infrastructure and Nature Recovery Network (as shown on the Nature Recovery Policy Map) for the purpose of promoting ecological connectivity, outdoor recreation and sustainable movement.

The Nature Recovery Network shown on the Ringwood Neighbourhood Plan Nature Recovery Policy Map is located to the south of the application site and as such does not directly apply to this proposal. Nonetheless, it is considered the proposal broadly accords with the objectives of connectivity, outdoor recreation and sustainable movement.

Mineral Safeguarding

The supporting Planning Statement (Savills, June 2023) sets out that Hampshire County Council has confirmed (18/11/2022) that they will not require a Mineral Resource Assessment for a change of agricultural land to ANRG as there will be no sterilisation given the nature of the proposal.

Loss of Agricultural Land

The application site is noted as good agricultural land on the Natural England website. Essentially, the loss of approximately 2.5 hectares of agricultural land that is not classified as best and most versatile is not considered to be significant and hence its loss is considered to be acceptable.

Viability

RTC commented in February 2024 on the impact of this proposal on the viability of the linked main application (21/11723).

The Planning Agent has confirmed in writing that the cost plan for 21/11723 includes a significant allowance for landscaping, inclusive of the Land East of Crow Lane public open space/ARNG. As such, there should be no additional impact on development viability of the main application.

10.6 Planning Balance and Conclusions

The proposal will provide suitable public open space in the form of ANRG and informal open space. The proposal is acceptable in terms of the South West Hampshire Green Belt. On balance of considerations the proposal is acceptable in terms of ANRG provision. The long-term management of the proposed public open space can be linked to the main application and secured through suitable conditions and a planning obligation. The proposal is acceptable in terms of informal public open space and assists in meeting the identified shortfall in the linked main application. The proposal, subject to suitable conditions, is sufficiently sensitively designed to minimise any adverse impacts on the setting of the New Forest National Park.

The proposal, subject to suitable conditions and a planning obligation, would be acceptable in terms of ecology, flood risk and drainage, trees, landscaping and access. The proposal would result in the loss of approximately 2.5 hectares of agricultural land but this is considered to be outweighed by the benefit of additional public open space.

Therefore, subject to suitable conditions and a s106 planning obligation, the proposal accords with Local Plan Policies ENV1, ENV2, ENV4, CS7, DM2, CCC2 and NPPF paragraphs 173 and 182.

RECOMMENDATION

Delegated Authority be given to the Service Manager (Development Management) to GRANT PERMISSION subject to:

- i. the prior completion of an agreement pursuant to Section 106 of the Town and Country Planning Act to secure the following:
 - Public Open Space Management and Maintenance framework
- ii. the imposition of the conditions set out below and any additional / amended conditions deemed necessary by the Service Manager (Development Management), having regard to the continuing Section 106 discussions to ensure consistency between the two sets of provisions.

13 RECOMMENDATION

Delegated Authority be given to the Service Manager Development Management to **GRANT PERMISSION** subject to:

i. the completion of a planning agreement pursuant to Section 106 of the Town and Country Planning Act to secure the following:

- Public Open Space Management and Maintenance framework

ii. the imposition of the conditions set out below.

Proposed Conditions:

1. The development hereby permitted shall be begun before the expiration of three years from the date of this permission.

Reason: To comply with Section 91 of the Town and Country Planning Act 1990 as amended by Section 51 of the Planning and Compulsory Purchase Act 2004.

2. **Hard and Soft Landscaping Detailed Design**

Before development commences a scheme of detailed hard and soft landscaping plans shall be submitted for approval in writing by the Local Planning Authority.

This scheme shall include:

- i. A schedule and plan of the existing trees and shrubs which have been agreed to be retained.
- ii. A schedule and specification for new tree planting (species, size, spacing, location, details of irrigation pipe) for the proposed public open space including informal open space, alternative natural recreational greenspace, including areas with open surface water drainage features (within and without the ANRG).
- iii. A schedule and specification for new soft planting (hedgerow, shrub, turf, lawns, bulbs and meadow) in terms of species, size, spacing and location for the proposed public open space including informal open space, alternative natural recreational greenspace, areas with open surface water drainage features (within and without the ANRG).
- iv. A schedule and specification of all hard landscaping including footpaths and raised access areas.
- v. A schedule and specification of ANRG interpretation boards relating to relevant ecological interests.
- vi. A schedule and specification of all dog agility equipment, benches, fencing, hibernacula, rock/boulders, feature logs and wooden direction posts.
- vii. All public bins within the public open space shall be wooden combined litter/dog waste such as Wybone or similar as agreed with

the Local Planning Authority and attached to a suitable concrete base.

All soft landscaping (trees and shrubs) proposals hereby approved under this condition shall be carried out no later than during the first planting season following the date when the development hereby permitted is ready for occupation or in accordance with a programme agreed in writing with the Local Planning Authority. All planted materials shall be maintained for at least five years and any trees or plants removed, dying, being severely damaged or becoming seriously diseased within five years of planting shall be replaced with others of similar size and species to those originally required to be planted. No development shall take place unless these details have been approved and then only in accordance with those details.

Reason: To ensure that the development provides a suitable soft and hard landscaping strategy and arboricultural strategy and to comply with Local Plan Policies ENV3 and ENV4.

3. **Public Rights of Way**

No vehicles, machinery, equipment, materials, waste or anything else associated with the works hereby proposed shall be parked, stored or positioned on or near to Ringwood Bridleway 509 as to cause an obstruction, hindrance or hazard to the public, who retain the right to use the PROW network at all times.

Reason: In the interests of public safety.

4. **Trees**

The trees on the site which are shown to be retained on the approved plans shall be protected during all site clearance, demolition and works in accordance with the measures set out in the Arboricultural Impact Assessment (incorporating Tree Protection Measures) by The Environmental Dimension Partnership Ltd (Report Reference edp5444_r028b dated January 2024) and Tree Protection Plan (drawing Number edp5444_d085b dated 17th January 2024)

Reason: To safeguard trees and natural features which are important to the visual amenities of the area.

5. **Trees and footbridge**

No development, demolition or site clearance shall take place until a method statement for the design/installation for the GRP footbridge of the approved development has been submitted to and approved in writing by the Local Planning Authority. Development shall only take place in accordance with these approved details.

Reason: To safeguard trees and natural features which are important to the visual amenities of the area.

6. **Ecological Construction Method Statement (ECMS)**

No development shall take place including any works of demolition and site clearance, until an Ecological Construction Method Statement (ECMS) has been submitted to, and approved in writing by, the Local Planning Authority.

Thereafter the approved ECMS shall be implemented and adhered to throughout the entire works construction period.

All works shall be carried out in accordance with the methodology and details set out in the Phase 1 Landscape and Ecological Management Plan (LEMP) (EDP, February 2024, Ref: edp5444_r033c) and other relevant submitted ecological documents and include the following to be submitted for approval:

- Method for ensuring no wildlife is trapped during construction works
- Protective fencing and other arrangements during construction
- Delivery of toolbox talks to all operatives
- Storage of topsoil and other materials including tree protection measures
- Detail measures to avoid and mitigate construction impacts on species and retained habitats
- Sensitive lighting during construction on sensitive ecological receptors e.g. roosts, bat flight lines, retained vegetation etc.

Reason: To comply with Local Plan policies STR1 and ENV3 and in the interests of the protection of ecological assets on site and their continued protection and enhancement in accordance with Local Plan policies STR1, ENV3 and DM2.

7. Sustainable Drainage System Detailed Design

No development shall take place until a detailed design, management and maintenance plan of surface water drainage for the site using SuDS methods has been submitted to and approved in writing by the Local Planning Authority.

The approved surface water drainage system shall be implemented in accordance with the approved Sustainable Drainage Strategy prior to the use of the public open space commencing and maintained thereafter for the lifetime of the development in line with any allied planning obligation.

Reason: To prevent the increased risk of flooding by ensuring the provision of a satisfactory means of surface water disposal is incorporated into the design and that the principles of sustainable drainage are incorporated into this proposal and maintained for the lifetime of the proposal.

8. Biodiversity Management Plan

Before any works commence on site, a Biodiversity Management Plan shall be carried out and details including an assessment of the impact of the proposed development and any appropriate measures to alleviate this shall be submitted to and approved in writing by the Local Planning Authority. Development shall only proceed in accordance with the approved details.

Reason: To safeguard protected species in accordance with Policies ENV3 and ENV4 of the Local Plan 2016-2036 Part One: Planning Strategy and Policies DM1, DM2 and DW-E12 of the Local Plan for the New Forest District outside the National Park (Part 2: Sites and Development Management).

9. **Landscape Ecological Management Plan (LEMP)**

The Additional ANRG Land off Moortown Lane, Ringwood Landscape and Ecological Management Plan (LEMP) (EDP, January 2024, Ref: edp5444_r036a) sets out a framework for the protection, establishment, management, maintenance and monitoring of the landscape and ecology features of the development as set out in the Ecological Appraisal (edp, January 2024, Ref: edp5444_r024b). The LEMP is to be read and enacted upon in conjunction with the following drawings and reports:

- All approved detailed Landscape Design plans (Condition 2);
 - Key features to be retained, enhanced and created should be fully addressed in line with Section 3 of the LEMP (EDP, January 2024, Ref: edp5444_r036a).
 - During the construction phase all habitat creation and approved landscaping planting should be undertaken in line with Section 4 of the LEMP (EDP, February 2024, Ref: edp5444_r036a)
 - For Years 1 to 5 following commencement of development the site developer should fully enact the Management Objectives and Maintenance Operations set out in Table 5.1 of the LEMP (EDP, January 2024, Ref: edp5444_r036a).
 - Monitoring and Timetable of works should be fully undertaken in line with Section 7 of the LEMP (EDP, January 2024, Ref: edp5444_r036a).
 - For Years 6 to 15 following commencement of development the site developer should fully enact the Management and Maintenance tasks in line with Section 6 of the LEMP (EDP, January 2024, Ref: edp5444_r036a).

Reason: In the interests of the protection of landscape and ecological assets on site and their continued protection and enhancement, and to ensure that all public areas are properly managed.

10. **Further details of new PROW footbridge**

Detailed drawings at the scale of the proposed footbridge (1:250 scale or a another suitable scale agreed by the Local Planning Authority) of the following shall be submitted to and be approved in writing by the Local Planning Authority before the relevant part of work is begun. The detail thereby approved shall be carried out in accordance with that approval.

- a) Public Right of Way footbridge.

Reason: In the interests of visual amenity and the character of the area.

PLANNING COMMITTEE

September 2024

Open Space Adjacent to
Crow Lane

23/10707

Scale 1:2564

N.B. If printing this plan from
the internet, it will not be to
scale.

Planning Committee 11 September 2024

Application Number:	23/10268 Reserved Matters
Site:	LAND NORTH OF, SALISBURY ROAD, CALMORE, NETLEY MARSH SO40 2RQ
Development:	Reserved Matters Application for the approval of appearance, landscaping, layout, and scale for 269 dwellings, associated and ancillary infrastructure, foul pumping station, play spaces, and sustainable drainage systems pursuant to Outline Planning Permission 20/10997 (AMENDED REASON TO ADVERTISE)
Applicant:	Bloor Homes Limited & The Trustees of Barker-Mill Hillyfields Trust
Agent:	White Peak Planning Limited
Target Date:	03/07/2023
Case Officer:	Ian Rayner
Officer Recommendation:	Service Manager - Grant
Reason for Referral to Committee:	Application is a major development proposal that relates to one of the Council's Strategic Site allocations.

1 SUMMARY OF THE MAIN ISSUES

The key issues are:

- 1) how the detailed proposals respond to the requirements, conditions and obligations of the Outline Planning Permission
- 2) the layout of the development and whether it is of an acceptable design quality
- 3) the scale of the development
- 4) the appearance of the development
- 5) the landscaping of the development

2 SITE DESCRIPTION

The application site

2.1 The application site extends to approximately 17.5 hectares and is an area of mainly agricultural land to the north of Totton, within the parish of Netley Marsh. The site, which is irregularly shaped, is set to the north of Salisbury Road (the A36) and to the west of Green Lane and Hill Street. The south-western corner of the site extends almost up to a slip road that gives access from Salisbury Road onto the A326 Totton Western Bypass.

2.2 The site currently has an open, rural character. The only existing buildings on the application site are a small group of agricultural buildings (of mainly modern construction) that are set close to Salisbury Road. There are areas of hardstanding

around these buildings, but otherwise the site is comprised of a number of individual fields laid to permanent pasture and grazed by livestock. The fields are bounded by hedgerows, some of which provide strong green corridors, and some where the vegetation is more intermittent. Perhaps the most significant natural feature on the application site is Hatton's Plantation, which is a small, triangular area of woodland in the south-eastern part of the site, adjacent to Green Lane.

2.3 The application site has a particularly long and relatively exposed northern edge, much of which is unmarked by existing physical features, the edge simply running through the middle of existing fields.

2.4 There is a high voltage overhead electricity cable that extends across the northern part of the site.

2.5 The application site is gently sloping. The lowest part of the site is in the south-eastern corner, at the intersection of Green Lane with Salisbury Road. The land rises gently upwards from this south-eastern corner to the site's northern edge, which forms a higher, more elevated area of land, before the land starts to drop away more steeply to the north of the application site.

The areas surrounding the application site

2.6 The south-western corner of the application site largely wraps around 2 existing residential properties - Brook House and Four Winds. These 2 properties are both set within large garden plots.

2.7 The north-eastern section of the application site that extends up to Hill Street abuts another residential property - Carnoustie House - which is again set within its own large garden plot.

2.8 Green Lane, which abuts a significant length of the site's eastern boundary is an unmade track that forms a public footpath. There is another public footpath that abuts the site's south-western corner.

2.9 Open fields extend northwards from the application site to the M27. As indicated above, the land drops away from the site's northern edge, with the land to the north of the application site having a relatively open, rural character.

2.10 Hill Street to the east is a quiet, rural lane, lined by a scattering of dwellings and a large nursing home (Colbury House). Beyond Hill Street, to the east, is Testwood Lakes.

2.11 South of Salisbury Road, Pauletts Lane extends southwards from the application site's south-eastern corner. The land to the south of Salisbury Road is still rural, but with a more enclosed character, including a small industrial estate at Brookes Hill (formed from the conversion of former agricultural buildings).

3 PROPOSED DEVELOPMENT

3.1 The application seeks the approval of reserved matters pursuant to Outline Planning Permission 20/10907, which was granted in January 2023.

3.2 The Outline Planning Permission is for up to 280 dwellings and associated infrastructure, including Alternative Natural Recreational Greenspace, informal and formal open space and drainage infrastructure. Under the Outline Planning Permission, detailed approval has been given to the means of access onto the highway network (Salisbury Road) and associated improvements to the highway.

The Outline Planning Permission is subject to 38 planning conditions, as well as detailed obligations secured through a Section 106 legal agreement.

3.3 This application seeks approval of all reserved matters - namely layout, scale, appearance and landscaping. The application covers the whole of the outline application site area except for those areas that are within the existing highway network or which form part of the already approved junction improvements, and where further reserved matters approval is unnecessary.

3.4 The application is specifically seeking detailed approval for 269 dwellings. The application is accompanied by a comprehensive set of plans and reports, including detailed site layout plans, detailed landscape drawings and a full suite of elevational drawings. The application has been the subject of lengthy negotiations since the application was registered in April 2023, resulting in the submission of a full set of amended plans. Unit numbers have reduced from 271 to 269 since the application was initially submitted, in part to address design concerns.

4 PLANNING HISTORY

Applications affecting the application site

4.1 Request for an EIA Screening Opinion under Regulation 6 of the Town & Country Planning Act (20/10464) - EIA not required 19/6/20

4.2 Outline planning application with all matters reserved, except means of access to the highway network (junction arrangements) and associated highway improvements, for the demolition of existing buildings and the residential (C3) development of the site with up to 280 dwellings, Alternative Natural Recreational Greenspace, informal and formal open space, together with associated drainage, utilities and all other associated and necessary infrastructure (20/10997) - granted 16/1/23

4.3 New agricultural compound comprising yard, hardstanding and erection of agricultural buildings (22/10943) - granted 28/6/23

Applications affecting the wider Strategic Site 1 allocation

4.4 Up to 80 dwellings at Loperwood; open space; drainage (Outline Application with all matters reserved) (15/11797) - refused 11/8/16; appeal allowed 29/9/17

4.5 Development of 80 dwellings at Loperwood comprised of: 19 detached houses, 20 semi-detached houses, 4 mid-terraced houses, 1 block 6 flats; detached garages; parking; landscaping; open space; bin & cycle stores; substation (details of access, layout, scale, appearance and landscaping development granted by Outline Permission 15/11797) (19/10703) - granted 22/10/20

4.6 Request for an EIA Screening Opinion in respect of a Development of up to 225 residential dwellings with gardens and off-road parking; Provision of public open space (POS) (approximately 2 hectares) and Alternative Natural Recreational Greenspace (ANRG) (approximately 4.8 hectares); Provision of a Local Equipped Area for Play (LEAP); Retention of existing vegetation (trees and hedgerows) including Bog Plantation (21/10564) - EIA required 16/6/21 (Appeal made. Secretary of State subsequently Directed that EIA is not required)

4.7 Request for an EIA Screening Opinion in respect of 80 residential dwellings with associated alternative natural recreational greenspace (ANRG), public open space, landscaping, means of access and ancillary infrastructure (Screening

Opinion) Strategic Site SS1 (20/10379) - EIA not required 4/6/21

4.8 Development of up to 196 Dwellings on Land North of Cooks Lane, including accesses from Cooks Lane and Pauletts Lane, provision of Public Open Space & Alternative Natural Recreational Greenspace and Drainage (Outline Application with details only of Access) (22/10219) - under consideration

4.9 Development of 9 dwellings on Land North of the Hollies, Hill Street; open car ports, access, hard and soft landscaping and associated works (22/10747) - under consideration but with resolution to grant planning permission subject to S106

4.10 Construction of 60 dwellings on Land West of Hill Street; creation of two new accesses from Hill Street, parking, landscaping, open space (including ANRG) and associated works (22/10854) - under consideration but with resolution to grant planning permission subject to S106

4.11 Development comprising 9 units at Brook House, parking, landscaping and access via existing enlarged entrance; retention and extension to Brook House to provide a two-storey rear extension (23/10540) - granted 7/8/24

4.12 Outline planning application at Calmore Croft Farm for the erection of up to 22,000 Sq.m of employment use for logistic/warehouses (Use Classes B2 and B8) and ancillary office space with all matters reserved except for access (24/10199) - under consideration

6 PARISH / TOWN COUNCIL COMMENTS

Netley Marsh Parish Council: Recommend permission but would accept the decision reached by NFDC officers under their delegated powers. The Access from Salisbury Road, the green space and play areas were considered to be good.

7 COUNCILLOR COMMENTS

No comments received

8 CONSULTEE COMMENTS

Comments have been received from the following consultees:

HCC Highways: No objection subject to condition.

Following a review of the proposed internal layout as shown in drawings A195-101 P6 and A195-102 P6, the Highway Authority are satisfied with the design in principle, subject to conditions. A number of points will need to be addressed at either the S38 detailed design stage (should the internal roads be offered for adoption) or by suitably worded conditions. Such conditions should require the technical details of highway design to be submitted and approved by the LPA in consultation with the Highway Authority. The following detailed points are made:

- Continuous footways/cycle tracks should be considered at side road junctions to facilitate the priority of people walking/cycling with respect to cars and to provide continuity, comfort and protection to people walking and cycling. Further review should be carried out at the detailed design stage.

- Corduroy paving where footways transition into shared use space/paths and all tactile paving crossing points should be shown throughout. Further details should be provided at the detailed design stage.
- Footway connections / crossing points should be provided at the private walkways from the dwellings at plots 61 and 66, as there is currently no footway to the side of dwellings.
- A surfaced path between the cul-de-sacs should be provided.
- It appears there are banking levels issues within the proposed footway adjacent to plot 250. The applicant needs to confirm how the footway will be constructed if there is a level difference.
- Full height kerbing is shown through the raised table. This should be amended.
- Turning heads at the end of estate roads should include either verge or footway margins.
- A shared use path from the north of site does not appear to connect to anything. The plans should show (at least indicatively) how the proposed adoptable footways/cycleways connect with the landscape paths throughout the site.
- The section of the spine road to the east of the ANRG junction has been designed almost straight. This could lead to an increase in the speed of traffic. Whilst it is noted that block paving is proposed for this section, this may not be sufficient to keep the speed down. Raised tables may also need to be considered.
- Maintenance access from the highway to the attenuation basins has not been shown. This should be clearly shown on the plan.
- The proposed adoptable highway encroaches onto a number of Root Protection Areas. Details of construction of the adoptable highways/paths at these points should be provided.
- The drawings have not shown the surfacing on the smaller cul-de-sac areas. This information should be included. Any parking/visitor bays should have hardstanding to the rear.
- The proposed 2.5m-wide shared use path on the southern side of ANRG is below the minimum width required in HCC's Technical Design Guidance. If 3m cannot be achieved, the applicant will be required to submit a Departure from Standard (DfS) application to the HA for approval. Approval is not guaranteed and, as such, it may result in the road not being adoptable.
- It is noted that block paving has been proposed for some sections of footway. The Highway Authority reject the use of block paving on footways as it is difficult to maintain and can therefore create trip hazards to pedestrians. As such, it may result in the road not being adoptable. The Highway Authority require this to be dealt with by a suitably worded planning condition which mandates that the detailed design of the footways, crossing points and shared use paths shall be approved by the planning authority in consultation with the Highway Authority prior to commencement of the development.
- No specifications are provided for kerbing. For the roads to be adoptable, the Highway Authority expect these to be PCC.
- Carriageway surfacing and construction need to be in accordance with HCC's guidance in order for the roads to be adoptable.
- It is unclear whether the headwalls and drainage infrastructure around the attenuation pond are within the highway boundary.
- The developer should be made aware that a subsequent S38 approval will require submission of additional information such as formal engineering drawings. This may result in updates being required which affect the approved layout.

HCC Surface Water: Advise that the drainage details required by the Outline Planning Permission are acceptable and that the relevant condition can be discharged.

HCC Minerals & Waste: No Objection. Advises that the north-eastern corner and a small area in the west of the application site lies within the Minerals and Waste Consultation Area (MWCA). This area is informed by the mineral safeguarding area (MSA) as defined through Policy 15: Safeguarding Mineral Resources of the adopted Hampshire Minerals and Waste Plan (2013) (HMWP) and indicates where viable, safeguarded mineral resources are likely to be present. However, it is confirmed the area of the application site within the MWCA would not constitute a viable extraction opportunity.

HCC Rights of Way: No objection subject to a condition requiring the applicant to enter into a S106 legal agreement to secure contributions that mitigate the development's impact on Netley Marsh Public Bridleways 1, 4 and 501.

The application proposes to create 3 metre wide paths for both walking and cycling, linking to bridleway 501 in the south-western corner and bridleway 4 in the south-eastern corner. The Service welcomes these links so as to provide opportunity for future residents to access the local PROW network and beyond.

Occupancy of the site will introduce many additional people to the area, many of whom will use bridleways 1, 4 and 501, seeking opportunities for recreation, etc. The Service considers parts of bridleways 1, 4 and 501 are already in need of surface improvement, in part caused by local flooding issues, and increased use will only increase their need for surface improvement.

HCC corporate practice is to secure financial contributions for the future maintenance of its highway assets, where development can reasonably be foreseen to increase the pressure on highway surfaces or other highway facilities. The Service will, therefore, require a commuted sum from the Applicant to both improve the present bridleway surfaces to reasonably accommodate the increase in use and to contribute to the Service's increased obligation in perpetuity.

The Service has identified the paths' surface improvement need as:

- Bridleway 1: 450 metres;
- Bridleway 4: 322 metres;
- Bridleway 501: 370 metres.

The charging schedule is reviewed regularly by the Service and the rate that would eventually apply would be that set at the time of the sealing of a suitable Section 106 legal agreement.

The Service suggests the Applicant could also provide an additional path link connecting the site and bridleway 1.

Natural England: No objection subject to appropriate mitigation being secured. We welcome improvements to the ANRG provision and support the Council's aims for this land to provide a truly attractive greenspace for recreation to protect the New Forest designated sites. We also note that the HRA should include details of the latest nutrient calculations and nutrient mitigation secured for the site to avoid adverse effects on the Solent designations. Standing Advice on protected species and ancient woodland / trees should be referred to.

Southern Water: Advice given.

No discharge of foul sewerage from the site shall be discharged into the public system until off-site drainage works to provide sufficient capacity within the foul network to cope with additional sewerage flows are complete. Southern Water is currently in the process of designing and planning delivery of off-site sewerage

network reinforcements. Southern Water seeks to limit the timescales to a maximum of 24 months from a firm commitment of the development. All other comments in the response to the outline planning permission remain valid.

National Grid Company: No objection

National Highways: No objection - the proposals are unlikely to have an unacceptable impact on the safety, reliability, and/or operational efficiency of the Strategic Road Network in the vicinity of the site.

Crime Prevention Design Advisor: Advice given on original plans only

Concerns are raised about access to the elevations of the dwellings / apartment blocks from the public realm. There are concerns that a number of dwellings have at least one elevation that can be easily accessed from the public realm, which increases the opportunities for crime and disorder. To reduce the opportunities for crime and disorder, defensible space should be provided along the exposed elevation(s). Considers that robust boundary treatments are needed and ground floor windows to apartments should be protected by planting. Hampshire and Isle of Wight Constabulary cannot support this application if the dwellings do not have this basic level of protection.

There are some concerns relating to rear garden access and access gates. Advises rear garden access gates should be fitted with a key operated lock that can be operated from both sides of the gate, and advises that some gates should be repositioned.

A number of Public Open Spaces (POSS) are located throughout the development. To provide for the safety of those using these spaces, planting needs to be carefully designed. Concern is raised that some of the footpaths and cycleways through the POS provide a shorter route across the development than using the roads which may encourage people to use a route that is less safe than using the road. To provide for the safety of those using these footpaths, they should be straight, at least 3m wide (metalled surface) and lit to the relevant standards with British Standard (BS) 5489-1:2020. As proposed, it is considered the connectivity in this development does not conform to Adopted Local Plan, Policy, ENV3, sub-paragraph iii.

Lighting throughout the development should conform to the relevant sections of British Standard (BS) 5489-1:2020.

NFDC Housing Initiatives Manager: No objection raised

The reserved matters application reflects the earlier commitment to the delivery of 35% (94 dwellings) of the site as affordable housing, with a broadly policy compliant ratio of Social Rent, Affordable Rent and Shared Ownership. The provision of a slightly higher number of social rented units is a positive.

The percentage of units by size and tenure differs slightly from the Affordable Housing Mix set out in the s106 agreement, resulting in a small reduction in the number of 1 and 4 bedroom units, and a corresponding increase in the number of 3 bedroom dwellings. It is also noted that the proposals have increased the number of 2 bedroom flats and decreased the number of 2 bedroom houses. The changes proposed do not raise a concern and will continue to meet an identified local affordable need.

The proposed residential layout plans indicate that the affordable housing will be provided in clusters across the whole of the site, which is welcomed.

NFDC Environmental Health (Contaminated Land): No objection but recommend a condition is imposed as per outline planning permission 20/10997. This is to ensure that any potential contamination that could pose risks to human health and/or the environment found during the proposed development on this site which was not identified in the previously submitted Geo-Environmental reports will be dealt with in accordance with the Environment Agency's technical guidance.

NFDC Environmental Health (Pollution): No objection or further comment. Having reviewed the Reserved Matters application and supporting documents, it is noted that there are no substantial changes from the outline application in matters that concern Environmental Health (pollution).

Archaeologist: No objection. This application follows on from Outline Application 20/10997 for which the applicant submitted a DBA, Geophysical Survey and a Written Scheme of Investigation (WSI) for an archaeological trial trench evaluation. This and any possible future archaeological work are secured by conditions on the granted outline planning permission. Does not see anything in this application that would require any additional work beyond what has already been secured.

NFDC Drainage: No comment. All surface water related considerations will be from HCC for this sized development.

NFDC Ecologist: No objection raised

Habitats – BNG

The previous BNG assessment undertaken using Biodiversity Metric (BM) 2.0 has been updated using version 3.1. Version 4.0 has subsequently been published. Either version is considered acceptable.

An updated commentary is provided in relation to additionality, which is agreed. It is not considered that this issue needs to be revisited, and no objection is raised to the completed and updated BNG Statement. This view has been reached, in part, due to demonstrable conservatism and application of a precautionary approach in completion of the metric - for example, not using urban trees.

It is noted that the proportion of 'other neutral grassland' shown as now being close mown has increased significantly over what was previously proposed. This appears to have been picked up in the condition assessments in the metric. From a pure biodiversity perspective, the previous proportions were favourable, though it is acknowledged this may not be desirable when considering all users / roles these areas have to fulfill. With these changes incorporated into the metric, the development still meets the requisite 10% BNG for area based habitats and linear habitats.

Species

A technical note completed by EPR titled Ecological Measures: Opportunities for Birds, Bats & Invertebrates has been submitted in support of the application. This includes provision for swift nesting bricks, bat boxes and bee bricks. The proposals are in keeping with the requirements of Planning Condition 17 of the Outline Planning Permission. If this was a full application being made now, or a new outline scheme, an average of one swift nesting feature and at least one bat roosting feature per house and apartment would be requested in line with emerging NFDC

policy. It is accepted, however, that the outline permission clearly sets out the expectations that were relevant at that time. As such, no objection is raised in this regard.

NFDC Arboriculture: No objection on tree grounds to the proposal. The applicant has submitted an amended Tree Protection Plan (Barrell Tree Consultancy Tree Protection Plan Ref: 18071-6). This plan shows the detailed layout of the site, with attenuation ponds and pedestrian path in relation to the tree constraints on site. It is confirmed that the submitted details do not conflict with the retention of the trees that have been identified in the original Outline application (20/10997). It is noted that Conditions 13 and 14 of the outline application 20/10997 are still outstanding.

NFDC Conservation: No comment

NFDC Urban & Landscape Design: Further response awaited and comments will be provided to Members in the written update paper. The scheme has improved in many ways over an extended period of discussion. The amended plans have been reviewed in terms of urban design quality. For the most part, the improvements are sufficient. There are many improvements, offering good public spaces and a largely well laid out development. The play areas designs are good. Most of the landscape design concerns have been met or can be made acceptable through a well worded landscape condition. Some detailed concerns raised.

NFDC Open Space: The aim must be to ensure that the POS is safe, welcoming and maintainable in the interests of all users and delivery of the mitigation functions. It is pleasing that many of the suggestions made previously in respect of the play areas have been taken forwards. It is recommended that the play areas have a boundary. Some adjustments are suggested in respect of specific details.

Health & Safety Executive: Do not advise against permission being granted.

9 REPRESENTATIONS RECEIVED

The following is a summary of the representations received:

9.1 1 letter of objection from local resident on the following grounds: loss of a valuable greenspace which is a much needed buffer between the A36 and the M27; adverse impact on the character of Hill Street; insufficient infrastructure to support the development.

9.2 Hampshire Swifts: Concerns raised and request that it be made a condition of planning approval that there should be at least one integral swift brick per dwelling.

In their ecological proposals for this application Bloor Homes' contract ecologists EPR say that 36 swift bricks (integrated swift boxes) will be included. This equates to only 13% of the 271 planned dwellings. This is far below current best practice recommendations. Conservation organisations and the British Standard BS 42021:2022 Integral nest recommend at least 1 integral swift box per dwelling.

Continued loss of traditional nesting sites in existing buildings means there is a huge need for permanent integral nest boxes in new developments for Swifts and other cavity nesting birds. Without integral nest boxes, these species, that have nested in our homes for centuries, will never be able to nest in the proposed buildings because modern building techniques exclude them.

10 PLANNING ASSESSMENT

Principle of Development

10.1 Being an application for the approval of reserved matters, the principle of development has already been established through the approval of the Outline Planning Permission for up to 280 dwellings in January 2023.

10.2 However, as with any application for the approval of reserved matters, it is necessary to consider whether the proposal is consistent with the description and the requirements of the outline planning permission, having regard to relevant conditions and Section 106 obligations.

Compliance with the Outline Planning Permission

10.3 In this case, the application is for 269 dwellings - 11 fewer than the maximum number of dwellings permitted under the outline planning permission. The number of units proposed is therefore consistent with the number of units approved under the outline planning permission and is entirely acceptable.

Compliance with Conditions

10.4 The Outline Planning Permission was subject to 38 conditions. This included a number of conditions that required the reserved matters application(s) to adhere to specific parameter plans and requirements.

10.5 Condition 4 of the outline planning permission requires the reserved matters proposals to accord with 3 parameter plans. In almost all respects, the submitted reserved matters application does accord with these 3 parameter plans. The access arrangements accord with the approved access strategy, whilst the areas of built infrastructure and green infrastructure are in accordance with the approved Land Use and Access Parameter Plan. There is, however, one departure from the Trees, Hedgerows and Demolition Parameter Plan. That plan showed an oak tree close to the existing farm buildings as to be retained, and the illustrative masterplan showed a layout with a greenspace centred around that tree. However, before the reserved matters application was submitted, the tree was felled (it is understood by the landowner following storm damage to the tree). This felling of this tree means that any reserved matters application is unable to comply with this one element of the approved Trees, Hedgerows and Demolition Parameter Plan. Given this tree is just one small and minor element of the parameter plans, and given the proposal satisfies condition 4 of the outline planning permission in all other respects, it is felt that it would be acceptable to consider a reserved matters application on the basis of this tree having been removed.

10.6 Condition 6 of the outline planning permission requires the layout and landscaping details of the development to be broadly consistent with the design principles and strategy that are shown on the illustrative Landscape & ANRG Framework Plan - 8956-L-01 F. It is considered that the proposed reserved matters application would be consistent with the requirements of this condition. The areas of proposed green landscape infrastructure would broadly align with the illustrative landscape & ANRG Framework Plan. This said, it is recognised that there would be some changes: notably following the removal of the oak tree close to the existing farm buildings (as described in the preceding paragraph), it is no longer proposed to create an area of green infrastructure focussed around this tree. And the position of the children's play areas has been subject to adjustments. However, these changes are not considered to be fundamental in the context of the overall Landscape and ANRG Framework Plan.

10.7 Condition 7 of the outline planning permission requires the development to substantially accord with a specific residential mix - reflecting the Table at Figure 6.1 of the Local Plan - with different mixes being defined for affordable rental homes, affordable homes ownership and market homes. The submitted mix of affordable rental homes would include a slightly greater proportion of 3-bedroom units and a slightly lower proportion of 4-bedroom units than set out in the condition, but the deviation would be marginal, and the mix of affordable rental homes would therefore be reasonably consistent with the requirements of the condition. The submitted mix of dwellings that would be for affordable homes ownership would also be consistent with the requirements of the condition. With respect to the open market housing, the reserved matters scheme would include a slightly lower proportion of 2-bedroom units and a slightly higher proportion of 4-bedroom units than the expected proportions set out in the condition (the difference being about 3% in both cases). It is felt that this level of change would be within acceptable tolerances, given the requirement is to 'substantially accord' rather than to 'precisely accord'. Overall, therefore, it is considered that the proposed mix of the different tenures of dwelling would be consistent with the requirements of Condition 7 of the outline planning permission.

10.8 Condition 17 of the outline planning permission requires a minimum of 1 in 4 of the dwellings / development plots to incorporate either a bird nesting box, a bat box or enhancements for invertebrates such as bee bricks. The applicant has provided a report with plans which shows where these features would be provided across the development. In total, there would be 36 bird nest boxes, 28 bat boxes and 22 bee bricks across 68 of the proposed 269 dwellings -i.e. just over 25% of dwellings. As such, it is considered that the applicant's proposals are an acceptable response to the requirements of this condition.

10.9 Condition 19 of the outline planning permission requires this Reserved Matters application to be accompanied by an additional Biodiversity Net Gain Statement, which shall include a recalculation of the biodiversity impact of the proposed development based on the detailed proposals. Accordingly, such a statement has been submitted. This statement indicates that the development would achieve a 14.99% uplift in habitat units and a 27.23% uplift in hedgerow units. These increases in biodiversity would be achieved by concentrating development within the parts of the site that have a very low baseline for nature conservation value, and also through the provision of a substantial resource of new and enhanced habitats, including an expanse of semi-natural grassland, diversified with scrub planting and framed by hedgerows. It should be noted that the habitat gains are more modest than had been suggested at outline stage, partly due to the detailed designs giving greater priority to the recreational function of the ANRG and POS areas. Nevertheless, the Council's ecologist is satisfied that the minimum 10% uplift in biodiversity would be achieved through the Reserved Matters designs. Therefore, the requirements of Condition 19 of the outline planning permission are considered to be satisfied.

10.10 Condition 30 of the outline planning permission requires this reserved matters application to include details of any mitigation measures that will be implemented to ensure an acceptable relationship between the existing gas pipelines across the development and the proposed development. The application is duly accompanied by a Gas Pipeline Note and accompanying plan. The Note confirms that there are 2 gas pipelines running across a section of the northern part of the site (one high pressure pipeline and one intermediate pressure pipeline). Southern Gas Networks have previously confirmed that there should be no building within 7 metres of the high pressure pipeline or within 3 metres of the intermediate pressure pipeline. Related to this, the Health and Safety Executive have defined consultation zone

distances in respect of the high pressure gas pipeline, whereby they would advise against permission being granted if dwellings were to be sited within 9 metres of the pipeline. Plots 170 and 171 would be the nearest 2 dwellings to the pipeline, but they would be situated outside of the critical distances. Therefore, the siting of the dwellings would be acceptable in terms of their relationship to the pipeline. It should be noted that some landscape works are proposed within the relevant gas pipeline area, but the submitted Note indicates that these can be provided without affecting the pipeline, whilst recognising that risk assessments and method statements would need to be agreed with Southern Gas Networks outside of the planning process. As such, it is felt that the Reserved Matters application satisfactorily addresses the requirements of Condition 30 of the outline planning permission. (It should be noted that Southern Gas Networks were consulted on the application but have not provided a formal consultation response.)

10.11 Condition 33 of the outline planning permission requires car and cycle parking details to be submitted and agreed in connection with this reserved matters application. In this respect, the application is accompanied by a parking and cycle strategy plan. Across the development, this plan confirms there would be 498 allocated parking spaces, 12 unallocated parking spaces, 83 garage parking spaces, 13 car port / car barn spaces, 54 visitor parking spaces, communal cycle stores for the apartments within the development and cycle storage sheds for all dwellings without garages.

10.12 Based on the Council's parking standards Supplementary Planning Document (SPD), the development as a whole should provide 646 car parking spaces. If both garages and visitor parking spaces are included, the total car parking provision would be 660 car parking spaces, which would be slightly in excess of the recommended level. The Council's parking standards SPD does confirm that visitor parking can count as part of the overall parking allowance, whilst also indicating that garages need to be considered on a case by case basis. Accordingly, in this case, whilst a proportion of the garages are likely to be used for purposes other than the parking of cars (thereby impacting upon the total car parking provision), it is not felt this would have the effect of reducing car parking provision to a level that would be harmful in either safety or visual amenity terms. Therefore, the overall level, type and distribution of car parking spaces is considered to be acceptable. The quantum and distribution of proposed cycle parking also meets relevant standards and is considered acceptable.

10.13 Condition 34 of the outline planning permission requires details of electric vehicle charging infrastructure / points to be submitted with this reserved matters application. The application is duly accompanied by an EV charging plan, which shows that every dwelling would have its own EV charging point. As such, it is considered that the reserved matters permission satisfied the requirements of condition 34 of the outline planning permission, noting that the provision of EV charging infrastructure is now more normally required and secured through the Building Regulations.

10.14 Condition 37 of the outline planning permission requires a waste collection strategy to be submitted and approved in connection with this reserved matters application. The application is thus accompanied by a plan which shows the location of communal bin stores for the apartment blocks (2 in total) and a number of dedicated bin collection points scattered around the development (21 in total). These are considered to be appropriately sited across the development. The collection points are marked on the plans as small slab areas. From a design perspective, they would benefit from clearer definition. This is a fairly minor detail, however, that could be secured by condition.

10.15 A number of other conditions of the outline planning permission are the subject of related applications to discharge conditions. These include Condition 8 (levels), Condition 13 (protection of trees), Condition 14 (Footpaths and Walkways within Root Protection Areas), Condition 20 (Pedestrian Connections), Condition 21 (Lighting Scheme), Condition 22 (Surface Water Drainage), Condition 24 (Foul Water Drainage), Condition 25 (Noise), Condition 26 (Construction Environmental Management Plan), Condition 28 (Construction Traffic Management Plan), and Condition 32 (Nutrient/Nitrate Neutrality). These will all be the subject of separate decision notices. However, many of the details are inextricably linked to the reserved matters proposals, and can therefore only be approved in conjunction with the approval of any reserved matters application. As such, it is relevant to note what details have been submitted to discharge the conditions and how these details link to this reserved matters application.

10.16 With respect to condition 8 (levels), the engineering plans with this reserved matters application provide full details of existing and proposed levels across the site. There are material level changes across the site such that the dwellings on the highest part of the site (in the north-east corner) would be almost 9 metres higher than those on the lowest part of the site (in the south-east corner). This inevitably affects the layout and design as is discussed later in this report. However, in terms of the condition requirement, it is considered the scheme responds to level changes in an appropriate manner.

10.17 With respect to conditions 13 & 14 (trees), there is currently still a need for further details to be approved. However, in terms of this Reserved Matters application, the key is to have an acceptable tree protection plan that reflects the proposed layout. Such a plan has been submitted, although precise impacts will need to be assessed further through the requirements of the 2 conditions.

10.18 Condition 20 of the Outline planning permission requires details of pedestrian connections to Green Lane and other adjacent parts of Strategic Site 1 to be agreed to ensure there is appropriate connectivity across the strategic site, particularly in respect of ANRG and green infrastructure. In this regard, the reserved matters proposals show 3 separate pedestrian connections to Green Lane, 2 to Hill Street, 1 to the 9 dwelling scheme south of Carnoustie House and one to the Public Right of Way in the south-western corner. There should also be connectivity to public open space on the 9 dwelling Brook House scheme. Some of the precise boundary details require further clarification, but in terms of this reserved matters application, it is showing connections in appropriate locations and is thus consistent with the expectations of condition 20 of the outline planning permission.

10.19 With respect to condition 21 (lighting post occupation), details have been submitted through a discharge of condition application. The purpose of the condition is primarily to minimise impact on bats. The lighting design and spill lines demonstrate that lighting impacts will be acceptably minimised so as not to adversely affect foraging bats.

10.20 With respect to condition 22 (surface water drainage), Hampshire County Council as the Lead Local Flood Authority have confirmed that the detailed drainage arrangements (which are based on the drainage strategy agreed through the outline planning permission) are acceptable and meet with current standards.

10.21 With respect to condition 24 (foul drainage), Southern Water have confirmed they are currently in the process of designing and planning delivery of off-site sewerage network reinforcements. These will need to be progressed before the relevant condition can be discharged, but this is not considered to be an impediment to approving this reserved matters application.

10.22 With respect to condition 25 (noise), there are some ventilation details that still need to be clarified to ensure all houses have suitable internal living environments. However, these are more technical details which are not considered to have a bearing on the overall site layout or the appearance of the dwellings.

10.23 Conditions 26 and 28 (Construction Management Plans) are consistent with the proposed layout.

10.24 Condition 32 (nutrient mitigation) needs to be related to the reserved matters application insofar as it must relate to the proposed mix. This condition will need to be discharged after the Reserved Matters application is determined - when the mix is fixed.

Compliance with S106 Obligations - Affordable Housing

10.25 The S106 to the outline planning permission requires that 35% of the dwellings within the development be for affordable housing. In total, 94 of the 269 dwellings that are proposed would be for affordable housing. This equates to 35% and so would be consistent with the requirements of the Section 106 legal agreement.

10.26 The S106 also requires that the affordable housing units are in accordance with the Affordable Housing Tenure Mix - which (reflecting Local Plan policy) requires 35% of the affordable units to be for social rented dwellings, 35% for affordable rented dwellings and 30% for intermediate housing (shared ownership). The submitted reserved matters application proposes 36 social rented dwellings (38%), 30 affordable rented dwellings (32%) and 28 shared ownership dwellings (30%). This means that the application is proposing a slightly greater proportion of social rented dwellings and a slightly lower proportion of affordable rented dwellings than is required by the S106 legal agreement. In terms of meeting local affordable housing needs, this relatively minor deviation from the requirements of the S106 is not considered to raise any concern, and is therefore something that can be accepted.

10.27 The S106 additionally requires the 3 different tenures of affordable housing to adhere to a more detailed affordable housing unit mix - covering 1 bed 2 person flats, 2 bed 3 person flats, 2 bed 4 person houses, 3 bed 5 person houses and 4 bed 6 person houses. The submitted reserved matters application broadly follows the mix specified within the legal agreement, but there are some deviations. So, with the 2 rental tenures, there is a slight reduction in both 1-bed and 4-bed units and a corresponding increase in the number of 3-bedroom dwellings. And for the 2-bedroom units, there is an increased proportion of flats relative to dwellings than what was specified in the affordable housing unit mix. However, the S106 allows for some flexibility in the way the affordable housing unit mix is applied. The Council's Housing Initiatives Manager has confirmed that the changes do not raise a concern and that the proposal will continue to meet a local affordable housing need. In these circumstances, the proposed mix of the 3 different tenures of affordable housing is considered to be reasonable and acceptable.

Compliance with S106 Obligations - ANRG and Public Open Space

10.28 With respect to ANRG provision, the S106 requires that the development provides 8 hectares of ANRG per 1000 population. For informal public open space, the required provision is 2 hectares of informal public open space per 1000 population; and for children's play areas, the requirement is 0.2 hectares of children's play space per 1000 population.

10.29 Based on the proposed dwelling mix, this means that the reserved matters submission must provide a minimum of 5.94 hectares of ANRG, a minimum of 1.48 hectares of Informal Public Open Space, and a minimum of 0.19 hectares of children's play space. Were formal public open space being provided (which is not the case), then the requirement would be for 0.93 hectares of formal public open space.

10.30 As required by the S106, the application is accompanied by an ANRG Land Plan and a Public Open Space Land Plan. The ANRG Land plan defines 6.16ha of the site that would be ANRG, whilst the Public Open Space Land Plan defines 3.13ha of the site that would be public open space (including children's play areas). The 4 children's play areas would extend to approximately 0.24 hectares. As such, the necessary quantum of ANRG, Public Open Space and children's play area would be achieved. The layout and quality of these areas is considered further in the assessment below.

Reserved Matters - Policy Overview

10.31 In considering the scheme's layout, scale, appearance and landscaping, it is necessary to be particularly mindful of Policy ENV3 of the Local Plan - which requires new development to create buildings, streets and spaces which are sympathetic to the environment and their context in terms of layout, landscape, scale, height, appearance and density and in relationship to adjoining buildings, space and landscape features. Layouts should be accessible, safe and easy to navigate, minimising opportunities for anti-social and criminal behaviour. Car and cycle parking should be integrated in a way that is not prejudicial to the character and quality of the street. Design measures that improve resource efficiency and climate change resilience should be incorporated where appropriate (this would include SUDs). Appropriately designed greenspace that includes sufficient planting should be provided. And buildings, streets and spaces should be attractive to look at through good architecture, landscape and street design.

10.32 The application must also be considered in the light of the masterplanning objectives detailed in Policy Strategic Site 1 of the Local Plan, as well as national planning policy guidance. Section 8 of the National Planning Policy Framework (NPPF) is particularly pertinent, noting that decisions should aim to achieve healthy, inclusive and safe places and beautiful buildings.

Layout of Development

10.33 Inevitably, the layout of the development is informed by the parameter plans approved as part of the outline planning permission and the 2 access points approved onto Salisbury Road.

10.34 Nevertheless, on a scheme of this size, the quality of the layout does come down to some of the finer detail. This detail has been the subject of lengthy negotiation since the application was initially submitted, resulting in the submission of various amended plans to address initial concerns.

10.35 In the very broadest terms, the layout consists of 2 residential development areas that are separated by the central ANRG landscaped spine that extends from Hatton's Plantation up to the northern edge of the site. The 2 large residential areas are made up of a number of smaller perimeter blocks. Whilst at one level, there is considered to be a consistency of character that would bind the development together, there is also variety that would be responsive to the site's context and which will help to build a sense of place. Thus, along the site's northern edge, the

houses are detached units that are more generously spaced than some of the areas within the site. This means that there is a lower density of development along this northern edge than elsewhere within the development, which ensures this sensitive edge with the rural landscape beyond is not too harsh or urban. There is also more generous spacing along the central ANRG corridor and fronting onto drainage attenuation features within the development, which helps the development to respond to its landscape context. Away from these edges, there are areas of higher density which provide focus to parts of the development, but which are suitably softened by key areas of public realm such as a wide, green link to the east of Plots 212-222. There is also an area of more intense development at the main entrance to the site, where a collection of taller and more connected buildings are grouped around a key public greenspace. The layout here is considered to provide a strong character to the entrance, with the greenspace providing the necessary spatial focus.

10.36 The layout incorporates a central spine road that runs through the site from the main junction with the A36 through to the north-eastern parts of the site. A number of no-through access roads and cul-de-sacs would link into this main central section of road. A secondary linking road would provide alternative / additional access to those units that are closest to the secondary access onto Salisbury Road. The street layout includes 3 distinct focal spaces where block paving is proposed to define the road surface and thus give definition to these spaces. These focal spaces would be sited at the main entrance, on the secondary entrance road opposite Hatton's Plantation and within the centre of the development (in the vicinity of Plots 194-201). Together, they would provide important definition to the street and legibility to the overall layout and design.

10.37 Houses within the development would typically have small front garden spaces in the form of narrow, landscaped strips that would provide a private, defensible area between the dwellings and the street. However, some dwellings would have a greater setback from the street to allow for parking to be provided in front of those dwellings, broken up by landscaping and street trees. In this way, it is considered that the streets within the development would have a sufficient variety of set back and would achieve an appropriate balance between built-form and spatial setting.

10.38 Rear gardens within the development would typically be 10-11 metres in depth, although particularly along the northern edge there are some dwellings with deeper gardens. Individually and collectively, the rear garden spaces would offer appropriate amenity for future occupants and sufficient areas of greenery within the perimeter blocks. In some instances, garages would encroach into the rear garden setting, but never to a degree that would compromise the amenity value of these areas.

10.39 The flatted blocks within the development include parking courtyards, and the dwellings on plots 225-232 are also served by a parking courtyard. Some of these areas provide connectivity through the site, and all are considered to be landscaped and overlooked in a way that should ensure they are good quality spaces.

10.40 Inevitably, the main spine road through the site has to cross the Central ANRG space. It does this in a suitable location, where impact on existing trees would be minimised. However, there has always been a concern that the design of this road crossing of the ANRG needs to be done well and sensitively, so as to ensure that the road is not perceived as a barrier to those using the ANRG, and also to ensure it does not undermine the visual qualities of the ANRG. To address this concern, the application is proposing a narrowing of the road in this location, surface

material changes and suitable definition to this crossing so that drivers slow down and are aware of pedestrian users (potentially with their dogs). Through these design measures, it is considered that the proposed road crossing is sufficiently responsive to the function of the ANRG.

10.41 The application includes 2 agricultural access points that would provide access to the agricultural land beyond the site. One of these would be sited north of Plots 128 and 139 and the other would be sited north of Plots 164 and 165. The need to maintain suitable agricultural access was always anticipated through the outline planning permission. The western access point between plots 128 and 139 is expected to be the more significantly used access because it would provide access to replacement farm buildings (yet to be constructed) to the north of the site; the easterly agricultural access is only expected to be used more occasionally. Nevertheless, both accesses are shown to be finished with a reinforced grass surface and would be about 6 metres wide. In landscape terms, it is considered that these access points have been designed in an appropriate way that would work alongside adjacent pedestrian paths and access. However, a 10 metre wide strip where each agricultural access is proposed is shown to be excluded from the Public Open Space Land which extends either side of the 2 agricultural accesses. This raises a potential concern because the accesses then have the potential to be a barrier to unrestricted public access to the green infrastructure that extends along the full length of the northern edge of the site. To address this concern, there needs to be an addendum to the S106 legal agreement accompanying the outline planning permission, with the effect that there must be no impediment to pedestrian public access across the 2 agricultural access areas. This addendum is currently in the process of being finalised.

10.42 The affordable housing would be set in a number of small clusters that would be distributed right across the development. As such, it is considered that the affordable housing would be distributed in an acceptable way and in a manner that would be sufficiently integrated with the open market housing.

10.43 Overall, the layout of the proposed development is considered to be responsive and appropriate to its context. There is a strong green infrastructure that permeates the development, which the built form embraces. The result is an attractive and well-designed layout, which should provide good amenity for future occupants. As such, it is considered the layout is consistent with the design expectations of Policy ENV3 of the Local Plan. The proposals would also successfully create an integrated network of natural greenspace as required by Policy Strategic Site 1 of the Local Plan.

Scale of Development

10.44 The proposed dwellings would be predominantly 2-storeys high. Specifically, 220 of the 269 dwellings would be 2-storeys high. A further 30 dwellings would be 2.5-storeys high (with dormers set into roofs), whilst 15 units (2 flatted blocks) would be 3-storeys high. A group of 4 single-storey bungalows are proposed along one section of the northern edge of the site.

10.45 It is considered that the predominantly 2-storey scale is appropriate to the site's context. With respect to the taller 2.5 and 3-storey units, these are largely clustered in groups, such as around the greenspace at the main entrance to the development and within focal points of the site in areas where there is a deliberate intent to create a slightly higher density (in contrast to some of the edges). 2.5 storey buildings have also been used to frame and provide emphasis to certain street views. It is considered that these taller buildings add visual interest and variation without appearing unduly dominant. The 3-storey flatted block at the main

entrance to the development will be a prominent feature looking onto the new roundabout, but in conjunction with the other taller buildings around the entrance focal greenspace, it would serve to provide a strong, legible entrance to the development. In the context of the wider strategic site 1 allocation and the expected change to surrounding areas, the scale of this block is considered appropriate.

10.46 Importantly, from a landscape perspective, there are no 2.5-storey or 3-storey buildings along the site's sensitive northern edge, which is the highest and most open part of the site. Indeed, the very highest point of the site where dwellings are proposed is where the group of 4 bungalows are proposed. This therefore assists in ensuring the visual impact of development along this northern edge is not too intrusive or dominant. And, in so doing, it helps to ensure the development meets the masterplanning objectives for the site's northern edge, as set out in Policy Strategic Site 1.

10.47 Scale is not just about height, but it is also about the overall size of the buildings. The development includes a broad mix of building sizes, including detached units, semi-detached units, terraces of 3, a couple of terraces of 4, as well as some flats above garages and the 2 main flatted blocks. This variety is considered appropriate from both a mix and design perspective. The size of the buildings is considered appropriate both contextually and in terms of the spatial setting afforded to those buildings. As such, it is considered the scale is consistent with the design expectations of Policy ENV3 of the Local Plan.

Appearance of Development

10.48 The development is comprised of a number of different house types. This provides necessary variety. At the same time, the different house types are complementary to one another, thereby helping to create a sense of place. The 3-storey flatted block at the main entrance to the development is an attractively proportioned building of a bespoke design that would add a strength of character to the main entrance.

10.49 To emphasise key spaces and building groups, and to give the development legibility, the dwellings have been designed to fit within a clear building hierarchy. As such, those buildings grouped around the main entrance, as well as those framing the secondary entrance, fronting the northern edge, and sited at key strategic points within the site, have been given an elevated status. This would be largely achieved through richer detailing, including the addition of chimneys, stronger porch features, arched window heads, additional brickwork detailing and enhanced materials such as the use of tile hanging or weatherboarding. This will help to lift the design at key focal points and along important frontages, and is considered important in ensuring the development as a whole is of an appropriately high design quality.

10.50 The key material across the development would be red brick, which contextually would be entirely appropriate. The materials plan suggests 3 different types of red brick would be used across the development - enough to provide variety without undermining a sense of cohesiveness. 3 different colour roof tiles are also proposed. The use of tile hanging and weatherboarding on some of the buildings with a more elevated status (as referred to above) would provide necessary contrast, as would the use of render, which would be deployed on a relatively small proportion of the units. No render (which would stand out somewhat) is proposed for the groups of dwellings along the sensitive northern edge.

10.51 The Council's Urban Design Officer has raised a concern with the design of the 3-storey flatted block at Units 212-220. Amendments have been made to this building to improve its appearance, and within the context of the wider development,

its appearance is considered acceptable. The Council's Urban Design Officer has also raised a concern that some of the backs of dwellings show less attention to detail than the fronts. Again, this concern has resulted in the submission of amended plans, so that for more visually prominent or significant plots, elevational detailing has been enhanced from what was originally proposed. With these amendments, it is considered that the proposed detailing deployed on different elevations would be acceptable.

10.52 The dwellings as a whole would have appropriate visual interest and would be acceptably proportioned. Importantly, dwellings on corner plots have been designed so as to have active frontages and appropriate visual interest on both street elevations that would be faced. The dwellings would also actively engage with the various greenspaces that would permeate the development. Overall, therefore, it is considered the appearance of the development is consistent with the design expectations of Policy ENV3 of the Local Plan.

Landscaping of Development

10.53 The application is accompanied by a set of detailed landscaping plans. These cover both on-plot landscaping and landscaping of the areas of public realm. As with the overall layout plans, these plans have been the subject of detailed negotiation during the course of this application and various amendments have been made to address initial concerns.

10.54 The application is accompanied by a hard landscaping plan that shows the surface treatment for the non-adoptable sections of road (i.e. the shared private drives serving dwellings at the end of cul-de-sacs), the communal courtyards, the private driveways and related pedestrian access routes. A suitable mix of tarmac, block paving and paving slabs is proposed, although precise material details should be secured through a planning condition.

10.55 The application is also accompanied by a landscape plan that shows the proposed boundary treatments within the site. Where key public green spaces abut the highway, knee rail fences are proposed in a number of locations in order to protect the green spaces from inappropriate parking. 1.2 metre high timber post and rail fencing is also proposed to separate vehicle turning heads and sections of the highway from adjacent areas of greenspace. Meanwhile, post and wire fences are proposed between access areas and adjacent public greenspaces where there is a need to assist hedgerow establishment along these boundaries. Together, it is felt that these various boundaries are of an appropriate design and will provide appropriate definition to the areas of public green infrastructure, protecting them from inappropriate car encroachment.

10.56 Private rear garden areas that are on corner plots and/or which are more visible within the public realm are proposed to be enclosed by 1.8 metre high brick walls. Likewise, the parking courtyard areas within the site are proposed to be enclosed by 1.8 metre high brick walls. This will ensure that these more visible boundaries are of the necessarily high design quality. The sides of private rear gardens would typically be enclosed by 1.8 metre high timber panel fences and the rears (where not readily visible from the public realm) would be enclosed by 1.8 metre high close-boarded fencing, which would be acceptable in these less publicly visible parts of the site. It should be noted that there are material level changes across some of the perimeter blocks, which would necessitate higher rear boundaries in certain locations. Whilst some sections have been submitted during the course of the application, it is considered more precise details need to be submitted and agreed (through condition), so that there is clarity on the way these boundaries will be treated.

10.57 The application is accompanied by a series of plans showing on-plot landscaping - primarily covering front gardens and (on corner plots) side gardens. These details have been assessed by the Council's landscape team and they are considered to provide the necessary landscape quality to the streetscapes, as well as securing appropriate definition to front garden spaces.

10.58 Careful consideration has been given to the landscaping of the areas of public green infrastructure. Significant areas of new planting are proposed within the Public Open Space and ANRG along the northern edge of the site. This planting will add considerable landscape and ecological value, will help to define individual spaces and will frame views through the site and beyond, all of which would be consistent with policy objectives for the Strategic Site. The Council's landscape officer is satisfied with the various new trees and planting mixes and how they are deployed.

10.59 The application proposes a network of granular hoggin paths through the green infrastructure, as well as a number of mown grass paths. These would provide attractive walking routes through the green infrastructure, and suitable connectivity for pedestrians / dog walkers across the site. An appropriate number of seats / benches would be distributed across the green infrastructure, allowing people to sit and enjoy these areas. Within Hatton's Plantation, a new pedestrian path is rightly shown (to ensure the space is useable ANRG Land). However, the exact route of this has yet to be surveyed, and therefore the precise detail of this route will need to be clarified as a condition of any approval.

10.60 The application includes 2 drainage attenuation features either side of Hatton's Plantation. Both form part of the defined ANRG land, and both are significant features which need to be of a good landscape value and provide suitable amenity. The drainage attenuation basin to the south of Hatton's Plantation, in the south-eastern corner of the site would include a permanently wet area (pond). There would be pedestrian walkway all around this feature, either in the form of a hoggin path or raised decking, including a viewing platform over the permanent pond area. Suitable landscape planting is proposed within and around the feature, which would be graded so as to give a relatively natural character. Overall, it is considered this would be an attractive landscape feature within the development with necessary levels of access given its ANRG function. The drainage feature to the north of Hatton's Plantation would be a much drier basin, with no permanently wet areas. It has been designed to allow access into the basin and would incorporate step seats around some of the edges. The landscape design of this feature has appropriate visual and amenity interest.

10.61 The application proposes 4 distinct play areas across the site within the Green Infrastructure. There is a central play area across the central ANRG space, which would include a bridge crossing. There would be 2 larger play areas within the green infrastructure along the northern boundary: one within the public open space in the western corner of the site and the other within the north-eastern part of the site. A much smaller play area is proposed within the south-eastern part of the site between Units 44-46 and Hatton's Plantation. The play areas have been the subject of detailed negotiation to ensure they offer the right balance and diversity of play opportunity for children of different ages, and also to ensure that they are appropriately located and distributed. The Council's design/landscape team consider that the designs really embrace the principles of landscape in play, creating diverse and attractive places that should be fun to be in. The play areas have been designed to work with the landscape through careful design and suitable new planting, which would include hedgerow planting between the play areas and adjacent footpaths to provide necessary definition and separation from dog walkers. Collectively, the play

areas would provide the necessary children's play opportunities for a development of this scale.

10.62 Taking the ANRG and Public Open Space areas as a whole, the landscaping serves to provide some distinct spaces, which should prove attractive for recreational users of these spaces. Within the north-easternmost section of the site, adjacent to Hill Street, is an area that would be enclosed with the purpose of providing an off the lead dog exercise area. That is not to say that dogs could not be walked off lead elsewhere, but as a dedicated area, such as feature would help to ensure the ANRG as a whole is successful in mitigating recreational impacts on protected New Forest habitats.

10.63 It is important that the ANRG and Public Open Space provide biodiversity enhancements, which would be the case with the new landscaping that is proposed. The north-eastern section of the site is an area of grassland with some existing biodiversity value. Although, as referenced in the preceding paragraph, this would be encouraged as an off the lead dog area, the plans indicate that the area would still be managed (in part) for grassland biodiversity (by a Management Company). Ultimately, a balance has to be struck between promoting the recreational function of these areas and safeguarding existing ecological interests whilst delivering Biodiversity Net Gain. It is considered the scheme achieves an acceptable balance, meeting all necessary objectives.

10.64 Overall, it is considered the landscaping across the development is of a high quality and will help to ensure that the development's design is sympathetic to its context. As such, it is considered the landscaping is consistent with the design expectations of Policy ENV3 of the Local Plan and the Masterplanning objectives of Policy Strategic Site 1.

Neighbouring amenities

10.65 The only 2 properties with a common boundary with the application site are Four Winds and Brook House, which both lie to the west of the proposed residential area. In considering the impact on Brook House, there is a need not just to consider the relationship to the existing dwelling but also to a recently approved scheme of 9 dwellings within the garden curtilage of that property.

10.66 There would be significant new development adjacent to the eastern boundary of Brook House. Many of the proposed dwellings, however, would be set well back from the boundary, meaning they would not adversely affect the amenities of either Brook House or the newly approved dwellings. The most significant impact would arise from the proposed 3-storey block of flats (Units 96-101), an associated 2-storey wing (units 102-103), and a related car barn due to their closer proximity to the boundary, and, in the case of the block of flats, due to its scale. Brook House itself would be more than 30 metres away from the proposed block of flats, which would be an acceptable degree of separation. More affected would be one of the approved but unbuilt dwellings (known as unit 1). However, the lower 2-storey wing (units 102-103), which faces Unit 1 on the Brook House development most directly, has no rear windows, so there would be no overlooking from this building. Plots 96-101 do, have windows to the side, but these would primarily overlook an area of public open space on the Brook House development and not private rear garden, and so the overlooking from these windows is considered acceptable. Some views from the rear elevation of Units 96-101 to Unit 1 on the Brook House development would occur, but, on balance, it is considered the angle of overlooking would be sufficiently oblique as to be acceptable, having regard as well to existing trees (mainly sycamore) and vegetation on the boundary, which would provide a visual buffer that would help to soften the visual relationship between the 2 developments.

10.67 In terms of light and outlook, units 102-103 would be about 13-14 metres away from the rear of Unit 1 on the Brook House development. It is not considered this would be an overbearing relationship. Again, due to their greater scale, Units 96-101 would be clearly appreciated from the rear aspect/garden of the house on unit 1, but given the relative orientation between the 2 plots, it is not considered that Plots 96-101 would be overbearing in their impact. The related car barn would be set closer to unit 2 on the Brook House development, but being a lower building without fenestration, it is considered that it would have an acceptable relationship to the Brook House development. Overall, therefore, it is considered the development's relationship to the Brook House development is an acceptable one.

10.68 The property Four Winds would be bounded by public open space, with one of the proposed play areas being sited about 25 metres away from the dwelling (but closer to parts of its garden). However, there would be relatively good screening between the 2 properties, and therefore, visually, it is considered there would be an acceptable relationship between the proposed development and Four Winds. In terms of noise, use of the play area will evidently generate some noise but not to a degree that would be unacceptably harmful.

10.69 Distances to other existing and approved developments to the east side of the site would be well in excess of anything that would be of concern from an amenity perspective. Overall, therefore, it is considered the proposal is consistent with the amenity related expectations of Policy ENV3 of the Local Plan.

Highway considerations

10.70 Whilst many of the key transportation issues were considered at outline stage, there is still a need to consider the detailed road layout and the access arrangements within the site from a highway safety perspective. The Highway Authority have been consulted on the application, and following the submission of a suite of amended plans, they have confirmed that they have no objection to the detailed layout and the internal access arrangements within the site. However, this is subject to various highway design details being approved through a Section 38 Agreement, and also subject to more precise design details being agreed as a condition of any reserved matters approval.

10.71 Some of the Highway Authority's more detailed comments have a potential bearing on parts of the development's landscape design - notably the width of the cycleway crossing of the ANRG and some of the surface materials to be used. From a design perspective, there is a clear rationale to the application as currently presented. What is important at this stage is that the Highway Authority have not raised any objection to the proposal on safety grounds. It is considered that the matters of detail raised by the Highway Authority can reasonably be addressed through conditions and further discussion following an approval of the Reserved Matters.

10.72 It should be noted that as part of the Deed of Variation required to deal with public access across the Agricultural Access points, a small variation to the existing S106 is also to be secured in respect of off-site highway works. Specifically, it has been agreed that the footway/cycleway requirement between the site and the Calmore roundabout can (for part of its route) be just a footway (and not a dedicated cycleway) due to the difficulties of achieving the required cycleway width. This change is not directly related to this Reserved Matter application, but it can most conveniently be formally agreed through the Deed of Variation that is required.

10.73 Overall, therefore, it is considered that the proposed development would be acceptable in terms of highway safety requirements. As such, the proposal would be consistent with safety requirements as set out in Policies ENV3, CCC1 and CCC2 of the Local Plan.

Other matters and considerations

10.74 The County Council Rights of Way team has requested that the applicant enter into a Section 106 legal agreement to secure contributions that mitigate the development's impact on the local Public Right of Way network. However, if these mitigation requirements were deemed to be necessary, they should have been secured through the outline planning permission because they are related to the principle of the development and not to the matters of detail which are the subject of this reserved matters application. The County Council Rights of Way team did not seek any such mitigation as part of the outline planning application, and it is simply not reasonable or appropriate to require additional mitigation now at this reserved matters stage.

10.75 The Crime Prevention Design Advisor gave advice on the original set of proposals that were submitted. Some of these comments have been taken on board through amended plans. Other comments are not considered to be matters that need to be acted upon. Ultimately good design is dependent upon a number of factors. Whilst safety and security are important design considerations, they should not drive the design at the expense of equally important design considerations. Through good natural surveillance and a carefully designed public landscaped areas, it is considered that the development has acceptably minimised opportunities for crime.

10.76 It is considered that the conditions of the outline planning permission adequately deal with the issues raised by the Council's Environmental Health Officers, and that no additional conditions are required.

10.77 It is noted that Hampshire Swifts have raised a concern that the number of Swift bricks / nesting boxes is far below current guidelines. Whilst these concerns are appreciated, the number of Swift bricks does comply with the terms of the outline planning permission. Therefore, there is not a reasonable justification to require a greater number of swift bricks to be provided. It is understood that guidance on Swift bricks has evolved since the outline planning application was considered. As such, a greater number of Swift bricks would be a reasonable expectation now if the application were a full planning application. However, being a reserved matters application, then the requirement can only reflect the conditions of the outline planning permission.

10.78 An Appropriate Assessment was carried out at outline stage. The conclusions reached then would still apply to this Reserved Matters application. The proposed areas of ANRG would ensure that adverse impacts on the integrity of European sites through increased recreational pressures would be avoided. It is noted that the nutrient calculator has been updated since the Outline Planning Permission was issued - and this will need to be addressed through the concurrent application to discharge Condition 32 of the Outline Planning Permission.

Developer Contributions

A Section 106 agreement was completed in connection with the Outline Planning Permission. This secured all necessary contributions to mitigate the development's impacts.

As part of the development, subject to any relief being granted the following amount Community Infrastructure Levy will be payable:

Description of Class	GIA New	GIA Existing	GIA Net increase	CIL Liability
Dwelling Houses	21854.7	0	21854.7	£2,387,205.69 *
Dwelling Houses AH	6199.2	0	6199.2	£677,143.38 *

11 CONCLUSION AND THE PLANNING BALANCE

The principle of development is already established through the outline planning permission. This reserved matters application responds appropriately and sympathetically to the conditions, obligations and requirements of the outline planning permission. The proposed layout of the development, the scale and appearance of the dwellings and the landscaping of the site would respond positively to the site's context, and would ensure the scheme is of an acceptably high design quality. The scheme delivers the necessary quantity and quality of ANRG, Public Open Space and other green infrastructure, and would provide a suitable housing mix that meets an appropriate range of needs, including the need for additional affordable housing. The development would be sustainable and safe, with an acceptable relationship to neighbouring properties and sites. And the proposal would be consistent with the requirements of Policy Strategic Site 1, other related Local Plan policies (notably policies ENV1 and ENV3), and the broad policies of the National Planning Policy Framework. As such, it is recommended that this reserved matters application be approved.

12 RECOMMENDATION

Delegated Authority be given to the Service Manager Development Management to **GRANT APPROVAL** of the **Reserved matters** of the layout, scale and appearance of the development and the landscaping of the site (including the detailed access arrangements within the site), specified in condition 3 of outline permission reference number 20/10997, dated 16th January 2023.

subject to:

- i) the completion of a Deed of Variation to the existing Section 106 Agreement to secure public access across the agricultural crossing points (and adjustments to the agreed off-site highway works as referenced in the report)
- ii) the imposition of the conditions set out below.

Proposed Conditions:

1. The development permitted shall be carried out in accordance with the following approved plans:

P-22-0203_DE_001_A_14 - Site Location Plan
P-22-4321_DE_004_F_001 - Proposed Streetscenes (dated 28/06/2024)

Tree Protection Plan 18071-6

10975-FPCR-XX-XX-DR-L-0009 rev P01 - Signage Strategy

Reason: To ensure satisfactory provision of the development.

2. Before development commences above slab levels, samples or exact details of the facing and roofing materials to be used shall be submitted to and approved in writing by the Local Planning Authority. The development shall only be implemented in accordance with the approved details.

Reason: To ensure an acceptable appearance of the development in accordance with Policy ENV3 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park.

3. Before development of any of the referenced features in this condition commences, the following additional landscaping details shall be submitted to and approved in writing by the Local Planning Authority:

- a) exact details of the materials to be used for all hard surfaced areas
- b) elevational details of all boundary treatments, including details of designs where there would be changes of level
- c) details of boundary treatments where footpath connections are proposed to connect with the boundaries of the site
- d) details of the precise alignment and design of the footpath through Hatton's Plantation
- e) details of the exact design of the waste collection points

Development shall take place in full accordance with the approved details.

Reason: To ensure that the development takes place in an appropriate way and to comply with Policies ENV3 and ENV4 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park.

4. In respect of the approved on plot landscaping proposals, the planting, seeding or turfing associated with each dwelling / apartment shall be carried out in full before first occupation of that dwelling / apartment or within such other timescale as is otherwise approved in writing by the Local Planning Authority.

Any trees or plants which within a period of 5 years from the completion of the development die, are removed or become seriously damaged or diseased shall be replaced in the next planting season with others of similar size or species, unless the Local Planning Authority gives written consent to any variation.

Reason: To ensure the appearance and setting of the development is satisfactory and to comply with Policies ENV3 and ENV4 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park.

5. In respect of the approved landscaping proposals for the areas of public realm (including Alternative Natural Recreational Greenspace and Public Open Space), the approved planting, seeding or turfing details shall be carried out in full in accordance with a programme for implementation that shall be submitted to and approved in writing by the Local Planning Authority before any dwelling is occupied.

Any trees or plants which within a period of 5 years from the completion of the development die, are removed or become seriously damaged or diseased shall be replaced in the next planting season with others of similar size or species, unless the Local Planning Authority gives written consent to any variation.

Reason: To ensure the appearance and setting of the development is satisfactory and to comply with Policies ENV3 and ENV4 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park.

6. Notwithstanding the provisions of the Town and Country Planning (General Permitted Development) Order 2015 (as amended) (or any re-enactment of that Order), no windows or rooflights shall be inserted into the side (west facing) elevation of Units 102 and 103 unless express planning permission has first been granted.

Reason: To safeguard the privacy of the adjoining neighbouring properties in accordance with Policy ENV3 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park.

7. No development shall commence until full details of the internal road arrangement and construction details including the footways, shared-use paths, pedestrian/cycle crossings and connections with the walking and cycling network have been submitted to and approved in writing by the Local Planning Authority. The approved details shall be fully implemented before any dwelling is occupied or within such other timeframe as is agreed in writing by the Local Planning Authority.

Reason: To ensure safety of sustainable access

8. No meter boxes shall be placed on the front elevations of the detached, semi-detached or end of terrace dwellings hereby approved, or the apartment blocks, unless otherwise agreed in writing by the Local Planning Authority, and then only in accordance with details that have been agreed in writing by the Local Planning Authority.

Reason: In the interests of the visual amenities of the area.

Scale 1:5000

N.B. If printing this plan from
the internet, it will not be to
scale.

Planning Committee 11 September 2024

Application Number: 21/11329 Full Planning Permission
Site: GANG WARILY FARM, NEWLANDS ROAD, FAWLEY
SO45 1GA
Development: Construction of 19 affordable dwellings (10 houses and 9
apartments); adjusted vehicular access; associated amenity
space and landscaping; demolition of the existing on-site
dwelling and associated outbuildings
Applicant: Reflect Homes Ltd
Agent: Lucid Planning Ltd
Target Date: 18/01/2022
Case Officer: James Gilfillan
Officer Recommendation: Refuse
Reason for Referral to Committee: Amendment to August 2022 Committee resolution

1 Committee Update Report 27/08/24

- 1.1 On the 10th August 2022 members of the Planning Committee resolved to support their officers recommendation to approve the proposed development, subject to securing a S.106 Legal Agreement to deliver habitat mitigation and secure the scheme as Affordable Housing.
- 1.2 As a housing scheme on an unallocated site, outside the built up areas as defined by the Local Plan, in order to be acceptable, in accordance with adopted Policy HOU5 of the New Forest District Local Plan Part 1: Planning Strategy 2020, it would have to be delivered as affordable housing.
- 1.3 Also, in order to be acceptable, residential schemes are required to ensure the integrity of European designated sites of nature conservation interested in the New Forest and Solent are not harmed by recreational impacts arising from the additional residents living close to sensitive habitats, and to contribute to monitoring the effect of nitrogen deposition from vehicle exhausts through the New Forest.
- 1.4 There has been no change in policy or circumstances such that these obligations are no longer relevant or necessary to make the scheme acceptable.
- 1.5 The applicant has not secured provision of such mitigation and obligations by engaging with the Council in the preparation of a binding S.106 legal agreement.
- 1.6 Given the time that has elapsed since the original resolution was reached, it is considered little prospect that the applicant will now engage with the Council in preparing the S.106 required to secure the mitigation or subsequently deliver the development. .

Conclusion

Based on this position, contrary to the original recommendation and the conclusion set out below in the original case officer report, it is now recommend that the application be **REFUSED** for the following reasons:

1. The scheme proposes residential development in the open countryside contrary to the strategic approach to housing delivery. In order to be acceptable and in accordance with policy HOU5 the scheme is required to be delivered as 100% Affordable Housing. The applicant has not ensured through an appropriately worded legal agreement that the scheme will be delivered and retained as Affordable Housing to meet local housing needs in accordance with HOU5.
2. The recreational and Air Quality impacts of the proposed development on the New Forest Special Area of Conservation, the New Forest Special Protection Area, the New Forest Ramsar site, the Solent and Southampton Water Special Protection Area, the Solent and Southampton Water Ramsar site, the Solent Maritime Special Area of Conservation, and the Solent and Dorset Coast Special Protection Area would not be adequately mitigated and the proposed development would therefore be likely to unacceptably increase recreational pressures and erode air quality on these sensitive European nature conservation sites, contrary to Policy ENV1 of the Local Plan 2016-2036 Part One: Planning Strategy and the Council's Supplementary Planning Document "Mitigation for Recreational Impacts on New Forest European Sites" and the Bird Aware Solent strategy 2017.

Original Report presented to 10th August 2022 Planning Committee

SUMMARY OF THE MAIN ISSUES

The key issues are:

- 1) Principle of the development
- 2) Impact on the character and appearance of the area
- 3) Highway safety

This application is to be considered by Committee because of the objection received from Cllr Glass

2 SITE DESCRIPTION

The site is on the north side of Newlands Road, at the east end, adjacent to the junction with Blackfield Road. It is in the open countryside, outside, but close to the built up areas of Fawley and Blackfield to the east and south respectively.

The site is occupied by a detached house on approximately a third of the application site, with variety of outbuildings, garages and green houses, located at the west side of the site. The remaining area is being grazed as horse paddocks.

There are two vehicle access points on to the application site, serving the two respective parts.

The site is enclosed by landscape, largely evergreen hedges, but there are trees overhanging from adjacent to the site. Trees to the north east are covered by a TPO. The site is surrounded by open space, further paddocks and allocated public open space.

The ground falls to the east across the front of the site. Land to the north and west is several metres lower. To the north is a Scout and Guide hall, to the west is a council maintenance depot and further community services.

There is a mobile phone lattice tower close to the west boundary and Fawley Oil refinery is visible to the north of the site.

3 PROPOSED DEVELOPMENT

Construction of 19 affordable dwellings (10 houses, 9 apartments); adjusted vehicular access; associated amenity space and landscaping; demolition of the existing on-site dwelling and associated outbuildings

4 PLANNING HISTORY

Proposal	Decision Date	Decision Description	Status
ENQ/19/20091/MARC Proposed 17 Dwellings			Completed

6 PARISH / TOWN COUNCIL COMMENTS

Fawley Parish Council: No 5. Happy to delegate to Officers

7 COUNCILLOR COMMENTS

Cllr Glass objects to the proposal due to the overdevelopment, conflict with highway safety and risk from HSE explosion zone.

8 CONSULTEE COMMENTS

Comments have been received from the following consultees:

NFDC Conservation: No heritage assets affected by this scheme. No objection.

NFDC Ecology: Recreational, air quality and water quality impacts would affect the integrity of designated sites of nature conservation interest and should be mitigated. Conditions can secure appropriate on site ecological mitigation and bio-diversity net gain. No objection.

NFDC Environmental Design Team: The proposal appears to be overdeveloped and unsympathetic to the local distinctiveness and landscape character. (Received prior to amended plans being prepared)

NFDC Environmental Health Contaminated Land: The site is close to potential sources of contamination and its previous use as a farm could result in a the ground being contaminated. An appropriate condition should be imposed. No objection.

NFDC Housing: The Council has sufficient evidence of need for affordable housing in the Fawley Parish that the scheme would make a significant contribution to meeting local needs. Inclusion of 1-bed sized units would make a valuable addition to the local affordable housing stock.

NFDC Open Space Officer: Advises that if the site is over 0.5ha then public open space and facilities should be provided in accordance with saved policy CS7.

HCC Education: No objection. There is sufficient capacity in the local schools to accommodate any school age children living at this site.

HCC Highways: The principle of the proposals are acceptable, safe access to the site can be delivered, there is sufficient capacity in the local highway network which can accommodate the likely volumes of traffic generated. Appropriate improvements to pedestrian routes in the vicinity are proposed. Conditions and obligations can secure the required mitigation. No objection.

HCC Surface Water: No objection in principle and surface water run off rates and routes are acceptable. Detailed technical details and maintenance points and responsibility are requested.

Hampshire Fire & Rescue Service: No objection subject to compliance with Building Regulations

Hampshire Swifts: Seeks a condition securing inclusion of 1 swift box per dwelling is imposed. No objection.

Health and Safety Executive. Do not advise against the development.

Southern Water: Requests a condition securing details of foul water disposal is imposed. No objection.

9 REPRESENTATIONS RECEIVED

The following is a summary of the representations received.

- Overdevelopment
- Lack of parking, including visitor parking
- Highway safety concerns and increased congestion
- Noise and disturbance on existing residents and amenity of future residents
- Negative impact on biodiversity and ecology
- Problems with surface water flooding, drainage and sewers
- Damage caused by large numbers of large vehicles

10 PLANNING ASSESSMENT

Principle of Development

The site is outside the identified built up areas in the district. Whilst it is close to built up areas of Fawley and Blackfield it falls in the open countryside.

A principal of the adopted local plan is to direct development to accessible locations to sustain the vitality and viability of the towns and villages of the District. STR3 and STR4 set the hierarchy of towns and villages and the nature of development that

would be appropriate therein. Beyond the defined settlement boundaries and identified rural villages the primary objectives are to conserve and enhance the countryside and natural environment.

Whilst that does not preclude all development, based on a need to sustain rural areas and support rural enterprise, recreational facilities and farming, certain forms of development would be acceptable. However the scheme does not propose such a form of development.

The site does not therefore accord with the principal provisions of STR3 and 4, the principle of the development is therefore not accepted.

The footprint of the existing dwelling and its outbuildings would be considered to be previously developed land and whilst there is a presumption in favour of using such brownfield land in advance of greenfield sites, the area of the site and percentage of previously developed land offers little additional development justification.

Adopted policies HOU5 and DM20 of local plan parts 1 and 2 respectively do however allow for affordable housing schemes to be brought forward where they are adjoining a settlement which provides a range of local services and facilities, which can be safely accessed.

The description of development proposes the scheme to be delivered as an affordable housing scheme. The supporting Design & Access statement sets out the form that this would take, proposing an appropriate split of shared ownership and social rent. The consultation response received from the Councils Housing Services identifies a clear need for affordable housing in the Fawley Parish, that the scheme would make a significantly positive contribution towards meeting. By providing the entire scheme as affordable housing the scheme complies with the target of 35% being affordable as required by adopted policy HOU2.

Whilst a significant number of homes would be delivered on the allocated former Fawley power station site (SS4), including a large number of affordable housing, it is clear that the predicted delivery rates for that scheme, provided for the 5 year housing land supply calculations, would not deliver these much needed affordable homes in the short term. The current application proposals would be delivered in much shorter time scales, meeting need in the short term.

The site is immediately adjacent to a large area of public open space, with formal and informal sports and play facilities, several options for community and youth clubs. Within walking distance of 2 primary schools and Blackfield local centre. It is also in easy cycling distance of many employment opportunities in local centres, industrial areas and the aforementioned services.

The scheme provides a mix of houses and flats and sizes, providing for a mixed and balanced community and providing for a variety of needs.

The scheme has minor economic benefits from employment related to construction and footfall and spend in services and facilities in the nearby local centres. Irrespective of being outside the identified built up areas its location does achieve environmental benefits of delivering housing in a location close to a wide variety of services, facilities and infrastructure. It has social benefits of delivering a mix of housing types, sizes and tenures as affordable housing, meeting identified housing need in the parish.

Whilst the scheme would conflict with strategic policies STR3 and STR4, the adopted development plan does allow for the principle of the scheme as proposed.

The principle of the development has significant benefits and can be accepted for the reasons set out.

Design, site layout and impact on local character and appearance of area

Whilst the site is outside the defined built up areas and therefore in the countryside, the character of the area is far from being rural. Residential properties are visible on higher ground to the south on Blackfield Road and the oil refinery dominates wider views throughout the area.

The layout and design of the scheme has evolved and been revised in response to the above reported comments of the Councils Environmental Design Team and that of Fawley Parish Council.

The scheme presents a contemporary style of architecture. The variety in building sizes and forms, especially the roof shapes, ensures the scheme has cohesiveness as a small group, without excessive repetition or homogeneity and provides an attractive streetscene. Whilst this does not readily relate to the local vernacular, the style and indicative materials would be a positive addition. Chimney stacks would be included contributing positively to the appearance of the roofline

The existing drive slopes up in to the site and the house is elevated above the road level. The scheme responds to the sloping ground, with finished floor levels of each building stepping down to the east following the topography. The access drive would be graded accordingly.

Whilst the block of flats on the east side of the site accommodates a flat in the roof, resulting in a larger roof form, raised eaves and ridge, that interrupts the response to the sloping ground, it is set sufficiently far back in to the site to mitigate the effect of the size in views of the site and the larger element of the roof is at the east edge, away from the neighbouring building. Furthermore it is heavily screened by trees on the adjoining land to the east.

The proposed layout and roof forms, ensures gaps between buildings to appreciate side elevations and space beyond, achieve an appropriate intensity of built form and not dissimilar to the existing layout of houses to the south along Blackfield Road. The block of 4 flats on the west side of the site are positioned close to the front of the site and would be particularly more prominent in the streetscene, which would be a more obvious change in the appearance of the site and streetscene and erode the open landscape character of the area to a degree. Views of the site from the west would include the houses along Blackfield Road. Sufficient space would be retained for new landscape setting along the boundaries that would in part obscure views of the entire building, it provides active frontage on to the main access point, reducing the perception of vehicle priority. Further enclosure and frontage on to the access to the site is provided by the houses, plots 5-7, facing onto it from the north.

Whilst the parking areas would be quite dominant within the site, their position and landscape planting along the frontage would screen them in views from outside the site. This does ensure the houses are set sufficiently deep in to the plot to reflect the alignment of the houses on Blackfield Road, whereby the built form is not prominently positioned close to the site frontage, which in turn is then dominated by hardsurfaced parking areas, but gives the perception, in longer views, of plots with sizeable front gardens.

Despite the extent of hard surfaced area, there remains space for landscape separation and setting throughout the site. Including opportunities for tree planting to provide vertical landscape features in the wider views of the site.

The scheme strikes a successful balance between the location of the site being outside the identified built up areas, the layout of built form in the locality, accepting its proximity to those areas and making optimal use of the site, as encouraged by NPPF para.124.

There are no features of heritage significance close to the site, or that the scheme would have an impact on their setting or be visible in wider views alongside.

Similarly the site would not be readily visible from the New Forest National Park, or in longer distance views to the extent of having an impact on its landscape and scenic beauty.

Landscape impact and trees

There are a variety of trees across the site and overhanging from outside the site. Trees in the north east corner fall within an area Tree Preservation Order on land extending to the north of the site. Those trees are a group of Cypress trees, largely managed as a boundary hedgerow. Considered to be 'B' category, they are a constraint to the development. The proposed layout would require them to be pruned back towards the boundary, however such works would not undermine their retention or wider contribution to amenity. Furthermore the adjacent building is the block of five flats that would enjoy shared amenity space all the way around it, minimising the potential impact on the amenity that might otherwise occur if the space was an enclosed private garden.

The most prominent of the trees identified on the tree survey is the category 'A' Oak tree, outside the south east corner of the application site, but with roots and branches extending into the site. The layout avoids development within its root zone, preserving its health and retention. Furthermore the land around it does not fall to be garden amenity space, minimising the potential for the tree to come under pressure for pruning, in the future, due to the extent of shading it would cast potentially compromising private amenity space.

Numerous ornamental garden fruit trees would be removed to facilitate the development, largely in the garden of the existing house and removed to allow for the widened access. Their removal has no wider implications for the appearance of the site and can be readily replaced to preserve the arboricultural contribution to the visual amenity of the character of the area.

This includes removal of the frontage hedgerow, which whilst it contributes to the green edge of the road, has been subject to arson, is proposed to be removed and replaced with a native species, preserving the landscape character of Newlands Road and enhancing the appearance of the site and its bio-diversity.

The Arboricultural Impact Assessment supporting the application has been superseded by revisions to the design and layout, nor does it include a method statement for the works to trees and their protection during construction. As such a condition could be used to secure such a method statement to capture the revised layout and works.

Land opposite the site on Blackfield Road is designated as open space by saved policy DW-E12. The scheme would not have any direct impact on that space, or its contribution towards preserving the rural setting of Blackfield and Fawley and preventing their coalescence.

The application site is not within this designation and whilst close to the edge of the

urban area, there remains a sizeable landscape separation from built form to the east, preserving the continuation of that established characteristic.

Highway safety, access and parking

Access to the site would be from the same position as the drive for the existing house but it is proposed to be widened to allow 2 way flow of vehicles. Removal of the existing hedge and landscape around the access would ensure appropriate visibility splays are achieved to preserve highway safety. This would include improved footways along the site frontage and into the site, improving facilities for pedestrians already passing the site.

Further enhancements for pedestrians would be undertaken in the area, providing safer crossing points on routes towards Fawley to the east and Blackfield in the west. A direct route from the site in to the public open space to the west would also be included for pedestrians.

33 parking spaces are provided for the 19 units. Adopted parking standards require 31.2 unallocated spaces. Conditions could be used to ensure the spaces are provided and retained for shared use. Two spaces are identified as disabled compliant, however multiple other spaces have space around them to be more flexible for those with mobility restrictions.

Shared cycle stores have been indicated for the flats and each house would have adequate access to its rear garden where bike storage would be provided. Conditions can make sure appropriate racks are provided.

Tracking plans of a refuse wagon entering the site in a forward gear, manoeuvring to approach many of the properties and leaving in a forward gear, have been provided.

Potential revisions to the Councils collection regime can not be confirmed at this time, but the site is capable of being serviced by such a large sized vehicle. This also demonstrates that the majority of delivery vehicles likely to visit the site, including ambulances and home shopping vehicles are capable of entering and exiting safely.

Electric vehicle charging points have been shown, but insufficient to meet the requirements of policy CCC2. A condition could be used to enable a review of how best to make such infrastructure available in the unallocated parking courtyard.

Whilst representations received question highway safety and congestion, there is no evidence that there is a fundamental problem with the design of the junction between Newlands Road and Blackfield Road, to the east of the site, or that this application would give rise increased vehicle flows and manoeuvres that would be detrimental to highway safety, or congestion and queuing times, on the local highway network. Hampshire CC highway authority have not objected to the scheme.

The potential for damage to be caused to road infrastructure by large delivery vehicles and construction equipment is not a matter for the Planning Authority to consider. The scheme is not large enough in scale or construction duration, or constrained to warrant a onerous construction management plan.

Residential amenity

Due to the location of the site in respect of nearby residential properties, there would be no impact on the privacy, amenity or outlook of the occupiers of existing properties. Any noise generated on site would be residential in nature and scale,

commensurate with the character of surrounding residential areas.

Due to the scale of the scheme, the position of the site and separation distances to existing neighbours, construction would not give rise to levels of noise and disturbance over a period of time that would be detrimental to the amenity of local residents. However in accordance with the adopted Air Quality SPD, it would be appropriate to secure a construction management plan to manage construction traffic, parking and dust generated across adjoining roads.

Sufficient on site amenity space is provided to meet the reasonable amenity needs of residents. Residents would have safe routes to near by formal and informal public open space.

The layout ensures sufficient sunlight is achieved by all dwellings to ensure passive solar gain can contribute to lighting and heating needs of the occupiers. It also ensures adequate privacy for residents and a good degree of outlook, contributing to their amenity positively.

The site is close to Fawley Oil Refinery and falls within its safety consultation zones. The Health & Safety Executive do not advise against supporting the application.

Notwithstanding the consultation response from the Councils Public Open Space Officer, the site falls below the 0.5ha area, that triggers application of saved policy CS07, requiring the development to make provision for Public Open Space. There is space on the site for informal recreation, should residents desire, however the site is well served by a variety of formal and informal play and recreation opportunities within walking distances.

Ecology

There are no protected habitats on or adjacent to the site. Due to the residential use and paddock grazing there is little bio-diversity on site or supported by the site. A draft ecological appraisal has been submitted, providing survey results and making mitigation recommendations. The Councils Ecologist accepts the findings, supports the identified mitigation and suggests conditions.

As a 'Major' application the scheme will be expected to achieve 10% bio-diversity net gain. A variety of opportunities to achieve this improvement have been identified, which include infrastructure such as bird and bat boxes, that would meet the expectations of the representation received from Hampshire Swifts, but also see removal of the existing non-native hedgerow and trees along the site frontage and replacement with native species to maintain the landscape edge to the site.

Appropriate conditions could be used to ensure landscape and ecological enhancements are secured to achieve bio-diversity net gain and protect existing ecology.

Habitat Mitigation

In accordance with the Conservation of Habitats and Species Regulations 2017 ('the Habitat Regulations') an Appropriate Assessment has been carried out as to whether granting permission would adversely affect the integrity of the New Forest and Solent Coast European sites, in view of that site's conservation objectives. The Assessment concludes that the proposed development would, in combination with other developments, have an adverse effect due to the recreational impacts on the European sites, but that such adverse impacts would be avoided if the applicant were to enter into a Section 106 legal agreement to secure a habitat mitigation

contribution in accordance with the Council's Mitigation Strategy. In this case, the applicant has entered into a Section 106 legal agreement, which secures the required habitat mitigation contribution.

Nitrate neutrality and impact on Solent SAC and SPAs

In accordance with the Conservation of Habitats and Species Regulations 2017 ('the Habitat Regulations') an Appropriate Assessment has been carried out as to whether granting permission which includes an element of new residential overnight accommodation would adversely affect the integrity of the New Forest and Solent Coast European sites, in view of that site's conservation objectives having regard to nitrogen levels in the River Solent catchment. The Assessment concludes that the proposed development would, in combination with other developments, have an adverse effect due to the impacts of additional nitrate loading on the River Solent catchment unless nitrate neutrality can be achieved, or adequate and effective mitigation is in place prior to any new dwelling being occupied. In accordance with the Council Position Statement agreed on 4th September 2019, these adverse impacts would be avoided if the planning permission were to be conditional upon the approval of proposals for the mitigation of that impact, such measures to be implemented prior to occupation of the new residential accommodation. These measures to include undertaking a water efficiency calculation together with a mitigation package to addressing the additional nutrient load imposed on protected European Sites by the development. A Grampian style condition has been agreed with the applicant and is attached to this consent.

Air Quality

To ensure that impacts on international nature conservation sites are adequately mitigated, a financial contribution is required towards monitoring and, if necessary (based on future monitoring outcomes) managing or mitigating air quality effects within the New Forest SPA, SAC and Ramsar site. There is potential for traffic-related nitrogen air pollution (including NO_x, nitrogen deposition and ammonia) to affect the internationally important Annex 1 habitats for which the New Forest SAC was designated, and by extension those of the other International designations. Given the uncertainties in present data, a contribution is required to undertake ongoing monitoring of the effects of traffic emissions on sensitive locations. A monitoring strategy will be implemented to provide the earliest possible indication that the forms of nitrogen pollution discussed (including ammonia concentrations) are beginning to affect vegetation, so that, if necessary, measures can be taken to mitigate the impact and prevent an adverse effect on the integrity of the SAC habitats from occurring.

Drainage, Flood Risk, Sustainability and Local Air Quality.

The site is not at risk of surface water or fluvial flooding. Both forms of flooding occur on the open space land to the east and south east, but is not predicted to effect any nearby properties. The development has the potential to increase surface water run off rates to contribute to that flood risk. Appropriate on site attenuation to manage surface water run off has been included in the scheme.

The applicant has sought to provide the additional technical details required by Hampshire CC drainage authority, however the drainage scheme doesn't reflect the revised scheme layout. As such a condition could be imposed to secure a comprehensive revision to the drainage plan.

Foul water sewers exist on the adjoining land and highway to the east. Securing a

connection would be a technical matter for the Building Regulations and for the respective parties to agree. Whilst there is no reason to believe that a solution can not be achieved to meet the needs of the development a condition is considered appropriate to ensure the route of sewers has regard to the tree constraints on adjoining land.

Being new builds, the scheme would be required to adhere to the latest building regulations, ensuring latest energy efficiency, insulation, water usage standards are achieved, including EV charging points and Air Source Heat Pumps.

The plans indicate the provision of solar panels on the roofs of all the dwellings, providing on site renewable sources of energy generation. In the absence of a policy requiring this infrastructure, their inclusion is positive and moderate weight in favour of the scheme should be applied to this benefit.

Despite showing chimneys, these would not provide flues for traditional solid fuel burners, minimising the likelihood of such features impacting on air quality. Provision of EV charging points would reduce the impact of private car use on air quality locally. Securing a Construction Management Plan is advocated by the Air Quality SPD and an appropriate condition could be imposed.

Developer Contributions

As part of the development, the following is required, but has not been secured via a Section 106 agreement:

- £81,676 towards New Forest recreational disturbance infrastructure
- £12,113 towards New Forest recreational disturbance non-infrastructure
- £11,208 towards Solent recreational disturbance
- £1,729.00 towards monitoring Air Quality in the New Forest
- £750.00 Commencement monitoring fee
- £750.00 Affordable housing monitoring fee
- £4,625.00 Bio-diversity Net Gain 30yr monitoring fee
- Secure the site as 100% affordable housing for occupation by residents nominated by New Forest DC.

As part of the development, subject to any social housing relief being granted, the following amount of Community Infrastructure Levy will be payable:

Type	Proposed Floorspace (sq/m)	Existing Floorspace (sq/m)	Net Floorspace (sq/m)	Chargeable Floorspace (sq/m)	Rate	Total
Dwelling houses	1555	0	1555	1555	£80/sqm	£150,901.66

Subtotal:	£158,849.25
Relief:	£0.00
Total Payable:	£158,849.25

11 CONCLUSION

Despite the location of the site outside the identified built-up areas, it is well served by services and facilities to support residents, furthermore it is close enough that those services can be accessed safely and conveniently by walking or cycling. The scheme proposes 100% affordable housing, for which there is identified need locally in Fawley parish and across the district, this weighs significantly in favour of the development and accords with adopted policy HOU5 and is not fundamentally in conflict with STR3 and STR4 to the extent of being contrary to the development plan as a whole.

Furthermore, as the Council is currently unable to demonstrate the required 5 year housing land supply, and therefore the ability to oppose development solely upon relevant policies within the development plan is reduced, and further weight has to be given to the delivery of all new homes.

The scheme has minor economic benefits during construction and increased footfall in local shops and services, it has environmental benefits of optimising the use of land close to services and facilities, with a design and layout that preserves the character of the area and the wider Green Belt, National Park and AONB, and has social benefits of providing affordable housing.

12 RECOMMENDATION

Delegated Authority be given to the Executive Head of Planning, Regeneration and Economy to **GRANT PERMISSION** subject to:

- i) the completion of a planning obligation entered into by way of a Section 106 Agreement to secure:
 - £81,676 towards New Forest recreational disturbance infrastructure
 - £12,113 towards New Forest recreational disturbance non-infrastructure
 - £11,208 towards Solent recreational disturbance
 - £1,729.00 towards monitoring Air Quality in the New Forest
 - £750.00 Commencement monitoring fee
 - £750.00 Affordable housing monitoring fee
 - £4,625.00 Bio-diversity Net Gain 30yr monitoring fee
 - Secure the site as 100% affordable housing for occupation by residents nominated by New Forest DC.
- ii) the imposition of the conditions set out below.

Proposed Conditions:

1. The development hereby permitted shall be begun before the expiration of three years from the date of this permission.

Reason: To comply with Section 91 of the Town and Country Planning Act 1990 as amended by Section 51 of the Planning and Compulsory Purchase Act 2004.

2. The development permitted shall be carried out in accordance with the following approved plans:

Site location plan Drg No.100 rev B rec'd 21/09/21
Block Plan Drg No.101 rev B rec'd 20/06/22
Proposed Site Plan Drg No.102 rev H rec'd 20/06/22

Proposed Plans & Elevations Plots 1-4 Drg No.200 rev B rec'd 08/02/22
Proposed Plans & Elevations Plots 5-7 Drg No.201 rev B rec'd 08/02/22
Proposed Plans & Elevations Plots 8-9 Drg No.210 rev A rec'd 20/06/22
Proposed Plans & Elevations Plots 10-11 Drg No.211 rev A rec'd 20/06/22
Proposed Plans & Elevations Plots 12-14 Drg No.206 rev A rec'd 20/06/22
Proposed Floor Plans Plots 15-19 Drg No.208 rev A rec'd 20/06/22
Proposed Elevations Plots 15-19 Drg No.209 rev A rec'd 20/06/22

Streetscene & Site section Drg No.207 rev C rec'd 20/06/22

Reason: To ensure satisfactory provision of the development.

3. Materials

Prior to construction above Damp Proof Course, samples or exact details of the materials to be used on the external facing, roofing, doors, windows, gutters and downpipes of all buildings on site shall be submitted to and approved in writing by the Local Planning Authority. The development shall only be implemented in accordance with the approved details.

Reason: To ensure an acceptable appearance of the building in accordance with Policy ENV3 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park.

4. AMS

Before development commences (including site clearance, demolition and any other preparatory works) a scheme for the protection of trees to be retained shall be submitted to and approved in writing by the Local Planning Authority. Such a scheme shall include a method statement detailing timing of events, all changes of existing surfaces and plans showing the protective fencing or other measures required for the avoidance of damage to retained trees all in accordance with BS 5837 (2012) "Trees in Relation to Construction Recommendations". Such fencing shall be erected prior to any other site operation and at least 24 hours notice shall be given to the Local Planning Authority that it has been erected. The tree protection measures installed shall be maintained and retained for the full duration of the works or until such time as agreed in writing with the Local Planning Authority. No activities, nor material storage, nor placement of site huts or other equipment whatsoever shall take place within the fencing without the prior written agreement with the Local Planning Authority.

Reason: To ensure the retention of existing trees and natural features and avoidance of damage during the construction phase in accordance with Policies ENV3 and ENV4 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park.

5. Parking and Access

The development hereby permitted shall not be occupied until the vehicle and pedestrian accesses, and parking and manoeuvring spaces shown on the approved plans have been provided.

The parking spaces shown on the approved plan for the parking of motor vehicles shall be retained and kept available for the parking of motor vehicles for the dwellings and their visitors hereby approved at all times and shall not be allocated to an individual property.

Reason: To ensure adequate parking provision is made in the interest of highway safety and in accordance with Policies ENV3 and CCC2 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park.

6. The development hereby permitted shall not be occupied until:

A water efficiency calculation in accordance with the Government's National Calculation Methodology for assessing water efficiency in new dwellings has been undertaken which demonstrates that no more than 110 litres of water per person per day shall be consumed within the development, and this calculation has been submitted to, and approved in writing by, the Local Planning Authority; all measures necessary to meet the agreed waste water efficiency calculation must be installed before first occupation and retained thereafter;

A mitigation package addressing the additional nutrient input arising from the development has been submitted to, and approved in writing by, the Local Planning Authority. Such mitigation package shall address all of the additional nutrient load imposed on protected European Sites by the development when fully occupied and shall allow the Local Planning Authority to ascertain on the basis of the best available scientific evidence that such additional nutrient loading will not have an adverse effect on the integrity of the protected European Sites, having regard to the conservation objectives for those sites; and

The mitigation package shall include a timetable for implementation and measures for retention and maintenance of that mitigation package, which shall thereafter be implemented.

Reason: There is existing evidence of high levels of nitrogen and phosphorus in the water environment with evidence of eutrophication at some European designated nature conservation sites in the Solent catchment. The PUSH Integrated Water Management Strategy has identified that there is uncertainty as to whether new housing development can be accommodated without having a detrimental impact on the designated sites within the Solent. Further detail regarding this can be found in the appropriate assessment that was carried out regarding this planning application. To ensure that the proposal may proceed as sustainable

development, there is a duty upon the local planning authority to ensure that sufficient mitigation for is provided against any impacts which might arise upon the designated sites. In coming to this decision, the Council have had regard to Regulation 63 of the Conservation of Habitats and Species Regulations 2017.

7. If unexpected contamination is found after development has begun, development must be halted on that part of the site affected by the unexpected contamination to the extent specified by the [Local] Planning Authority in writing, until an investigation and risk assessment has been undertaken in accordance with Environment Agency's technical Land Contamination Risk Management (LCRM) guidance. Where remediation is necessary a remediation scheme must be prepared to bring the site to a condition suitable for the intended use by removing unacceptable risks to human health, buildings and other property and the natural and historical environment must be prepared, and is subject to the approval in writing of the [Local] Planning Authority. The scheme must include all works to be undertaken, proposed remediation objectives and remediation criteria, timetable of works and site management procedures. The scheme must ensure that the site will not qualify as contaminated land under Part 2A of the Environmental Protection Act 1990 in relation to the intended use of the land after remediation. Following completion of measures identified in the approved remediation scheme, a verification report that demonstrates the effectiveness of the remediation carried out must be produced, and is subject to the approval in writing of the Local Planning Authority.

Reason: The site is close to and has been previously used for potentially contaminative activities and to ensure that risks from land contamination to the future users of the land and neighbouring land are minimised, together with those to controlled waters, property and ecological systems, and to ensure that the development can be carried out safely without unacceptable risks to workers, neighbours and other offsite receptors in accordance with Policy CCC1 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside the National Park.

8. Landscaping

Prior to commencement of construction above DPC of the houses hereby approved a scheme of landscaping of the site shall be submitted for approval in writing by the Local Planning Authority. This scheme shall include :

- (a) the existing trees and shrubs which have been agreed to be retained;
- (b) a specification for new planting (species, size, spacing and location);
- (c) areas for hard surfacing and the materials to be used;
- (d) other means of enclosure and retaining structures;
- (e) a method and programme for its implementation and the means to provide for its future maintenance.

The approved scheme shall then be implemented prior to first occupation of the houses, completed before final occupation and thereafter retained and maintained in accordance with the agreed schedule.

Reason: To ensure that the development takes place in an appropriate way and to comply with Policies ENV3 and ENV4 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park.

9. Prior to the commencement of development a strategy for the delivery of Biodiversity Net Gain and a Monitoring and Management Plan shall be submitted and approved in writing by the Local Planning Authority. It shall include:

- Methods for delivering at least a 10% increase in BNG on the site in accordance with the most up to date Natural England bio-diversity metric;
- Responsibilities for delivering BNG
- Description of the habitats to be managed;
- Ecological trends and constraints on site that might influence management;
- Clear timed and measurable objectives in the short, medium and long-term for BNG - Detail objectives for all habitats (target condition) and define key indicators to measure success;
- Define appropriate management options and actions for achieving aims and objectives;
- A commitment to adaptive management in response to monitoring to secure the intended biodiversity outcomes;
- Preparation of a work schedule;
- Details for a formal review process when objectives are not fully reached;
- Key milestones for reviewing the monitoring;
- Establish a standard format for collection of monitoring data to make it repeatable and consistent;
- Identify and define set monitoring points (representing the key habitats on site) where photographs can be taken as part of monitoring to record the status of habitats on site.

The BNG monitoring report shall be produced by a suitably qualified and experienced ecologist and shall include the following for the target habitats:

- Credentials of the ecologist undertaking the monitoring
- Assessment of habitats against the objectives defined in the management plan;
- Any presence recorded of target species;
- Date stamped photos accompanied by detailed site notes on extent of growth and condition using indicators in the management plan with any other notes of interest;
- If the target species /habitat is not present, provide detailed site notes on factors that are / could hinder growth or establishment;
- Detailed specific recommendations (where appropriate) on management actions to promote growth /establishment of target species / habitats including timescales for undertaking actions and marked site plans to show the actions;
- Photographs from the fixed monitoring points detailed in the management plan using high quality images.

The agreed methods of delivering BNG shall then be implemented in accordance with agreed timetable and thereafter managed and monitored as agreed.

Reason: In order to ensure appropriate delivery of bio-diversity net gain and in accordance with policies STR1 of the New Forest District Local Plan Part 1: Planning Strategy 2020 and DM2 of the New Forest District Local Plan part 2: Sites and DM policies 2014.

10. Prior to first occupation of the scheme hereby approved, the highway improvement works to enhance pedestrian safety and walking routes shown on the approved plans and indicated by plan ref's:2005050-02 rev A, 2005050-04 and 2005050-05 shall have been provided and thereafter retained unless otherwise agreed in writing by the Local Planning Authority.

Reason: In the interests of delivering a sustainable development and to ensure the safety of pedestrians and in accordance with HOU5, CCC2 and STR1 of the New Forest District Local Plan Part 1: Planning Strategy 2020.

11. Before first occupation of the dwellings hereby approved, a scheme for the provision of infrastructure and facilities to enable the installation of charging points for electric vehicles to serve each new dwelling shall be submitted to the Local Planning Authority for its written approval. Thereafter, the development shall be implemented in full accordance with the approved details and thereafter retained.

Reason: In the interests of sustainability and to ensure that provision is made for electrical charging points in accordance with Policy IMPL2 of the Local Plan Part 1 Planning Strategy for the New Forest (outside of the National Park).

12. Bin and Bike

Plans and details of bin and bike stores to serve the development shall be submitted to and approved in writing by the Local Planning Authority. The agreed details shall adhere to the adopted standards and be implemented prior to first occupation of the development hereby approved and thereafter maintained and retained for the purposes of bin and bike storage respectively.

Reason. In order to support use of cycles and in the interests of the appearance of the site and ensure sufficient storage provision is made and in accordance with highway safety, ENV3, CCC2 of the New Forest District Local Plan Part 1: Planning Strategy 2020 and the adopted Parking Standards SPD and Waste Collection Strategy.

13. Solar PV

Details of the Solar PV panels, shown illustratively on the approved plans, shall be submitted to and approved in writing by the Local Planning Authority. The approved details shall then be installed and operational prior to occupation of the relevant dwelling. Thereafter they shall be maintained in accordance with the manufacturer's instructions and retained unless otherwise agreed in writing by the Local Planning Authority.

Reason: Due to the Council declared Climate Emergency and in the interests of delivering a sustainable development contributing to reducing the effect of development on climate change and in accordance with the NPPF 2021.

14. Ecology

The works hereby approved shall be undertaken in strict accordance with the Ecosupport Ecological Survey received on 21/09/21 and its mitigation, compensation and enhancement conclusions, which shall be implemented and followed throughout the development and prior to first residential occupation, unless otherwise agreed in writing by the Local Planning Authority.

Reason: To safeguard protected species in accordance with Policies ENV3, ENV4 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside the National Park and Policies DM1, DM2 and DW-E12 of the Local Plan for the New Forest District outside the National Park (Part 2: Sites and Development Management).

15. Surface water drainage

Before development commences, details of the means of sustainably disposing of surface water from the site, including long term management and maintenance regimes, shall be submitted to and approved in writing by the Local Planning Authority. Development shall only take place in accordance with the approved details and the management and maintenance undertaken as agreed and shall be retained unless otherwise agreed in writing by the Local Planning Authority.

Reason: In order to ensure that the drainage arrangements reflect the approved layout, are appropriate and in accordance with Policy ENV3 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park and the New Forest District Council and New Forest National Park Authority Strategic Flood Risk Assessment for Local Development Frameworks.

16. Foul drainage

Prior to the commencement of development, details of the means of disposal of foul water sewerage, including plans of the layout and routing of infrastructure shall be submitted to and approved in writing by the Local Planning Authority. The agreed details shall then be implemented prior to first occupation of the development hereby approved.

Reason: In order to avoid conflict with landscape and ecological constraints on and adjoining the site and in accordance with ENV3 & ENV4 of the New Forest District Local Plan Part 1: Planning Strategy 2020.

17. No development shall start on site until a Construction Environmental Management Plan has been submitted to and approved in writing by the Planning Authority, which shall include:
- (a) Development contacts, roles and responsibilities
 - (b) Public communication strategy, including a complaints procedure.
 - (c) A programme method and phasing of demolition works
 - (d) A programme method and phasing of construction works;
 - (e) The provision of long term facilities for contractor parking;
 - (f) The arrangements for deliveries associated with all construction works;
 - (g) Dust Management Plan (DMP) including suppression, mitigation and avoidance measures to control dust.
 - (h) Wheel washing facilities to be provided.
- (a) Location of temporary site buildings, compounds, construction material, and plant storage areas;
 - (b) Details of parking and traffic management measures.
 - (c) Access and egress for plant and machinery;
 - (d) Protection of pedestrian routes during construction;

All demolition and construction work shall only take place in strict accordance with the approved Construction Environmental Management Plan.

Reason: In order that the Local Planning Authority can properly consider the effect of the works on residential amenity and highway safety and in accordance with Policy ENV3 of the Local Plan Part 1 Planning Strategy.

Planning Committee 11 September 2024

Application Number: 24/10539 Full Planning Permission
Site: 4 WESTGROVE, FORDINGBRIDGE, SP6 1LS
Development: Conversion of attached garage into accommodation ancillary to dwelling with four rooflights
Applicant: Mr & Mrs Campe
Agent: NLH Architects
Target Date: 09/08/2024
Case Officer: Kate Cattermole
Officer Recommendation: Grant Subject to Conditions
Reason for Referral to Committee: Town Council contrary view

1 SUMMARY OF THE MAIN ISSUES

The key issues are:

- 1) Impact on the Fordingbridge Conservation Area
- 2) Use of the extension as ancillary accommodation
- 3) Parking
- 4) Residential amenity
- 5) Trees

2 SITE DESCRIPTION

The application site is located in a small residential cul-de-sac and forms part of a small development of large detached houses with attached garages dating from the 1990s. The site is within the Fordingbridge Conservation Area and built-up area of Fordingbridge.

The application site consists of a large detached house with attached single-storey double garage to the side. The property is situated at the end of the cul-de-sac. To the front of the garage is a paved area providing parking for two cars, and to the south-west of the parking area is a grassed area in front of a side fence enclosing the rear garden. On the edge of the paved area is an established silver birch tree.

3 PROPOSED DEVELOPMENT

The proposal is for the conversion of the attached double garage to ancillary residential use. The alterations to the garage to facilitate this change of use externally would be the addition of four rooflights, changing the garage doors to windows and enlarging the ground floor door on the rear elevation. Internally, a first floor would be installed to create a bedroom. A link to the existing dwellinghouse would be maintained via the utility room.

4 PLANNING HISTORY

Proposal	Decision Date	Decision Description
NFDC/94/54102 Erection of 5 dwellings, attached garages & new access	27/09/1994	Granted Subject to Conditions

5 PLANNING POLICY AND GUIDANCE

Local Plan 2016-2036 Part 1: Planning Strategy

Policy ENV3: Design quality and local distinctiveness

Policy ENV4: Landscape character and quality

Local Plan Part 2: Sites and Development Management 2014

DM1: Heritage and Conservation

DM2: Nature conservation, biodiversity and geodiversity

Built-up Area

Fordingbridge Conservation Area

6 PARISH / TOWN COUNCIL COMMENTS

Fordingbridge Town Council:

Recommend REFUSAL as we question whether this is an annexe as opposed to an individual dwelling and have concerns regarding the loss of the tree.

7 COUNCILLOR COMMENTS

No comments received

8 CONSULTEE COMMENTS

Environmental Health (Contaminated Land):

No concerns

NFDC Tree Team:

No Objection

Environment Agency:

Following the receipt of further information which is satisfactory, the initial objection was withdrawn

9 REPRESENTATIONS RECEIVED

4 letters of representation received (2 as comments and 2 as objections)

Comments:

- Fully meets the needs of the Conservation Area
- Ensure existing and future parking needs can be accommodated off road
- Concerns with impact on the silver birch tree
- Sweatfords Water is closer than identified in Biodiversity Checklist

Objections:

- Alteration to street scene in Conservation Area
- Loss of garage doors to be replaced with brick wall and windows would have significant impact on the street scene
- Set a precedent
- Concern with loss of tree
- The change of the garage to a self-contained unit raises concerns as to how it will be used, and could increase traffic within the road
- No information on additional parking area which would result in loss of green area, and if hard surfacing would increase runoff at times of heavy rain
- Provision of additional parking would alter street scene, and would be compounded by the loss of the existing mature silver birch tree, which is the last remaining tree in West Grove following the removal of willow trees adjacent to 4 & 5 West Grove

10 PLANNING ASSESSMENT

Amended plans were accepted on the 14 August 2024, but as these only corrected fenestration details and provided more details with regard to the silver birch and surfacing of the proposed additional car parking space, they did not require readvertising.

10.1 Principle of Development

As the site is located in the built-up area the principle of the development is acceptable, subject to the consideration of other relevant considerations as set out below

10.2 Street scene

Policy ENV3 requires new development to achieve high quality design that contributes positively to local distinctiveness, quality of life and the character and identity of the locality.

The proposed works to implement this development would not alter the overall form of the existing garage or link to the main dwelling. The changes to the front elevation with the bricking up of the existing garage doors and replacing with windows that would match the windows in the existing house, would not significantly alter the appearance of the building. The proposed rooflights would be flush fitting, so would not be unduly prominent within the roofslope. As such, by reason of the limited changes to the external appearance of the dwelling, the proposal would not be harmful to the street scene, and would not detract from the high quality of the existing development nor be harmful to the local distinctiveness.

10.3 Character and appearance of the Fordingbridge Conservation Area

With respect to any buildings or other land in a Conservation Area, there is a duty placed on the Council under Section 72(1) of the Planning (Listed Buildings and Conservation Areas) Act 1990 to pay special attention to the desirability of preserving or enhancing the character and appearance of that Conservation Area.

Policy DM1 of the Local Plan Part 2 required development proposals to conserve and seek to enhance the historic environments and heritage assets.

The conservation area is a designated heritage asset. Westgrove is a relatively modern development of 5 houses (dating from the 1990s), that were erected in the grounds of a period house, Townend and the dwellings were well detailed reflecting features on the original property. The Fordingbridge Conservation Appraisal notes that Westgrove is a good smaller scheme in the grounds of Townend.

The original consent for the development restricted permitted development rights in respect of new buildings to protect the amenities of the area and safeguard the appearance of the area. However, the wording of this condition does not prevent alterations to the houses, and the windows on 4 Westgrove have been replaced with more modern style windows that lack the detailing of the original.

By reason of the nature of the proposals, these would not alter the overall form of the existing residential dwelling, and the fenestration detailing would match that on the existing house. Furthermore as noted above the proposed rooflights would be flush fitting, so would not be unduly prominent within the roofslope. As such the proposed external alterations to the existing dwelling would be quite limited and would preserve the character and appearance of the Fordingbridge Conservation Area and accord with local and national policy.

The area for the proposed parking is grassed and it is intended to replace this with a gravel surface. As this is a permeable surface these works could be undertaken as permitted development, but as they form part of the proposed plans fall to be considered. This grassed area is quite small in area and has limited benefit to the character and appearance of the Fordingbridge Conservation Area, therefore the replacement of this with gravel would preserve the character and appearance of the conservation area.

10.3 Use of the garage as ancillary living accommodation

A statement has been provided to clarify the proposed use of the ancillary living accommodation: "*The residential annex is intended to provide accommodation for friends and family visiting the existing house. It is designed to offer privacy and independence for guests, allowing them to use the facilities independently from the main house during their stay*". Furthermore, the proposed accommodation would be linked to the main dwellinghouse by a utility room, from which the annexe would be accessed. As such, it is considered that the proposals would function as an annexe and not as an independent self-contained dwelling. However, to ensure the property is retained as a single residential unit, a suitably worded condition is recommended.

10.4 Parking

Policy ENV3 requires the integration of sufficient car parking spaces so that realistic needs are met in a manner that is not prejudicial to the character and quality of the street.

The conversion of the garage would result in the loss of some of the parking provision on the application site. However, this would be offset by the creation of a parking space on the existing grassed area alongside the existing paved area. The amended plans show that the parking area would be laid to gravel and would accommodate a third parking space, which would accord with Parking Standards and therefore should not create unacceptable parking pressures within Westgrove. As the proposed parking area would be laid with a permeable surface, there should not be any issue with water runoff. Furthermore, the replacement of a limited

grassed area by gravel which could be achieved as permitted development, would not create a significant level of harm within the road. As such the proposed additional parking provision would not be prejudicial to the character and quality of the street.

10.5 Residential amenity

Policy ENV3 states that new development will be required to avoid unacceptable effects by reason of visual intrusion or overbearing impact, overlooking, shading, noise and light pollution or other adverse impacts on residential amenity.

The proposed alterations to the existing garage would not alter the overall form of the building nor extend it. As such, the proposed development would not give rise to loss of light, overshadowing or an overbearing impact.

The proposal includes the installation of rooflights on both roofslopes (north and south) to serve the proposed first floor bedroom. The two rooflights on the north roof slope would be facing the existing house, so would not cause any issues. To the south of the application site is a row of terraced houses (1-4 Mill Court) which back onto the side boundary of the application site. The back to back distance between the existing garage and the backs of these properties is approximately 15m, and the rooflights would be serving a first floor. The plans show that the rooflights on the south roofslope are to be obscure glazed and fixed shut, which is considered necessary to ensure the privacy of these adjacent dwellings. To ensure that the restrictions on these rooflights are maintained, an appropriately worded condition can be applied to ensure these are retained in perpetuity to protect the privacy of the neighbouring properties; and as there are two other unrestricted rooflights on the north roofslope, the condition would not adversely impact upon the amenities of the occupants of the converted garage.

The only issue identified with regards to residential amenity is possible overlooking/loss of privacy to 1-4 Mill Court from the rooflights on the south elevation. But this impact could be mitigated by condition, and as such by the nature of the development this would not adversely impact upon residential amenity and therefore accord with Policy ENV3.

10.6 Trees

Policy ENV4 seeks to retain and or enhance landscape features to successfully integrate new development into the local landscape.

The site has a mature Silver Birch tree located on a narrow verge adjacent to the subject property driveway. The tree is within the Fordingbridge Conservation Area, so is afforded a degree of protection - which is a material consideration in the planning process. The Fordingbridge Conservation Appraisal refers to significant trees in the vicinity of the site, but no reference is made to the existing silver birch.

Amended plans have been submitted that show the tree to be retained. By reason of the tree's position between the existing paved driveway and proposed graveled parking area, it is considered the development could be implemented without compromising this tree.

Notwithstanding this, the tree has been identified by the Council's Tree Officer as having limited amenity value - as even though it provides a positive contribution to the immediate vicinity of the residents in the close, its wider presence is limited. The main arboreal focal point of Westgrove from the main public vantage points are the frontage trees adjacent to the access.

Significantly, separate to this application, a tree works application to remove the Silver Birch tree was recently approved on 31 July 2024 (CONS/24/0286) on the grounds that: The birch tree is beginning to lift the driveway to the property and the work detailed in this notification will not have a detrimental impact on the wider conservation area. The Authority could not justify further protection of the tree by a Tree Preservation Order.

As such, given all of these points, the proposed development's impact on the silver birch tree would not form the basis of a sustainable objection or reasonable reason for refusal and as the tree is not considered to be of specific amenity value if it was removed this would not be harmful to the local landscape.

10.7 Ecology

Policy DM2 of the Local Plan Part 2 is aimed at protecting protected species.

Consideration has been given to the locality and the limited scale of the proposed development, and following conversations with the Council's Ecologist, no action is deemed necessary in respect of surveys of the existing building. Due to the limited intervention of the proposed works to the existing building, there would be no threat to protected species and therefore would not be contrary to the policy.

10.8 Flood risk

Even though the dwelling itself is outside a defined flood zone, part of the site is within flood zones 2 and 3, and Sweatfords Water borders the rear garden. The Environment Agency were consulted in respect of the proximity of the development to the watercourse, and they raised an initial objection due to the lack of a flood risk assessment. Following the submission of a satisfactory Flood Risk Assessment, the Environment Agency are now satisfied subject to a condition being attached to ensure the mitigation measures are implemented. Also, a Flood Risk Activity Permit may need to be applied for, due to the proximity of the riverbank, but this is issued directly from the Environment Agency.

10.9 Developer Contributions

As part of the development, subject to any relief being granted, the following amount of Community Infrastructure Levy will be payable:

Type	Proposed Floorspace (sq/m)	Existing Floorspace (sq/m)	Net Floorspace (sq/m)	Chargeable Floorspace (sq/m)	Rate	Total
Dwelling houses	38	27	11	11	£80/sqm	£1,289.54 *

Subtotal:	£1,289.54
Relief:	£0.00
Total Payable:	£1,289.54

11 OTHER MATTERS

None

12 CONCLUSION / PLANNING BALANCE

The proposed development would comply with Policy ENV3 of the Local Plan Part 1 as the proposed works to convert the garage would not detract from the overall form of the existing dwelling and with the use of conditions would not adversely impact upon the amenities of neighbouring properties. Furthermore, the proposed works would conserve the character and appearance of the Fordingbridge Conservation Area, and therefore would comply with policy DM1 and statutory legislation. Other issues in respect of trees, parking, ecology and flood risk have all been considered and the proposed development would not create adverse issues in respect of these matters and comply with policies ENV3, ENV4 of the Local Plan Part 1 and DM2 of the Local Plan Part 2. To conclude, the proposed development would result in an acceptable form of development that would be in accordance with national and local planning policy, and therefore the application is recommended for approval.

13 RECOMMENDATION

Grant Subject to Conditions

Proposed Conditions:

1. The development hereby permitted shall be begun before the expiration of three years from the date of this permission.

Reason: To comply with Section 91 of the Town and Country Planning Act 1990 as amended by Section 51 of the Planning and Compulsory Purchase Act 2004.

2. The development permitted shall be carried out in accordance with the following approved plans:

- 2024-01-PL-004-REV A Existing Elevations East & West as deposited with the Local Planning Authority on 14 August 2024
- 2024-01-PL-005-REV A Existing Elevations North & South as deposited with the Local Planning Authority on 14 August 2024
- 2024-01-PL-101 REV A Proposed Roof Plan as deposited with the Local Planning Authority on 14 August 2024
- 2024-01-PL-103 REV A Proposed Elevations East & West as deposited with the Local Planning Authority on 14 August 2024
- 2024-01-PL-104 REV A Proposed Elevations North & South as deposited with the Local Planning Authority on 14 August 2024
- 2024-01-PL- 001 Site Plan as deposited with the Local Planning Authority on 11 June 2024
- 2024-01-PL-102 Proposed Plans as deposited with the Local Planning Authority on 14 June 2024

Reason: To ensure satisfactory provision of the development.

3. The first floor bedroom rooflights on the south elevation of the approved building shall be:
- (i) obscurely glazed, and
 - (ii) non-opening at all times unless the parts that can be opened are more than 1.7m above the floor,

and the windows shall be retained as such in perpetuity.

Reason: To safeguard the privacy of the adjoining neighbouring properties in accordance with Policy ENV3 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park.

4. The external facing materials shall match those used on the existing building.

Reason: To ensure an acceptable appearance of the building in accordance with Policy ENV3 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park.

5. The development hereby approved shall be used only as ancillary accommodation directly related to occupation of the existing dwelling at 4 Westgrove and shall not, at any time, be subdivided or otherwise occupied as an independent dwelling / residential unit.

Reason: In the interests of certainty regarding the intended uses, the amenities of the area and neighbours and the protection of protected New Forest habitats, in accordance with Policies ENV1 and ENV3 of the New Forest District Local Plan Part 1: Planning Strategy 2020.

6. The development shall be carried out in accordance with the submitted flood risk assessment (ref: Flood Risk Analysis, NLH Architects, 13 August 2024) and the following mitigation measures it details:

- Finished floor levels shall match that of the existing property and shall be no lower than this.

These mitigation measures shall be fully implemented prior to occupation. The measures detailed above shall be retained and maintained thereafter throughout the lifetime of the development.

Reason: To reduce the risk of flooding to the proposed development and future occupants.

7. The development hereby permitted shall not be occupied until the spaces shown on plan PL001A for the parking of motor vehicles have been provided.

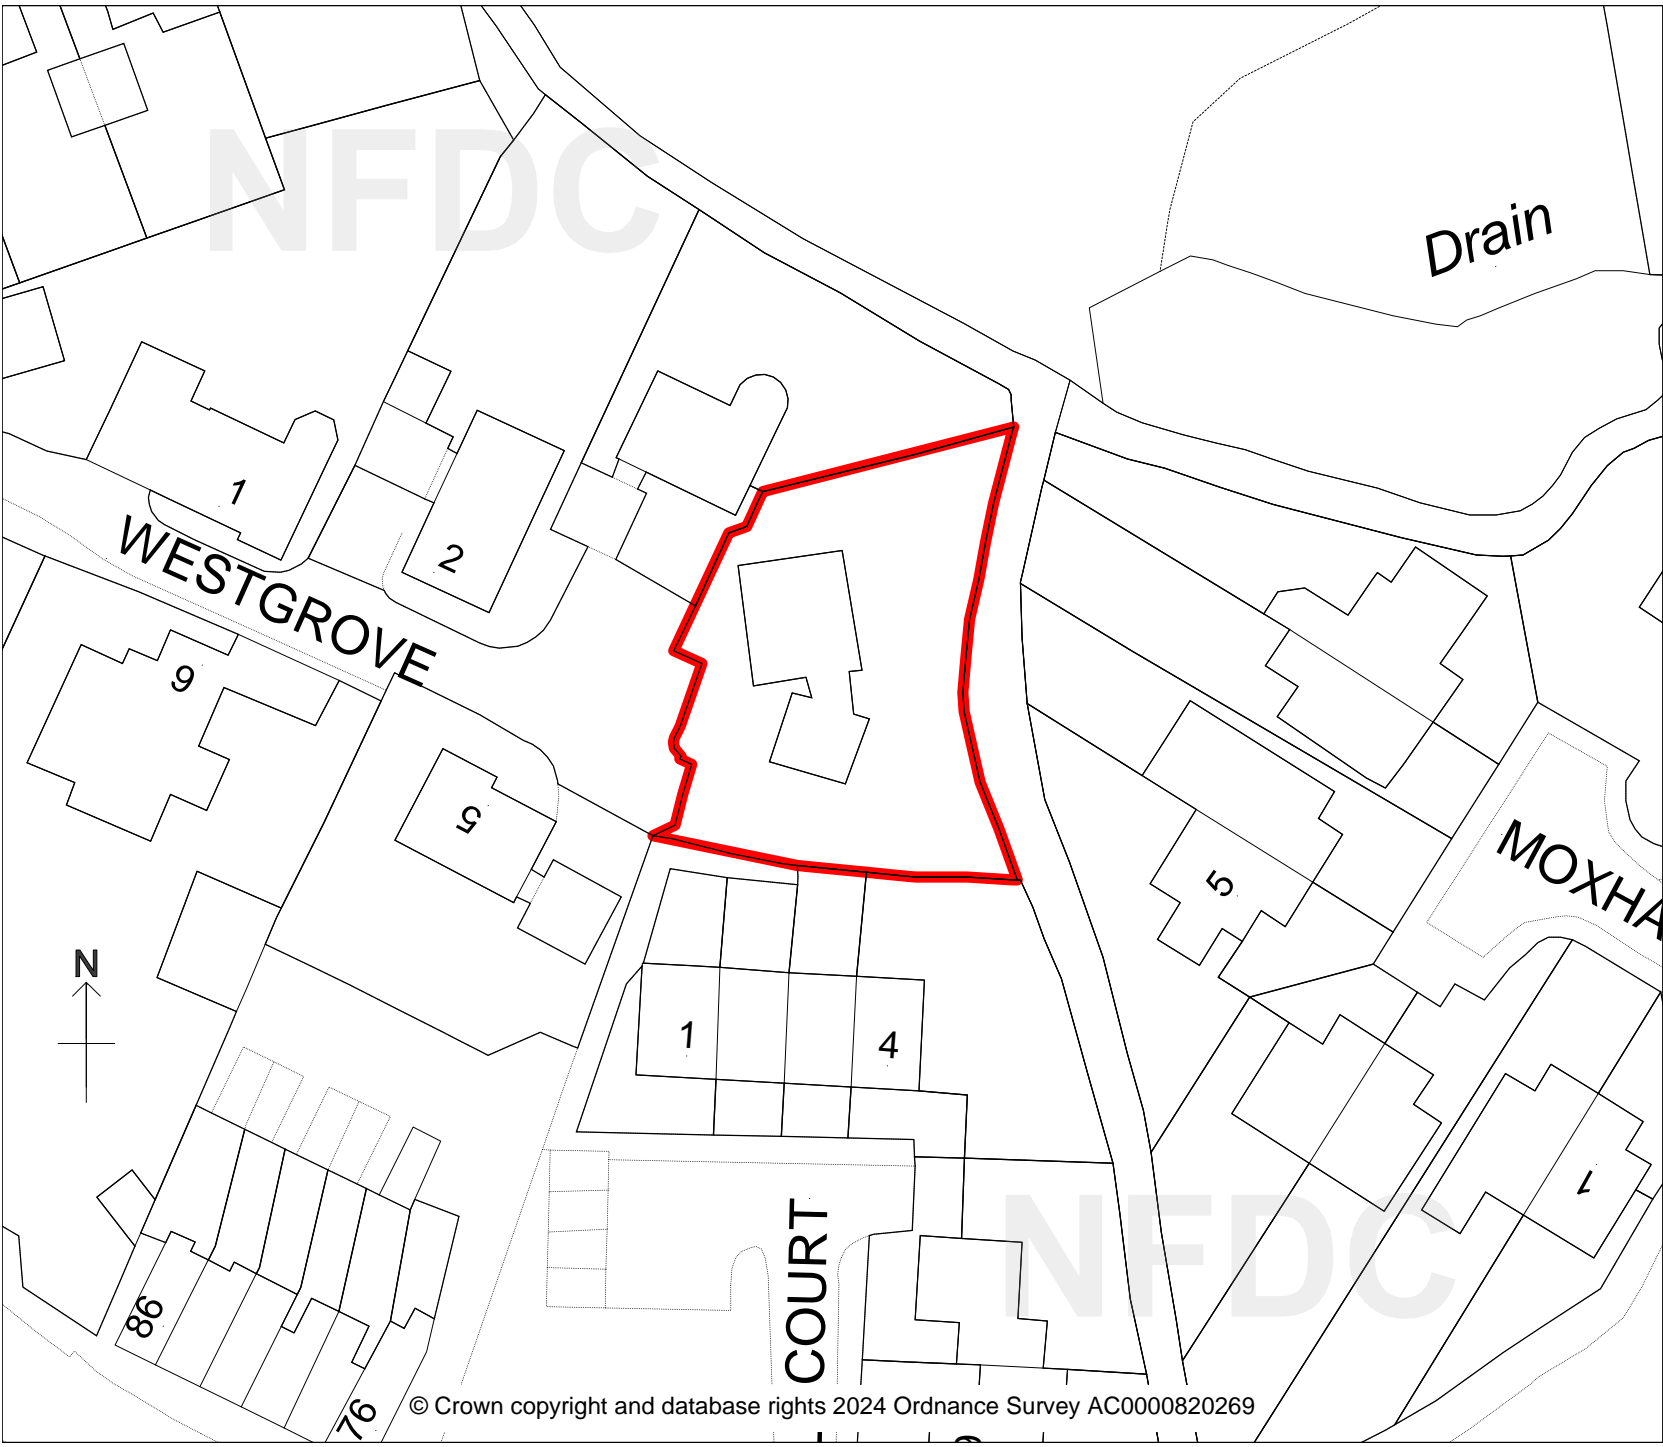

The spaces shown on plan PL001A for the parking of motor vehicles shall be retained and kept available for the parking of motor vehicles for the dwellings hereby approved at all times.

Reason: To ensure adequate parking provision is made in the interest of highway safety and in accordance with Policies ENV3 and CCC2 of the Local Plan 2016-2036 Part One: Planning Strategy for the New Forest District outside of the National Park.
